NAGAIKI Veterinary Hospital

Location: Setagaya-ku, Tokyo

NAGAIKI Veterinary Hospital pays close attention to ensuring excellent air quality. For Toshiya Koba, director of the hospital, who knew about the effectiveness and safety of hypochlorous acid from an early stage, ziaino® was the product he had been waiting for.

NAGAIKI Veterinary Hospital

Toshiya Koba, Director of NAGAIKI Veterinary Hospital

Challenge: To become a hospital with excellent air quality

Aiming for thorough hygiene management, NAGAIKI Veterinary Hospital has been using hypochlorite since first opening its doors. While initially it used medical-use bleach containing diluted sodium hypochlorite, around 20 years ago it introduced 2 machines that can generate hypochlorous acid, creating a safer system for improved disinfection and deodorisation. With more benefits than alcohol disinfectant, and safe to use with both humans and animals, the hospital had been using hypochlorous acid in various ways, including in sprays, as a hand cleanser prior to treating animals, and for cleaning animals' mouths and bodies.

At the same time, it had installed ventilation equipment in its waiting and treatment rooms to ensure a constant flow of fresh, clean air, and built positive pressure cleanrooms. With thorough hygiene management measures in place and a knowledge of the benefits of hypochlorous acid, the hospital had long been aware of ziaino®, and introduced a ziaino® product into its waiting room.

Solution: Simple hygiene management through introduction of ziaino®

ziaino® sucks in dirty air, cleaning it with hypochlorous acid within the unit, before releasing the purified air back into the room. Koba has noticed how this air treatment cycle ensures a constant flow of purified air within the hospital. He has also been incredibly impressed at how the unit does everything from automatically generating hypochlorous acid to vaporizing it and releasing it into the air.

Koba says, "During the pandemic, we paid special attention to the air environment and hygiene management, such as frequently measuring CO₂ concentration level in the waiting room. Our plan is to continue using ziaino® to provide a hygienic air environment for those visiting the hospital. ziaino® is a high-profile product in Japan, so from a management perspective, there are huge benefits for us if customers can see we are using ziaino® and know we strive to ensure excellent air quality."

Product installed:

ziaino® Air Treatment Unit (1 units)

*Deodorising effect depends on the ambient environment (temperature and humidity), operation time, and type/degree of odour.
