Always turn the power switch off and disconnect the plug from the household outlet. (Except when performing maintenance on the air outlet)

Maintaining the air inlet

Clean the air inlet once a month or over.

- Clean lint, hair, or other matter from the air inlet with a toothbrush or a vacuum cleaner.

Maintaining the air outlet

Clean the air outlet once a month.

- The hair dryer should be plugged into the household outlet only in case of maintenance for a long period.

- ▶ Notes**
 - During maintenance, do not block the air inlet with your hands, etc.
 - During or after maintenance of the air outlet, dust, etc. may scatter. Ensure that the hair dryer does not blow out any dust from the air outlet before using. (Do not look into the air outlet.)

Maintaining the ion outlet (EH-NE27 only)

Clean the ion outlet about once every 1 month.

This maintenance allows the hair dryer to sustain the generated level of ion over a long period.

- Use commercially available cotton swabs. (We recommend the thin cotton swabs made for babies.)
- Insert the cotton swab softly until it tips (approximately 10 mm), then rotate it softly 2 or 3 times.

Maintaining the hair dryer

- Clean the housing only with a soft cloth slightly dampened with tap water or soapy tap water.
