

Panasonic Debuts KX-VC500 HD Visual Communications System

Highlights: **Panasonic** System Networks Company of America introduced the new HD Visual Communications System (KX-VC500) at the recent Consumer Electronics Show in Las Vegas. Targeting a variety of industries, including medical, education, manufacturing and general business, the new system improves the collaborative experience with high definition (HD) video and audio among three (3) locations. Panasonic highlights the flexibility of the system since full HD images can be displayed on a wide range of HD monitors, as small as a desktop LCD or as large as a 150-inch HD Plasma or large-screen HD projector. Two HD cameras are included, so that a second camera can zoom-in for detailed images. The system also allows video to be transmitted over the system from laptops connected to the system.

Availability/Compatibility: Panasonic's KX-VC500 Visual Communications System will be available in the spring of 2010 (\$29,000 per site) from an authorized Panasonic partner. The system includes the following components: a Panasonic 50-inch Full HD VIERA Plasma TV, the codec (main system unit), two HD Video Cameras, a 360-degree HD Audio microphone, a VPN Router, a Remote Control and installation and support (on-site and remote support). Currently, the system outputs to HDMI-based monitors. www.panasonic.com/psna
