EW 3153 w

Upper Arm Blood Pressure Monitor

Arm in design with comfortable elbow support and no cuff to wrap!

Wireless display unit

Measure using either arm and place wireless display where you can easily see it. The main unit and wireless display communicate via infrared signals. These signals are sent from the main unit, bounce off your body and are picked up by the wireless device.

Convenient portability of stored data to doctor's office.

AM/PM average systolic comparison

The average systolic blood pressures measured in the morning (when rising) and the night (when going to bed) are displayed simultaneously,

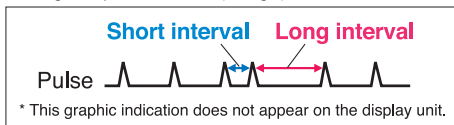

which is useful for detecting the Early Morning Hypertension.

Irregular pulse function

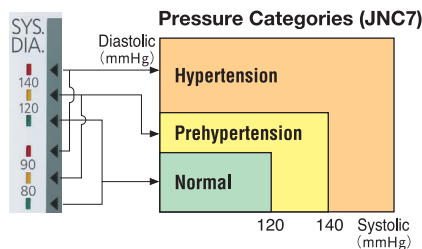

If the unit detects an irregular pulse during the measurement, the  symbol appears after the measurement, so we recommend taking the measurement again.
