Thank you for purchasing a Panasonic appliance.

Important Safety Instructions:

Before operating this oven, please read these instructions and precautions carefully and keep for future reference.

Important safety instructions

1. **WARNING:** The door seals and seal areas should be cleaned with a damp cloth.
The appliance should be inspected for damage to the door seals and door seal areas and if these areas are damaged the appliance should not be operated until it has been repaired by a service technician trained by the manufacturer.
2. **WARNING:** Liquids and other foods must not be heated in sealed containers since they are liable to explode.
3. **WARNING: WHEN YOUR OVEN REQUIRES SERVICING,** call your local Panasonic engineer (Customer Support). It is hazardous for anyone other than a competent person to carry out any service or repair operation which involves the removal of a cover which gives protection against exposure to microwave energy.
2. Do not operate this appliance if it has a damaged CORD OR PLUG, if it is not working properly, or if it has been damaged or dropped. It is dangerous for anyone other than a service technician trained by the manufacturer to perform repair service.
3. If the supply cord is damaged, it must be replaced by the manufacturer, its service agent or similarly qualified person in order to avoid a hazard.
4. This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety. Children should be supervised to ensure that they do not play with the appliance.

CAUTION

1. Do not attempt to tamper with or make any adjustments or repairs to the door, control panel housing, safety interlock switches or any other part of the oven. Do not remove the outer panel from the oven which gives protection against exposure to microwave energy. Repairs should only be done by a qualified service person.
5. The microwave oven is intended for heating food and beverages. Drying of food, newspaper or clothing and heating of warming pads, slippers, sponges, damp cloth and similar may lead to risk of injury, ignition or fire.
6. Before use, check that utensils/containers are suitable for use in microwave ovens.
7. The oven will only operate with the door closed.

8. When the oven is not being used, do not store any objects other than oven accessories inside the oven in case it is accidentally turned on.
9. The appliance shall not be operated **WITHOUT FOOD IN THE OVEN**.
Operation in this manner may damage the appliance.
10. If smoke or a fire occurs in the oven, press Stop/Reset and leave the door closed in order to stifle any flames.
Disconnect the power cord, or shut off the power at the fuse or the circuit breaker panel.
11. The oven lamp must be replaced by a service technician trained by the manufacturer. Do not attempt to remove the outer casing from the oven.

Installation

Examine your microwave oven

Unpack the oven, remove all packing material, and examine the oven for any damage such as dents, broken door latches or cracks in the door. If you find any damage, notify your dealer immediately. Do not install a damaged microwave oven.

Earthing Instructions

IMPORTANT: THIS UNIT HAS TO BE PROPERLY EARTHED FOR PERSONAL SAFETY.

If your AC outlet is not earthed, it is the personal responsibility of the customer to have it replaced with a properly earthed wall socket.

Operation Voltage

The voltage has to be the same as specified on the label on the oven. If a higher voltage than specified is used, it may cause a fire or other damages.

Placement of the oven

This appliance is intended to be used in household and similar applications such as:

- staff kitchen areas in shops, offices and other working environments;
- farm houses;
- by clients in hotels, motels and other residential environments;
- bed and breakfast type environments.

1. Place the oven on a flat and stable surface, more than 85 cm above the floor.

The appliance is freestanding type and shall not be placed in a cabinet.

2. When this oven is installed, it should be easy to isolate the appliance from the electricity supply by pulling out the plug or operating a circuit breaker.
3. For proper operation, ensure a sufficient air circulation for the oven.

Counter-top use:

- a. Allow 15 cm of space on the top of the oven, 10 cm at the back and on 5 cm both sides.
- b. If one side of the oven is placed flush to a wall, the other side or top must not be blocked.

Important safety instructions

4. Do not place this oven near an electric or gas cooker range.
 5. The feet should not be removed.
 6. This oven is only for household usage. Do not use outdoors.
 7. Avoid using the microwave oven in high humidity.
 8. The power cord should not touch the outside of the oven. Keep the cord away from hot surfaces. Do not let the cord hang over the edge of a table or work top. Do not immerse the cord, plug or oven in water.
 9. Do not block the air vents. If these openings are blocked during operation the oven may overheat. In this case the oven is protected by a thermal safety device and resumes operation only after cooling down.
 10. When it becomes necessary to replace the oven light, please consult your dealer.
- If you accidentally remove the roller ring, place the roller ring gently into the hole in the centre of the oven and locate it on the spindle beneath. Flat processing is applied on the spindle to firmly hold the roller ring during operation.

Glass tray

- Always operate the oven with the roller ring and glass tray in place.
- Only use the glass tray specifically designed for this oven. Do not substitute with any other glass tray.
- If the glass tray is hot, let it cool before cleaning or placing in water.
- The glass tray can turn in either direction.
- If the food or cooking vessel on the glass tray touches the oven walls and stops the tray rotating, the tray will automatically rotate in the opposite direction. This is normal. Open oven door, reposition the food and restart.
- Do not cook foods directly on the glass tray. Always place food in a microwave safe dish.
- While cooking, the glass tray may vibrate. This will not affect cooking performance.

Accessories

The oven comes equipped with a variety of accessories. Always follow the directions given for use of the accessories.

Roller ring

- Do not remove the roller ring from the cavity floor.
- The roller ring and the oven floor should be cleaned frequently to prevent noise and build-up of remaining food.
- The roller ring must always be used for cooking together with the glass tray.

Important

If the recommended cooking time is exceeded, the food will be spoiled and in extreme circumstances could catch fire and possibly damage the interior of the oven.

Short cooking time

As microwave cooking time is much shorter than other cooking methods, it is essential that recommended cooking time is not exceeded without first checking the food.

Factors that may affect cooking time are: preferred degree of cooking, starting temperature, altitude, volume, size and shape of foods and utensils used. As you become familiar with the oven, you will be able to adjust these factors.

It is better to undercook rather than overcook foods. If food is undercooked, it can always be returned to the oven for further cooking. If food is overcooked, nothing can be done. Always start with minimum cooking time.

Small quantities of food

Take care when heating small quantities of food as these can easily burn, dry out or catch fire if cooked too long. Always set short cooking time and check the food frequently.

Foods low in moisture

Take care when heating foods low in moisture, e.g. bread items, chocolate, popcorn, biscuits and pastries. These can easily burn, dry out or catch on fire if cooked too long. We do not recommend heating foods low in moisture such as popcorn or bread.

This oven has been developed for food use only.

We do not recommend to use for heating non food items such as wheat bags or hot water bottles.

Reheating

It is essential that reheated food is served "piping hot".

Remove the food from the oven and check that it is "piping hot", i.e. steam is being emitted from all parts and all sauce is bubbling. (You may choose to check the food has reached 72 °C with a food thermometer – but remember do not use this thermometer inside the microwave.)

For foods that cannot be stirred, e.g. lasagne, shepherds pie, the centre should be cut with a knife to test it is well heated through. Even if a manufacturer's packet instructions have been followed always check the food is piping hot before serving and if in doubt return your food to the oven for further heating.

Standing time

Standing time refers to the period at the end of cooking or reheating when food is left before being eaten, i.e. it is a rest time which allows the heat in the food to continue to conduct to the centre, thus eliminating cold spots.

Important safety instructions

Lids

Always remove the lids of jars and containers and takeaway food containers before you microwave the food. If the lid remains, then steam and pressure might build up inside and cause an explosion even after the microwave cooking has stopped.

Babies bottles and food jars

When reheating babies bottles always remove top and teat. Liquid at the top of the bottle will be much hotter than that at the bottom and must be shaken thoroughly before checking the temperature. This should be carried out before consumption to avoid burns. See page 27.

Boiled eggs

Eggs in their shell and whole hard-boiled eggs should not be heated in microwave ovens since they may explode even after microwave heating has ended.

Foods with skins

Potatoes, apples, egg yolk, whole vegetables and sausages are examples of food with non porous skins. These must be pierced using a fork before cooking to prevent bursting.

Paper and plastic

When heating food in plastic or paper containers, keep an eye on the oven due to the possibility of ignition. Do not use wire twist-ties with roasting bags as arcing will occur.

Do not use re-cycled paper products, e.g. Kitchen roll unless they say they are specifically designed for use in a microwave oven. These products contain impurities which may cause sparks and/or fires when used.

Liquids

Microwave heating of beverages can result in delayed eruptive boiling, therefore care should be taken when handling the container. To prevent the possibility of sudden boil the following steps should be taken:

- a) Avoid using straight-sided containers with narrow necks.
- b) Do not overheat.
- c) Stir the liquid before placing the container in the oven and again halfway through the heating time.
- d) After heating, allow to stand in the oven for a short time, stirring again before carefully removing the container.

Deep fat frying

Do not attempt to deep fat fry in your oven.

Arcing

Arcing may occur accidentally if a metal container has been used or the incorrect weight of food is used. Arcing is flashes of blue light seen in the microwave oven. If this occurs, stop the machine immediately. If the oven is left unattended and this continues it can damage the machine.

Meat thermometer

Use a meat thermometer to check the degree of cooking of joints and poultry only when meat has been removed from the microwave. If undercooked, return to the oven and cook for a few more minutes at the recommended power level. Do not leave a conventional meat thermometer in the oven when microwaving.

General guidelines

STANDING TIME

Dense foods e.g. meat, jacket potatoes and cakes, require standing time (inside or outside of the oven) after cooking, to allow heat to finish conducting to the centre of the food to cook through completely. Wrap meat joints and jacket potatoes in aluminium foil while standing. Meat joints need approx. 10–15 minutes, jacket potatoes 5 minutes. Other foods such as plated meals, vegetables, fish etc. require 2–5 minutes standing. If food is not cooked after standing time, return to the oven and cook for additional time. After defrosting food, standing time should also be allowed.

QUANTITY

Small quantities cook faster than large quantities, and small meals will reheat more quickly than large portions.

SPACING

Foods cook more quickly and evenly if spaced apart. NEVER pile foods on top of each other.

MOISTURE CONTENT

Many fresh foods e.g. vegetables and fruit, vary in their moisture content throughout the season. For this reason cooking time may have to be adjusted. Dry ingredients e.g. rice, pasta, can dry out during storage so cooking time may differ.

PIERCING

The skin or membrane on some foods will cause steam to build up during cooking.

These foods must be pierced or a strip of skin should be peeled off before cooking to allow the steam to escape. Eggs, potatoes, apples, sausages etc, will all need to be pierced before cooking. **DO NOT ATTEMPT TO BOIL EGGS IN THEIR SHELLS.**

COVERING

Cover foods with microwave cling film or a lid. Cover fish, vegetables, casseroles, soups. Do not cover cakes, sauces, jacket potatoes or pastry items.

DENSITY

Porous airy foods heat more quickly than dense heavy foods.

General guidelines

CLING FILM

Cling film helps keep the food moist and the trapped steam assists in speeding up cooking time. Pierce before cooking to allow excess steam to escape. Always take care when removing cling film from a dish as the build-up of steam will be very hot.

SHAPE

Even shapes cook evenly. Food cooks better by microwave when in a round container rather than square.

STARTING TEMPERATURE

The colder the food, the longer it takes to heat up. Food from a fridge takes longer to reheat than food at room temperature.

LIQUIDS

All liquids must be **STIRRED BEFORE, DURING AND AFTER** heating. Water must be stirred before and during heating, to avoid eruption. Do not heat liquids that have previously been boiled. **DO NOT OVERHEAT.**

TURNING AND STIRRING

Some foods require stirring during cooking. Meat and poultry should be turned after half of the cooking time.

ARRANGING

Individual foods e.g. chicken portions or chops, should be placed on a dish so that the thicker parts are towards the outside.

CHECKING FOOD

It is essential that food is checked during and after a recommended cooking time, even if an **AUTO PROGRAMME** has been used (just as you would check food cooked in a conventional oven). Return the food to the oven for further cooking if necessary.

DISH SIZE

Follow the dish sizes given in the recipes, as these affect the cooking and reheating times.

A quantity of food spread in a bigger dish cooks and reheats faster.

CLEANING

As microwaves work on food particles, keep your oven clean at all times. Stubborn spots of food can be removed by using a microwave spray cleaner, sprayed onto a soft cloth. Always wipe the oven dry after cleaning.

Containers to use

Choosing the correct container is a very important factor in deciding the success or failure of your cooking.

OVEN GLASS

Glass that is heat resistant e.g. Pyrex®, is ideal, and can be used.

Do not use glass which may crack due to the heat from the food. Do not use lead crystal which may crack or arc.

CHINA AND CERAMIC

Glazed china plates, saucers, bowls, mugs and cups can be used if they are heat resistant.

Porcelain and ceramic are also ideal. Fine bone china should only be used for reheating for short period of time, otherwise the change in temperature may crack the dish or craze the finish. Do not use dishes with a metal rim or pattern. Do not use jugs or mugs with glued handles, since the glue can melt in a microwave.

POTTERY, EARTHENWARE, STONEWARE

Only use if completely glazed. Do not use if partially glazed or unglazed, as they are able to absorb water which will absorb microwave energy, making the container very hot and slowing down the cooking of food.

FOIL/METAL CONTAINERS

NEVER ATTEMPT TO COOK IN FOIL OR METAL containers – the microwaves cannot pass through and the food will not heat evenly – this may also damage your oven. Use wooden kebab sticks instead of metal skewers.

CLING FILM

Use microwave cling film to cover food that is to be reheated, or cooked, ON MICROWAVE ONLY taking care to avoid the film being in direct contact with the food.

Containers to use

PLASTIC

Many plastic containers are designed for microwave use. Only use containers if they are designed for microwave use. Do not use Melamine as it will scorch. Do not use plastic for cooking foods high in sugar or fat or foods that require long cooking time e.g. brown rice. Never cook in margarine containers or yogurt pots, as these will melt with the heat from the food.

PAPER

Plain white kitchen paper (kitchen towel) can be used for covering blind pastry cases and for covering sausage to prevent splattering **ONLY USE FOR SHORT COOKING TIME. NEVER RE-USE A PIECE OF KITCHEN TOWEL.** Avoid kitchen paper containing manmade fibers. Check that branded re-cycled kitchen towel is recommended for microwave use. Do not use waxed or plastic coated cups as the finish may melt in the oven. Greaseproof paper can be used to line the base of dishes and to cover fatty foods. White paper plates can be used for **SHORT REHEATING TIMES, ON MICROWAVE ONLY.**

WICKER, WOOD, STRAW BASKETS

Do not use these items in your microwave. With continued use and with prolonged exposure they will crack and could ignite.

ALUMINIUM FOIL

Small amounts of smooth aluminium foil can be used to **SHIELD** joints of meat during defrosting. As the microwaves cannot pass through the foil this prevents the shielded parts from overcooking or overdefrosting. The foil must not touch the sides or roof of the oven, as this may cause arcing and damage your oven.

ROASTING BAGS

These are useful when slit up one side to tent a joint of meat when roasting by power and time. **DO NOT USE THE METAL TWISTS SUPPLIED.**

Parts of your oven

1. Door Release Button

Press to open the door. Opening the door during cooking will stop the cooking process without cancelling the programme. It is quite safe to open the door at any time during a cooking programme and there is no risk of microwave exposure. For NN-SM33NW, cooking resumes as soon as the door is closed. For NN-ST34NB, cooking resumes after the door is closed and Start/Set is pressed.

2. Oven window

3. Air vent

4. Microwave feed guide (Do not remove.)

5. External air vents

6. Control panel

7. Power supply cord

8. Plug

9. Glass tray

10. Roller ring

11. Menu label (NN-ST34NB only)

Identification and caution labels are attached on the oven.

■ Note

This illustration is for reference only.

Control panel

1 Cooking mode select dial

2 Defrost power

3 Microwave power

4 Time/weight select dial

- Your control panel may have differences in appearance, but the words on the pads and functionality will be the same.

Microwave cooking and defrosting

The glass tray must always be in position when using the oven.

Turn the dial to select the desired power level.

Turn the dial to set the cooking time for microwave cooking, or to set the weight of food for defrosting.

For short cooking time, turn the dial past 5 minutes and then adjust to the time required.

For the weight less than 0.2 kg, turn the dial past 0.2 kg and then adjust to the weight required.

Power Level	Example of Use
High	Boil water. Cook fresh fruit, vegetables, rice, pasta and noodles.
Med-High	Cook poultry, meat, cakes and desserts. Heat milk.
Medium	Cook eggs, cheeses, fish, pot roasts, casseroles and meat loaves. Melt chocolate.
Defrost	Thaw foods.
Low	Keep cooked foods warm, simmer slowly.

Notes

1. If the door is already closed, the oven will start cooking/defrosting immediately.
2. If you wish to check the food during cooking simply open the door. The oven will automatically stop cooking. To continue cooking, close the door.
3. To stop cooking, turn Time/Weight Select dial to zero position. Cooking time can be reset at any time during the cooking cycle by turning the dial.
4. When food is removed from the oven after cooking is complete, check the Time/Weight Select dial is in the zero position.
5. Around half of defrosting time, turn over the food, remove the defrosted part/food, or shield thin ends/fat/bones of roast with foil. Refer to Defrosting guidelines on page 22 for details.

NN-ST34NB

Control panel

- 1 Display window
- 2 Micro Power pad
- 3 Auto Defrost pad
- 4 Auto Menu pad
- 5 Time pads
- 6 Timer/Clock pad
- 7 Quick 30 pad
- 8 Up/Down pads

9 Stop/Reset pad Before Cooking

One press clears your instructions.

During Cooking

One press temporarily stops the cooking process. Another press cancels all your instructions and a dot or the time of day will appear in the display.

10 Start/Set pad

One press allows oven to begin operation. If door is opened or Stop/Reset is pressed once during oven operation, Start/Set must be pressed again to restart oven.

- Your control panel may have differences in appearance, but the words on the pads and functionality will be the same.

■ Beep sound

When a pad is pressed correctly a beep will be heard. If a pad is pressed and no beep is heard, the unit has not or cannot accept the instruction. The oven will beep twice between programmed stages. At the end of any complete programme, the oven will beep 5 times.

■ Note

If Start/Set is not pressed for 6 minutes after cooking programme setting, the oven will automatically cancel the cooking programme. The display will revert back to clock or dot.

NN-ST34NB

Setting the clock

When the oven is plugged in for the first time, “88.88” appears in display.

■ Notes

1. To reset time of day, repeat the whole step above.
2. The clock will keep the time of day as long as the oven is plugged in and electricity is supplied.
3. This is a 12 hour clock.

NN-ST34NB

Child safety lock

This feature will make the oven controls inoperable; however, the door can be opened. Child safety lock can be set when the display shows a dot or the time.

To Set:

Press Start/Set 3 times within 10 seconds.
The clock will disappear. Actual time will not be lost. “Child” is indicated in the display.

To Cancel:

Press Stop/Reset 3 times within 10 seconds.
The clock will reappear in the display.

Microwave cooking and defrosting

The glass tray must always be in position when using the oven.

Press Micro Power to select the desired power level.

Set the cooking time.
Refer to “Setting the cook time/timer time” on page 17.

Press Start/Set.
The time counts down in the display.

Press	Power Level	Max. time available	Example of Use
once	High	30 minutes	Boil water. Cook fresh fruit, vegetables, rice, pasta and noodles.
twice	Med-High	99 minutes 50 seconds	Cook poultry, meat, cakes and desserts. Heat milk.
3 times	Medium	99 minutes 50 seconds	Cook eggs, cheeses, fish, pot roasts, casseroles and meat loaves. Melt chocolate.
4 times	Defrost	99 minutes 50 seconds	Thaw foods.
5 times	Low	99 minutes 50 seconds	Keep cooked foods warm, simmer slowly.

■ Notes

1. The oven will automatically work on High microwave power if a cooking time is entered without the power level previously being selected.
2. While cooking, the glass tray may vibrate. This will not affect cooking performance.
3. For MULTI-STAGE COOKING, refer to page 18.
4. STANDING TIME can be programmed after microwave power and time setting. Refer to page 20.
5. DO NOT cook with any metal accessory in the oven.
6. Always check the food during defrosting by opening the door then restarting. It is not necessary to cover food during defrosting. To ensure an even result, stir, turn or separate several times during defrosting. For large joints and poultry, turn halfway through defrosting and protect ends and tips with foil. Refer to Defrosting guidelines on page 22 for details.
7. When the microwave oven is operated at High microwave power for long time, the microwave oven automatically adjust the power to protect the components of the microwave oven.

■ Setting the cook time/timer time

When you set the cook time or the timer time, use following keys according to your needs.

Press each Time pad repeatedly according to the time value you want to set.

Press Quick 30 to set cooking time in 30 seconds increments.

After you enter a time value with each Time pad or Quick 30, you can adjust the time values with the Up/Down pads.

■ Note

The maximum cooking time you can set with the Quick 30 is total of 5 minutes for each cooking stage.

Multi-stage cooking

This feature allows you to programme up to 3 stages of cooking continuously.

Example: To continually set High power for 2 minutes, Medium power for 3 minutes and Low power for 2 minutes.

* Refer to "Setting the cook time/timer time" on page 17.

■ Notes

1. AUTO PROGRAMMES cannot be used with MULTI-STAGE COOKING.
2. When operating, 2 beeps will sound between each stage, and 5 beeps will sound after all stages have finished.
3. High MICROWAVE power can be set only once in MULTI-STAGE COOKING.

NN-ST34NB

Quick 30 feature

This feature allows you to set cooking time in 30 seconds increments up to 5 minutes at High power.

Press **Quick 30** until the desired cooking time appears in the display.

Press **Start/Set**. The time counts down in the display.

■ Note

You can select other power level if you need. Select the desired power level before pressing Quick 30.

NN-ST34NB

Add time feature

This feature allows you to add cooking time during cooking.

During cooking, press **1 min** or **10 sec**. Cooking time will be added up to 5 minutes.

■ Notes

1. In MULTI-STAGE COOKING, you can add cooking time up to 5 minutes in every stage.
2. ADD TIME feature is not available for AUTO PROGRAMMES.

Using the timer

This feature operates as a KITCHEN TIMER or allows you to programme the STANDING TIME/DELAY START.

Kitchen timer

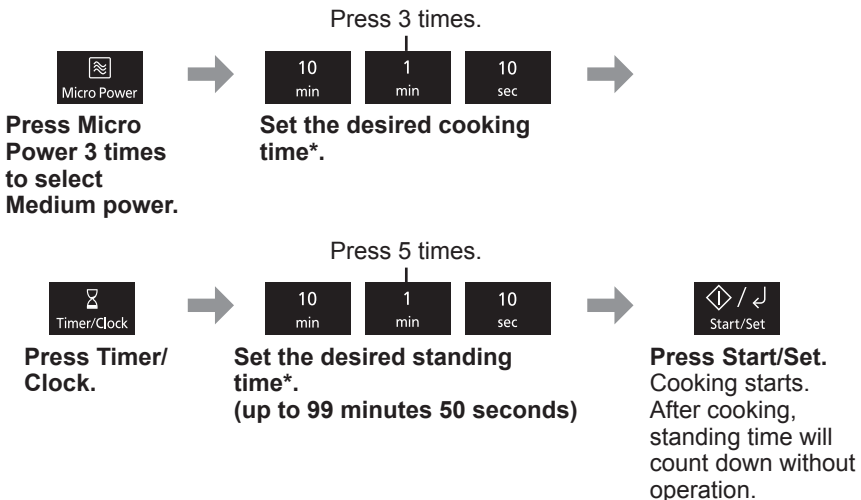

Example: To count 5 minutes.

* Refer to “Setting the cook time/timer time” on page 17.

Standing time

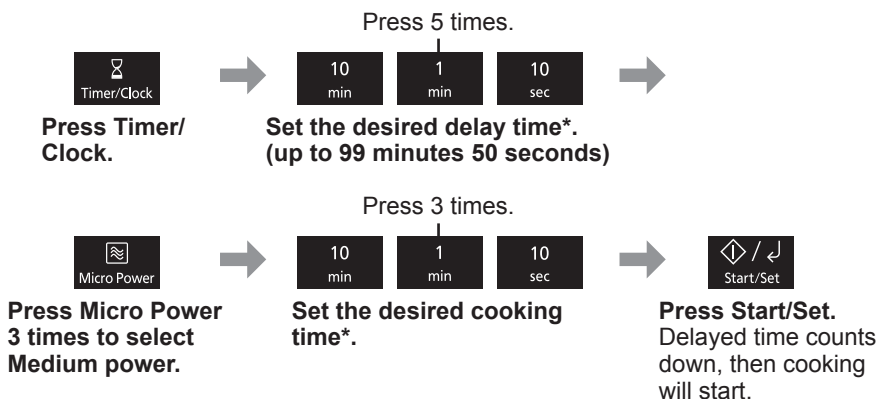

Example: To stand for 5 minutes after cooking at Medium power for 3 minutes.

* Refer to “Setting the cook time/timer time” on page 17.

Delay start

Example: To start cooking at Medium power for 3 minutes after 5 minutes of standing time.

* Refer to "Setting the cook time/timer time" on page 17.

■ Notes

1. MULTI-STAGE COOKING can be programmed including STANDING TIME or DELAY START.
2. Even if the oven door is opened during KITCHEN TIMER, STANDING TIME or DELAY START, the time in the display window will continue to count down.
3. STANDING TIME/DELAY START cannot be programmed before/after any AUTO PROGRAMME.

Auto programmes

With this feature you can defrost/reheat/cook food according to the weight. Select the category and set the weight of the food. The weight is programmed in kilograms for AUTO DEFROST and in grams for AUTO MENU. The oven determines MICROWAVE power level and cooking time automatically. For quick selection, the weight starts from the most commonly used weight for each category. Do not include the weight of any added water or the container weight.

■ Notes

1. Always operate the oven with the roller ring and glass tray in place.
2. The AUTO PROGRAMMES must ONLY be used for foods described.
3. Only defrost/cook foods within the weight ranges described.
4. Always weigh the food rather than relying on the package information.
5. Most foods benefit from a STANDING TIME. After cooking with an AUTO PROGRAMME, allow heat to continue conducting to the centre.

Auto defrost

Press Auto Defrost.

Set the weight of the frozen food.
The weight counts up/down in 0.1 kg increments.

Press Start/Set.
The time counts down in the display.

Food	Maximum Weight
Minced meat, chicken pieces, chops	2.0 kg
Beef roast, lamb, whole chicken	2.0 kg
Whole fish, scallops, prawns, fish fillets	1.0 kg

Defrosting guidelines

For best results:

1. Place foods in a suitable container. Meat joints and chicken should be placed on an upturned saucer.
2. Check food during defrosting, as foods vary in their defrosting speed.
3. It is not necessary to cover the whole food (see point 6).
4. Always turn or stir the food especially when the oven “beeps”. Shield if necessary (see point 6).
5. Minced meat, chops and other small items should be broken up or separated and placed in a single layer.

- Shielding prevents food from cooking. It is essential when defrosting chicken and joints of meat.
The outside thaws out first, so protect wings/breast and fat with smooth pieces of aluminium foil secured with cocktail sticks.
- Allow standing time so that the centre of the food thaws out (minimum of 1 hour for joints of meat and whole chicken).

Arrange food in a single layer.

Turn or break up food as soon as possible.

Shield chicken and joints of meat.

Auto menu

Select the desired Auto Menu programme*.

The AUTO PROGRAMME number appears in the display.

Press Start/Set to confirm the setting.

Set the desired serving or food weight.

Press Start/Set.
The time counts down in the display.

* After press the Auto Menu pad, you can also use the Up/Down pads to select the Auto Menu programme.

■ Note

As some variations may occur in food, check that food is thoroughly cooked and piping hot before serving.

Programme	Instructions
1. Auto Reheat  1 press	<p>Weight: 200/400/600/800 g</p> <p>Precooked foods are reheated automatically by setting the food's weight. The foods should be at refrigerator temperature (5-8 °C). Use suitable size microwave safe casserole, add 1-4 tbsp of water if desired, and cover with lid. Place the casserole on glass tray. Press Auto Menu once and press Start/Set. Set the weight of the food and press Start/Set. Stir at beeps.</p> <p>Note: When reheating items such as soups, stews, and casseroles, it is recommended that they are stirred at half of reheating time and at completion of reheating.</p>

Auto programmes

Programme	Instructions									
<p>2. Reheat Fried Rice</p>  2 presses	<p>Serving: 1 serv./2 serv. (250 g/serving) For reheating a pre-cooked fried rice. It must be pre-cooked. Fried rice should be at room temperature or refrigerator temperature approx. +5 °C. Reheat in container as purchased. Covering film with a sharp knife once in the centre and 4 times around the edge. Place container on glass tray. Press Auto Menu twice and press Start/Set. Set the serving and press Start/Set. Allow a few minutes standing time. This programme is not suitable for frozen fried rice/uncooked foods.</p>									
<p>3. Congee/Porridge</p>  3 presses	<p>Weight: 50/100/150 g</p> <table border="1" data-bbox="620 523 999 644"> <thead> <tr> <th>Rice</th> <th>Recommended Water</th> </tr> </thead> <tbody> <tr> <td>50 g</td> <td>250-400 ml</td> </tr> <tr> <td>100 g</td> <td>600-800 ml</td> </tr> <tr> <td>150 g</td> <td>800-1000 ml</td> </tr> </tbody> </table>	Rice	Recommended Water	50 g	250-400 ml	100 g	600-800 ml	150 g	800-1000 ml	<p>Place the rice in a suitable size microwave safe casserole. Add recommended water listed above. Allow at least ½ depth of volume for evaporation to prevent boiling over. During cooking, partially cover with lid. Place the casserole on glass tray. Press Auto Menu 3 times and press Start/Set. Set the weight of the food and press Start/Set. Stir at beeps.</p>
Rice	Recommended Water									
50 g	250-400 ml									
100 g	600-800 ml									
150 g	800-1000 ml									
<p>4. Cooking and reheating guidelines

Most foods reheat very quickly in your oven by HIGH power. Meals can be brought back to serving temperature in just minutes.

Always check food is piping hot and return to oven if necessary.

As a general rule, always cover wet foods, e.g. soups, casseroles and plated meals.

Do not cover dry foods e.g. bread rolls, mince pies, sausage rolls, etc.

Remember when cooking or reheating any food that it should be stirred or turned wherever possible. This ensures even cooking or reheating on the outside and in the centre.

MINCE PIES - CAUTION

REMEMBER even if the pastry is cold to the touch, the filling will be piping hot and will warm the pastry through. Take care not to overheat otherwise burning can occur due to the high fat and sugar content of the filling. Check the temperature of the filling before consuming to avoid burning your mouth.

PUDDINGS AND LIQUIDS - CAUTION

Puddings and other foods high in fats or sugar, e.g. jam, mince pies, must not be over heated. These foods must never be left unattended as with over cooking these foods can ignite. Take great care when reheating these items.

Do not leave unattended.

BABIES BOTTLES - CAUTION

Milk or formula **MUST** be shaken thoroughly before heating and again at the end and tested carefully before feeding a baby.

For 200–240 ml of milk from fridge temperature, remove top and teat. Heat on HIGH power for 30–50 sec.
CHECK CAREFULLY BEFORE FEED.

For 90 ml of milk from fridge temperature, remove top and teat. Heat on HIGH power for 15–20 sec.
CHECK CAREFULLY BEFORE FEED.

N.B. Liquid at top of bottle will be much hotter than at bottom.

The bottle must be shaken thoroughly and tested before use.

WE DO NOT RECOMMEND THAT YOU USE YOUR MICROWAVE TO STERILISE BABIES' BOTTLES.

If you have a special microwave steriliser, we urge extreme caution, due to the low quantity of water involved. It is vital to follow the manufacturers instructions implicitly.

PLATED MEALS

Everyone's appetite varies and reheat times depend on meal contents. Dense items e.g. mashed potato, should be spread out well.

If a lot of gravy is added, extra time may be required.

Place denser items to the outside of the plate. Between 2–4 min. on HIGH power will reheat an average portion. Do not stack meals.

CANNED FOODS

Remove foods from can and place in a suitable dish before heating.

SOUPS

Use a bowl and stir before heating and at least once through reheat time and again at the end.

CASSEROLES

Stir halfway through and again at the end of heating.

Questions and answers

Q: Why won't my oven turn on?

A: When the oven does not turn on, check the following:

1. Is the oven plugged in securely?
Remove the plug from the outlet, wait 10 seconds and reinsert.
2. Check the circuit breaker and the fuse.
Reset the circuit breaker or replace the fuse if it is tripped or blown.
3. If the circuit breaker or fuse is all right, plug another appliance into the outlet. If the other appliance works, there probably is a problem with the oven. If the other appliance does not work, there probably is a problem with the outlet.
If it seems that there is a problem with the oven, contact an authorised Service Centre.

Q: My oven causes interference with my TV. Is this normal?

A: Some radio and TV interference might occur when you cook with the oven. This interference is similar to the interference caused by small appliances such as mixers, vacuums, blow dryers, etc. It does not indicate a problem with your oven.

Q: Sometimes warm air comes from the oven vents. Why?

A: The heat given off from the cooking food warms the air in the oven cavity. This warmed air is carried out of the oven by the air flow pattern in the oven. There are no microwaves in the air. The oven vents should never be blocked during cooking.

Q: Can I use a conventional oven thermometer in the oven?

A: The metal in some thermometers may cause arcing in your oven and should not be used in a microwave oven.

For NN-ST34NB only

Q: The oven won't accept my programme. Why?

A: The oven is designed not to accept an incorrect programme. For example, the oven will not accept a 4th stage.

Care of your oven

1. The oven should be unplugged before cleaning.
2. Clean the inside of the oven, door seals and door seal areas regularly. When food splatters or spilled liquids adhere to the oven walls, door seals and door seal areas wipe off with a damp cloth. Mild detergent may be used if they get very dirty. The use of harsh detergent or abrasive is not recommended. Avoid cleaning the microwave feed guide area situated on the right hand side of the cavity wall.
DO NOT USE COMMERCIAL OVEN CLEANERS.
3. Do not use harsh, abrasive cleaners or sharp metal scrapers to clean the oven door glass since they can scratch the surface, which may result in shattering the glass.
4. The outside oven surface should be cleaned with a damp cloth. To prevent damage to the operating parts inside the oven, water should not be allowed to seep into the ventilation openings.
5. If the Control Panel becomes dirty, clean it with a soft cloth. Do not use harsh detergents or abrasives on the Control Panel. When cleaning the Control Panel leave the oven door open to prevent the oven from accidentally turning on. After cleaning press Stop/Reset to clear display window or make sure Time/weight select dial is set to zero position.
6. If steam accumulates inside or around the outside of the oven door, wipe with a soft cloth. This may occur when the oven is operated under high humidity conditions and in no way indicates a malfunction of the unit.
7. It is occasionally necessary to remove the glass tray for cleaning. Wash the tray in warm soapy water or in a dishwasher.
8. The roller ring and oven cavity floor should be cleaned regularly to avoid excessive noise. Simply wipe the bottom surface of the oven with mild detergent and hot water then dry with a clean cloth. The roller ring may be washed in mild soapy water. Cooking vapours collect during repeated use but in no way affect the bottom surface or roller ring wheels. Do not remove the roller ring from the cavity floor for cleaning.
9. A steam cleaner is not to be used for cleaning.
10. This oven should only be serviced by qualified personnel. For maintenance and repair of the oven contact the nearest authorised dealer.
11. Failure to maintain the oven in a clean condition could lead to deterioration of surfaces that could affect the life of the appliance and possibly result in a hazardous situation.
12. Keep air vents clean at all times. Check that no dust or other material is blocking any of the air vents on the top, bottom or rear of the oven. If air vents become blocked this could cause overheating which would affect the operation of the oven and possibly result in a hazardous situation.

Specifications

Power Source	220 V 60 Hz	230-240 V 50 Hz
Power Consumption	5.9 A 1330 W	5.5 A 1330 W
Output	900 W (IEC-60705)	
Outside Dimensions	469 (W) × 380 (D) × 280 (H) mm	
Oven Cavity Dimensions	329 (W) × 326 (D) × 236 (H) mm	
Overall Cavity Volume	25 L	
Glass Tray Diameter	288 mm	
Operating Frequency	2450 MHz	
Net Weight	Not final 12.5 kg	

- Weight and Dimensions shown are approximate.
- Specifications subject to change without notice.
- As for the voltage requirement, the production month, country and serial number, please refer to the identification label on the microwave oven.
