Presenting Flexible

## **2 WAY** WASHING TECHNOLOGY

Jab Chahe Hot. Jab Chahe Cold.

WITH **BUILT-IN HEATER**

# Panasonic

## Our technology is our legacy.

At Panasonic, we have always worked towards enhancing our technology and offering the best quality products to our customers. We have spent over 70 years in perfecting our research and technology, by virtue of which we have already crossed the 100-million-unit mark in 2013. Our washing machines are sold across the globe and their trustworthiness speaks for themselves.

**Fully  
Automatic**

# BUILT-IN HEATER

## Fight stains with Built-in heater.

Panasonic's Hot Wash technology brings a new approach to washing clothes. An attached built-in heater, under the tub, heats the water which stimulates the detergent enzymes, making it more effective to clean dirt and stains.

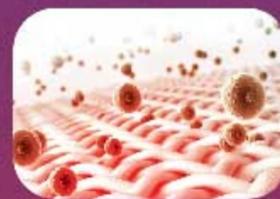

Eliminates **99.9%** of Bacteria.

60°

1

60° - bacteria and microorganisms are eliminated.

60°C Wash for Germ Clean Course.

40°

2

40° - sebum softens and dissolves.

50°C Wash for Curry Course.

37°

3

37° - sebum and oily stains start to dissolve.

40°C Wash for Collar / Sleeve Course.

# ActiveFoam SYSTEM

**When the foam is activated, the tough stains get dissolved easily.**

The ActiveFoam System creates fine, high-density foam before the washing cycle starts.

The foam lifts, separates and removes dirt particles from deep within the fibers.

---

Soak - Clothes get soaked along with the detergent. The dirt/stains get cleaned from the fabric.

---

Dissolve- Foam sticks to the stains and soaks the dirt particles.

---

Wash- Dirt is pulled out of the fine fibers and is washed away with the powerful flow of the water.

# BEE Regulation

Panasonic Washing Machines are rated 5 Star by BEE

- Rating is based on per cycle energy consumption per kg (kWh/cycle/kg)
- With 1 star, energy consumption per cycle is  $0.0171 < E \leq 0.0185$  and with 5 stars, energy consumption per cycle is  $E \leq 0.0132$ .
- Higher the Star Rating, Better the efficiency on all the following parameters
- 5 stars are only provided when the product achieves all the following parameters

\* - Applicable on select models only

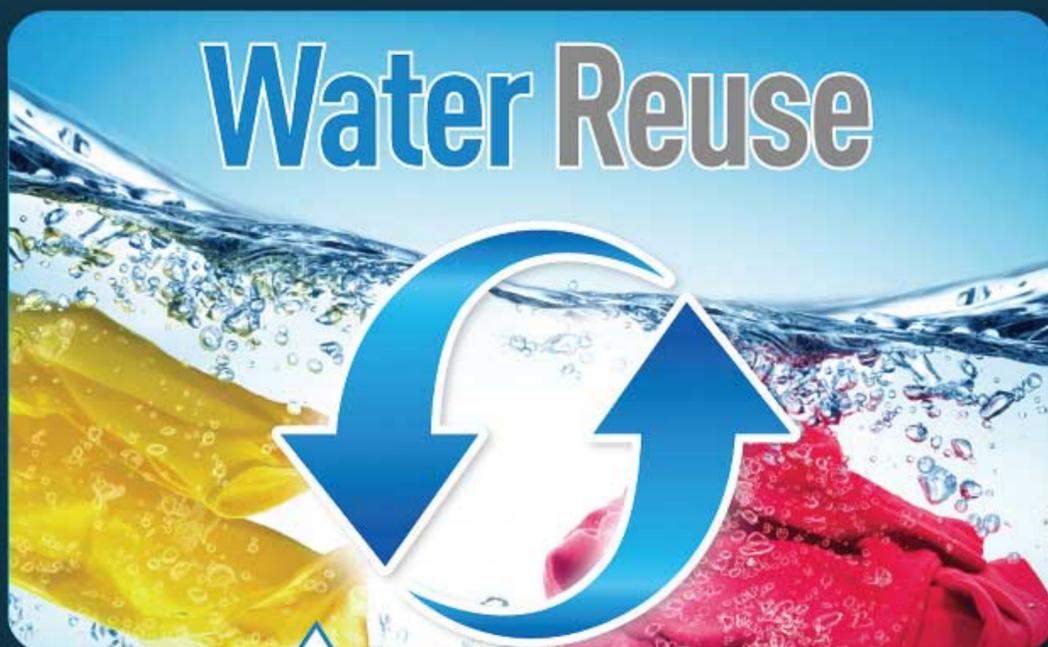

## Water Saving

Panasonic Washing Machines aim to save as much water as possible while giving your clothes the cleanest wash. With features like Water ReUse, Aqua Spin Rinse and EcoNavi, you can conserve water in every wash cycle.

## Upto 28%\* Water Saving

In regular washing machines, water is drained after a wash course.

With Panasonic's Water Re-use option, you can choose to save water whenever you want. In this mode, the water is not drained after rinsing the washed clothes. The function enables to preserve the water for the second wash cycle.

### *Aqua spin rinse*

Along with the regular water flow, two additional showers at different locations inside the drum efficiently remove detergent from the clothes by using minimum amount of water.

INTELLIGENT ECO SENSORS

**ECONAVI**

With the combination of Load & Water Temperature Sensors the time & water consumption is adjusted to ensure effective utilization.

\* Calculated value does not include water absorbed by clothes.

# Consumer Challenges & Panasonic Solutions

## Consumer Challenges

## Panasonic Solutions

Cannot Remove Dirt

**ActiveFoam**  
SYSTEM

High dense foam is generated which enable to attaches to the dirt & lift away.

The whiteness of the clothes is dulled

**White course feature**

To ensure "Whites remains White", a combination of Hot & Cold Wash.

Stubborn stains remain

**StainMaster+**

**StainMaster**

WITH **BUILT-IN HEATER**

Built-In Heater Stain Master+ hot water treats stubborn stains and ensure the effective removal of these stains.

## Consumer Challenges

Detergent spot remains

## Panasonic Solutions

### *Aqua spin rinse*

Along with the regular water flow, two additional showers at different locations inside the drum efficiently remove detergent from the clothes by using minimum amount of water.

Extra water is consumed

INTELLIGENT ECO SENSORS

**ECONAVI**

With the combination of Load & Water Temperature Sensors time & water consumption is adjusted to ensure effective utilization.

Extra energy is wasted

5 Star energy rated machines for ensuring effective utilization of resources along with effective washing performance.

# TOPLOAD WASHING MACHINE

# StainMaster+

## 60°C Wash for 99.99% Bacteria Elimination\*

Washes clothes with 60°C water to eliminate bacteria attached to the fabric. The heater keeps the water hot during the wash to completely eliminate 99.9% germs.

Ideal for washing bedsheets and also de-sanitizes infant clothes.

## Hot Wash Course

### 1- Curry

Curry and food stained clothes should be soaked in detergent and warm water (50°) for long time and scrubbed for better results.

### 2- Collar/Cuff

Tough stains on the collar and cuff are washed away after soaking them with warm water (40°) and dissolved detergent.

### 3- Germ Clean

With the Built-In heater's feature, the water used for washing the clothes remains hot throughout the wash cycle, thus eliminating 99.9% of germs from the tough stains on the fabrics.

# White Course

## Extra white results with 2-step cold & hot wash

The White Course feature is specially designed for washing white clothes with a 2-step wash, with hot and cold water, which thoroughly removes dirt and sebum.

## White Course: Special Intensive Washing Program

### 1 White Wash Course

#### 1<sup>st</sup> Wash

Cold water washes away dirt and drains the dirt water.

#### 2<sup>nd</sup> Wash

Hot water cleans the tough stains and sebum.

### 2

### Strong Water Flow

The strong flow of water removes dirt particles and stops it from clinging back to the clothes.

### 3

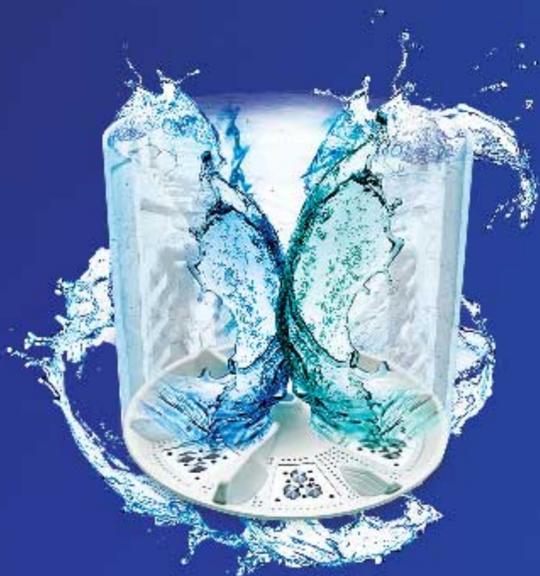

### Double Cleanse

The amount of detergent makes sure that the clothes are thoroughly cleaned and thorough rinsing ensures none of it is left undissolved.

# Aqua Tide Pulsator

**ECO  
AQUA BEAT**

Water Flow

**X**

Water  
Temperature

## Powerful scrub wash effect with Aqua Tide Pulsator

The Aqua Tide Pulsator has 6 wings that create a powerful vertical water flow in the tub. This intense wave of water repeatedly moves clothes up and down for a scrub wash effect that removes stubborn stains. Along with the hot water, the effect of strong water flow multiplies, thus resulting in the effective removal of stains.

## Sazanami Drum

Panasonic's newly developed drum, the Sazanami Drum, is ideally designed with dimple-shaped jets which effectively remove dirt and dust particles from dirty clothes, and still is gentle on them.

This specific design means a better high spin and dry cleaning & also avoids the clothes being caught and damaged in the drum.

# Aqua Spin Rinse

This distinctive feature sprays a strong shower of water on all clothes to thoroughly wash away any extra detergent or foam, cleaning the clothes in a better way.

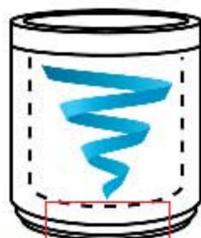

This method, compared to the traditional way of rinsing and soaking laundry, saves up to 28% water.\*

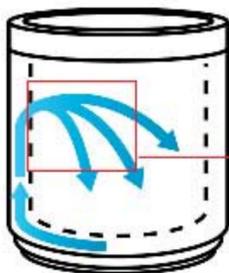

\*Tested by Panasonic using the NA-F80S8 model. A comparison of the amount of water used in the whole wash sequence.

## Combination of 3 types of waterflow creates:

### ECO AQUA BEAT

**Powerful Motor 400W Output\***  
\*Output differs depending on the model.

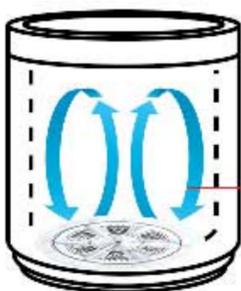

### 1. BEAT SCREW

Dirt particles in the fibers are cleaned with the powerful splash action

### 2. BEAT FLASH

Strong water-jets fall on the dirty clothes from the nozzles

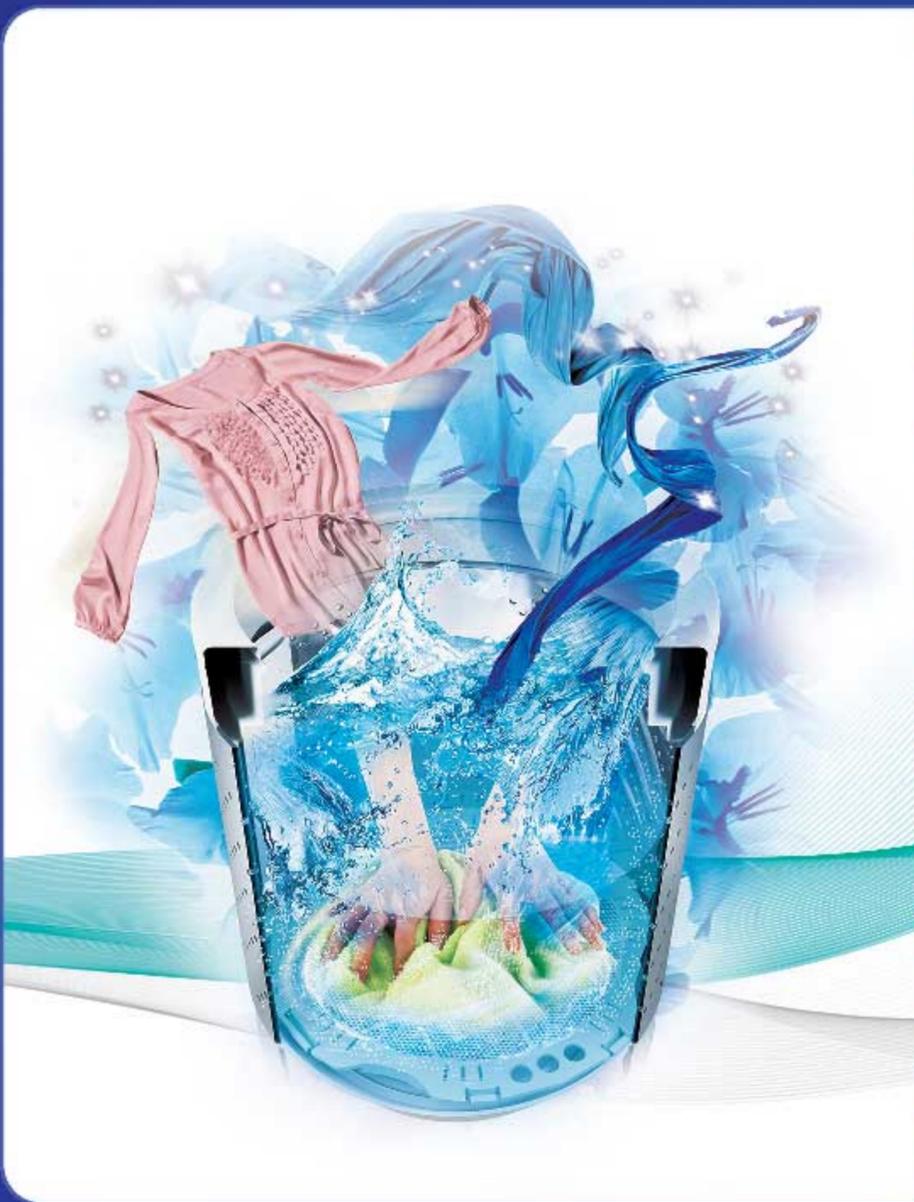

**Aqua Tide Pulsator\***

### 3. BEAT TIDE

Vertical waterflow gives an up and down tidal treatment

# Gentle Hand Wash

## Mechanism of Gentle Hand Wash

### Better than Hand Wash!

The Gentle Handwash option washes your delicate clothes with care. Foam and water meticulously clean them with easy pressure and slow rotation, which gives a gentle push to remove dirt easily and softly.

Water circulates in the tub as the pulsator revolves. The detergent and water turn into foam, penetrating the fabric and cleaning it like a wash by hand. The laundry remains at its position and because of no mechanical friction, does not get damaged.

# Design

## Glass Look

Designed in a way to give a glassy and mirror appearance.

## Soft Closure

Closure designed for easy use and better safety.

## 3 Key Points of EASY WIDE OPENING Design

### 1 Easy to load/unload

#### Wider Tub Opening

Wide opening makes it easier to load/unload large items.

### 2

#### Easy to read & operate

#### Back Control Panel

Control panel is at the back so buttons are easy to read and operate without looking down.

### 3

#### Easy To Reach

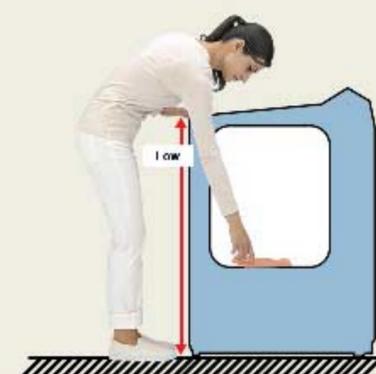

#### Lower Front Height

The lower height of the panel does not strain the back while loading/ unloading laundry and makes it easy to reach the bottom.

#### Reach the bottom without strain

There are no operation buttons at the front, so loading/unloading is smooth.

It's easy to reach the bottom of the tub and take out washed items with minimum strain on arms or back.

## INTELLIGENT ECO SENSORS

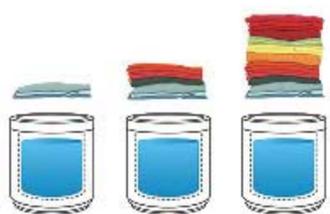

# ECONAVI

The ECONAVI feature, by automatically sensing water temperature and laundry weight, adjusts the machine's operations regarding water usage and the duration of the water cycle, saving energy and water while effectively removing waste and dirt.

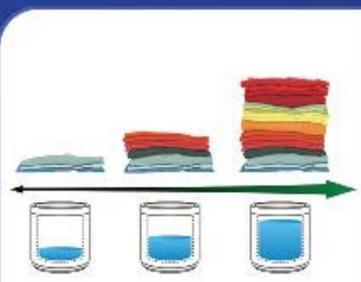

### Without Eco Navi

### With Eco Navi

#### Water Load Sensor

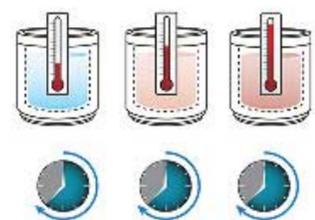

The amount of water used is the same, irrespective of the amount of clothes. This unnecessarily wastes a lot of water when the load is small.

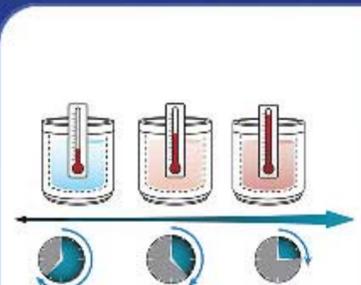

The ideal amount of water is used in every wash to avoid waste. When the load is less, the water level is reduced to save water.

#### Water Temperature Sensor

Generally, when the water temperature is high, the wash course duration remains the same. This wastes time and energy both.

When the temperature of the water is high, the wash course duration is reduced and vice versa, thus saving time and energy at the same time.

**SAVES  
ELECTRICITY**

# Washing Experience

With the exclusive functions and modes of Panasonic Washing Machines, you can now wash many types of stubborn stains from various kinds of fabrics.

## 1. Normal

This standard feature is available in every Panasonic washing machine, along with the eco-friendly program, the ECO-Navi function. Wash everyday clothes with this option.

## 2. Gentle Handwash

Delicate clothes like designer clothes, clothes with embroidery and work can be cleaned gently with slow spin speed and gentle water flow in the Gentle Handwash Net.

Up to 1.2 kg of delicate laundry can be cleaned with this program in a wash.

\*S8 & V8 Series only

## 3. Bed Sheets

With the Bed Sheet Program, you can wash heavy laundry like sheets, covers etc. Just follow the instructions on the bedsheet's tag and wash up to 4.2 kg of laundry in one wash cycle.

## 4. White

While washing white clothes that easily show dirty stains and spots, the White course under the Stain Master+ washes them in two steps with cold and hot water for better results.

## 5. Jeans

Thick fabric clothes like jeans, jackets soiled with stains etc can be easily cleaned with the force of swirling water and detergent with the Stain Master.

## Cold Water Course

### 1. Sweat

After being washed in cold water, the germs and bacteria from sweat are eliminated, giving your clothes a hygienic wash with the Cold Water Course of Stain Master.

### 2. Sauces

The Cold Water Course of Stain Master also removes sauce stains, which are tough to clean and gives the clothes the best wash.

## Hot Water Course

### 1. Collar/Cuff

Tough stains on the collar and cuff are removed after soaking them with foam and warm water (50°), which is heated with the Built-In Heater.

### 2. Curry

Curry and food stained clothes soaked in detergent and warm water (50°) from the Built-In Heater, for a long time and scrubbed give better results.

Wash up to 2.0 kg of laundry in one wash cycle.

### 3. Germ Free

The Hot Wash courses, which heat water with the Built-In Heater, are the best for a clean and hygienic wash, which eliminate bacteria and germs from stains and spots with the cleanest results.

# SEMI AUTOMATIC WASHING MACHINE

# Design

Panasonic's Semi Automatic Washing Machines are designed for the best and easy use, with each feature made to benefit the user in every wash course.

## Aqua Water Filter

It stops the impurities in the water from entering the tub to ensure a clean wash every time.

## Foam Generator

High dense foam is generated which enable to attaches to the dirt & lift away.

## Covered panel

Introducing new covered panel facia for elegant looks & convenience.

## Soft Closure

The lid gradually and quietly closes on its own for easier and safer usage.

## Glass lid

The lid, designed with durable glass, gives it a mirror appearance and can bear heavy load as well.

# ActiveFoam SYSTEM

## When foam is active and stains, inactive.

With Panasonic's Active Foam System, foam is used to wash away the dirt. Stains are lifted from each crevice of the clothes to be cleaned more efficiently with the high-density of the foam.

**Soak-** Detergent is soaked in the water and turns into foam

**Dissolve-** Foam sticks to the stains and soaks the dirt particles

**Wash-** Dirt is pulled out of the fine fibers and is washed away with the powerful flow of the water

## Fine Foam Maximizes Wash Performance

### Power of Foam

Highly concentrated foam completely surrounds the clothes and attaches to the dirt, which is then lifted away with the powerful water flow.

Foam adheres to dirt

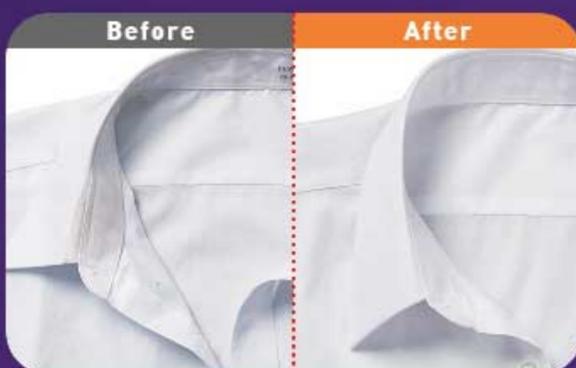

Penetrates fibers to remove dirt

Separates & washes it away!

## Benefits of Washing With Foam

### Clean Result

Rich, dense foam cleans clothes powerfully, removing dirt.

### Quick Penetration

Detergent, in the form of foam, penetrates the stains to clean them thoroughly.

### Completely Dissolved Detergent

Detergent dissolves in the water, turning into foam which results in less detergent stains.

## Foam Generator

Water is jet sprayed through the narrow chamber on to the turbo mixer. Detergent powder in the chamber gets mixed with the water through turbo mixer.

Foam generated in the detergent box is cascaded into the wash tub through the chambers behind the detergent box.

## Aqua Tide Pulsator

Detergent, dissolved successfully in water, forms foam, which then penetrates into the cloth fibers to wash away the tough and dirty stains.

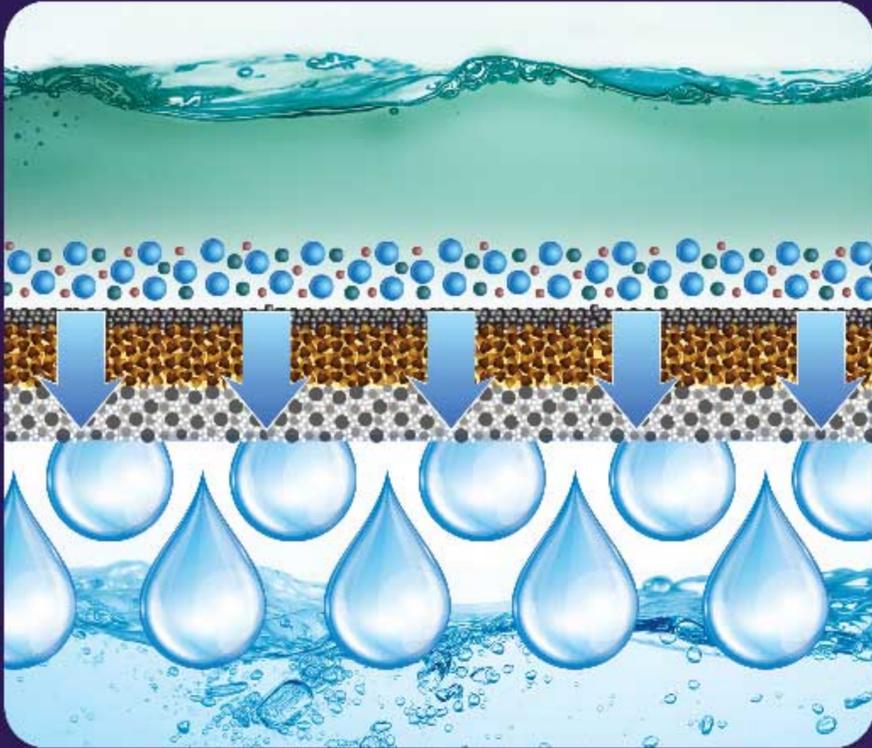

The 4 wings of the Aqua Tide Pulsator create a powerful vertical flow of water in the tub. With this intense wave of water, clothes repeatedly move up and down for a scrub wash effect, that lifts stubborn stains.

## Powerful Motor

The powerful motors are used in Panasonic Semi-Automatic washing machines. The power of these powerful motors make it easy to wash heavy laundry like curtains, linens etc. as well as everyday clothes.

## Aqua Water Filter

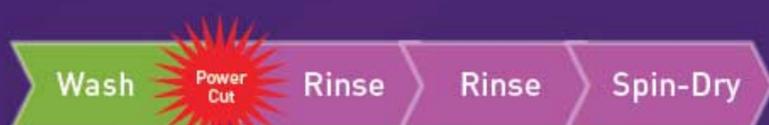

Get a clean wash every time with Aqua Water Filter. It stops the impurities and dirt present in the water from entering the tub to ensure a clean and fresh wash every time.

## Auto Restart Functions

Auto re-start starts the machine automatically after a power cut.

Once the power comes back, the machine goes back to the two minutes of its wash course before the power cut happened, instead of starting the course all over again. This feature helps you to save your time as well as the washing machine's energy.

# Auto Restart

Just **2** min.back

Panasonic Advanced System

Wast of time, water & energy

Conventional System

## Aqua Shower Rinse

This feature sprays a strong shower of water on the dirty laundry to thoroughly wash away any extra detergent or foam, cleaning the clothes in a better way.

Any risk of skin allergies is also avoided as the excess detergent is removed and drained.

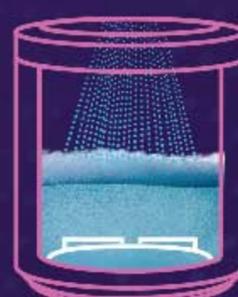

In this manner, the clothes retain their quality and shine for a longer period of time.

**With Aqua Shower Rinse, sufficient rinsing performance with less water.**

# FRONTLOAD WASHING MACHINE

# Hexa Drum

## Drum Design

The Hexa Drum, carefully designed with its unique hexa cube pattern, washes the laundry with a firm massage-like treatment and remains incredibly gentle to the clothes so as not to damage the delicate fabrics.

## Riser Wings

Along with the powerful Riser Wings, with almost 138 holes in each wing giving a strong water flow that make the clothes tumble up and down so even tough stains are cleaned easily, the Hexa Drum makes way for the perfect wash.

## Powerful Wash

Jets of water spray from 2196 mini holes with a fine diameter of 0.24, which washes away the dirt and penetrates into the fabric to deliver a clean wash course.

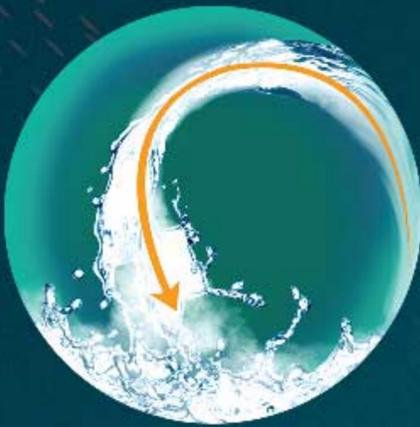

# Aqua Fresh Wash

The Aquabeat Wash is combined with three distinguishing water flows for washing the stained and dirty clothes in the best way. Every wash, with its unique style of flow, cleans the clothes thoroughly, which gives them a new and fresh feel every time.

## Aquabeat wash

### Beat Wash

Tumble wash of 30 sensor with powerful movement

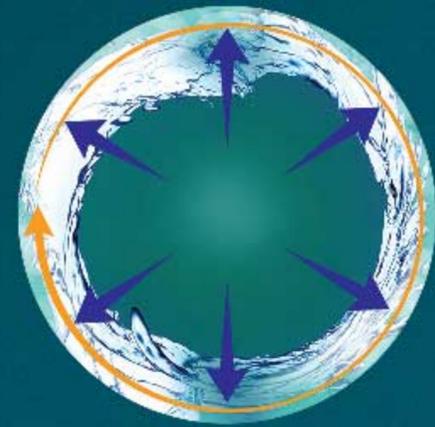

### Toss Wash

Massage like treatment to the laundry

### Rain Wash

Water's centrifugal force and foam washes the clothes

## 3D Wash System

Detected by Sensors

Optimal tumbling control with 4 sensor

- Balance of Clothes
- Amount of Foam
- Water Temperature
- Water Level

# Features – Convenience & Aesthetics

## Intensive Wash

The Intensive Wash Program gets rid of tough stains while keeping the quality of the fabric intact.

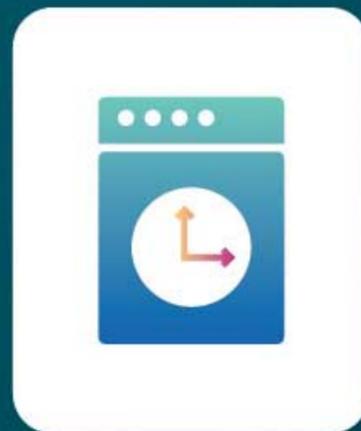

## Hot Air Dry

Hot air is used to dry the washed clothes quickly. You can also set the dryness according to the cloth's fabric.

## Pause & Add

You can add clothes which you may have forgotten or which only need a short wash, in the machine mid-wash cycle.

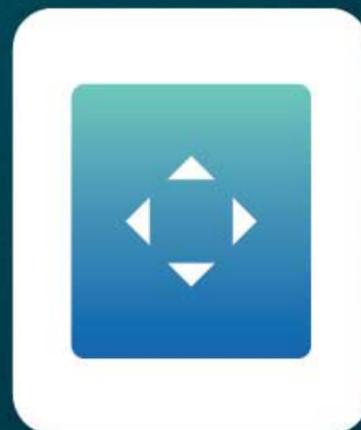

## Brisk Wash - (Complete cycle in 15 mins - Wash + Rinse + Spin)

This course takes care of your everyday clothes and when you are running short of time, without hindering the wash quality.

## 25% less time

Speed Wash takes 25% less time to finish the laundry process by increasing the beat frequency and reducing the dwell time.

## Big Display

A large interactive display enables better selection and communication of the desired feature or programmes.

## Wide Door

A 480mm door gives a wide opening to load/unload laundry. It not only aids in operation but also creates an aesthetic appeal.

## 10 Year Warranty

The durability of the product is backed with its warranty.

# Product range

## MB2 Series

### Features

- A+++ Energy Rated
- Hexa cube Drum
- Brisk Wash
- Pause N Add
- 16 Programs
