ideas for life

Dive into the World of Full HD 3D

PT-AE8000
Full HD 3D Home Cinema Projector

Dive into the World of Full HD 3D
3D Home Cinema Experience
Just Got Better than Ever

Advanced 3D dual-core processing engine enables high-quality 3D and 2D projection.
Hollywood continues to produce and release 3D movies that give us an entirely new level of dynamic realism. The PT-AE8000 Full HD 3D Home Cinema Projector was developed according to the Panasonic philosophy of providing images that mirror the director’s artistic vision and intent—right in your own home. The PT-AE8000 is designed from the ground up to achieve higher basic 2D performance, and packed with unique 3D features to deliver the level of quality demanded by Hollywood professionals. The key 3D projection technologies were developed in collaboration with Panasonic Hollywood Laboratory (PHL) engineers, who have taken key roles in establishing the industry standards for 3D. This allows the PT-AE8000 to deliver both stunning 2D images and a comfortable and immersive 3D viewing experience at home.

Excellent Picture Quality

High 2,400 lm of Brightness with the Advanced Red-Rich Lamp
The new 220 W Red-Rich Lamp increases the luminous efficiency of the projector to achieve brighter images, even in 3D viewing, with excellent color purity. Able to produce a stunning brightness of 2,400 lm, the PT-AE8000 unleashes the beauty of 2D/3D full-HD expression for viewing on various screen sizes. Cooling efficiency for example around the polarization filters has been increased to realize the higher luminos. Color purity is further increased by applying a special coating to the red and green condenser lenses in order to trim the impurities from the light after it is separated into the three primary colors.

Full-HD Optimized Optical System
To assure maximum clarity and sharpness in full-HD images, this advanced optical system employs a full-HD-optimized lens unit comprising of 16 lens elements in 12 groups, including two large-diameter aspherical lenses and two high-performance ED (extra-low dispersion) lenses. Each lens is carefully aligned to assure a uniform focusing balance from the center to the edges of the screen. As a result, the PT-AE8000 produces stunningly clear and beautiful images.

Up to 480 Hz Compatible LCD Panels
The PT-AE8000’s full-HD LCD panels provide bright images with high aperture ratio. The panels are also designed for 480 Hz processing capability for bright 3D image. These high-precision panels use vertically aligned liquid crystal molecules with inorganic alignment layers. When no voltage is applied, the molecules are aligned perpendicular to the glass substrate, so there is minimal light leakage, providing higher contrast.

Pure Contrast Plates Deliver High 500,000:1 Contrast Ratio
The Pure Contrast Plates in the PT-AE8000 use a high-precision crystalline material that is carefully matched to the characteristics of the LCD panels to effectively correct the passage of light exiting the panels. This enables the projector to block unwanted light leakage and successfully increases the dynamic range. It works together with the Pure Color Filter Pro and Dynamic Iris Pro to achieve an astounding contrast ratio of 500,000:1.

Pure Color Filter Pro for Rich, Vibrant Colors
The optical filter optimizes the light spectrum from the UHM projector lamp, helping to produce deeper blacks while improving purity levels in the three primary colors (red, green and blue). This advanced filter system improves color purity to cover a range that extends from the HDTV standard (Rec. 709 mode)*1 to the color gamut used in digital cinema*2. This gives images the deep, rich coloring that distinguishes movie images.

Dynamic Iris Pro Adds Beauty to Both Dark and Bright Scenes
This intelligent iris system works by analyzing the brightness level of each image using a histogram, then adjusting the lamp power, iris and gamma curve*3 accordingly to create the ideal image. The adjustments are made virtually frame by frame. This helps the projector achieve a wide dynamic range with swift smoothness for added beauty in both dark and bright scenes.

Smooth Screen Technology Creates Film-Like Texture
While many LCD projectors suffer from a “chicken wire” effect, Panasonic’s pursuit of the highest possible image quality has successfully overcome this device limitation through the incorporation of Smooth Screen technology. This uses the double refraction property of crystals to arrange pixels on a screen with no gaps between them.

Seven Picture Modes
For each 2D and 3D viewing, seven different picture modes (normal, dynamic, Rec. 709, D-cinema, cinema 1, cinema 2 and game mode for reduced frame delay) are provided.

A Full HD 3D Experience that Will Blow You Away!

The PT-AE8000 and optional Panasonic active 3D Eyewear are finely tuned to achieve 3D viewing with Hollywood-like quality.
A Whole New Level of 3D Viewing

**LCD Panels Driven at 480Hz and Original Overdrive Technology for Bright 3D Image**
The PT-AE8000 features 480Hz-driven LCD panels, which lengthen the time that the shutter is open about 1.5 times the duration of a 240-Hz drive system. Together with Panasonic’s original high-precision overdrive technology, this improves the brightness of the images viewed through 3D Eyewear, while at the same time minimizing crosstalk, or double image seen as a result of the left image entering the right eye and vice versa.

**3D Motion Remaster Delivers Correct, Natural 3D Movement**
This new technology solves the problem caused by a phenomenon called the Mach-Dvorak effect, which occurs in many systems during 3D viewing. The active shutter 3D system displays left-eye and right-eye images alternately. This means that left-eye and right-eye images that were captured at the same instant are shown with a time lag. During this time lag, especially when watching a scene in which an object moves quickly and horizontally across the screen, the viewer’s brain automatically speculates and forms an image at a position that differs from the actual shown image. This results in incorrect depth perception and makes the horizontal movement appear unnatural. 3D Motion Remaster technology achieves smoothly moving 3D images by creating properly positioned images to compensate for the time lag.

The PT-AE8000’s 3D Motion Remaster technology solves the problem caused by the Mach-Dvorak effect.

**Dual Core Processing Engine**
High-quality 2D image processing, including Frame Creation and Detail Clarity Processor, can be enjoyed in 3D as well, with the incorporation of the high-performance dual core processing engine.

**Frame Creation 2 for Motion Blur Reduction in 3D/2D Viewing**
A double-speed frame interpolation display for both 2D and 3D viewing, even during 2D-3D conversion, greatly improves the clarity of motion images, reproducing sharp and clear images for fast moving scenes in sports and action movies. For 24p signal input, four frames are calculated and interpolated for each existing frame, to enable 5x speed (120-Hz) display.

**Frame Creation 2 Off**

**Frame Creation 2 On**

**2D-3D Conversion**
2D to 3D image conversion is possible, with five 3D effect modes to select from.

Customization and Installation Flexibility

**Lens Memory for 2D/3D Viewing**
Up to six settings, in 2D or 3D viewing, can be stored in the Lens Memory, including zoom and focus positions for projecting in the normal 16:9 or 4:3 image ratio, and wide cinema projection settings. These memories can be recalled manually for 2D or 3D, or can be set for automatic switching in 2D. The projector is able to detect 2.35:1 and 16:9 sources and retrieve the stored setting automatically. The Lens Memory function lets you easily enjoy images with different image ratios on a wide 2.35:1 screen for an immersive theater-like experience.

**2x Optical Power Zoom/Focus and Wide Lens Shift Range**
A 2x optical power zoom/focus lens and a lens shift function together make it possible to project a 120-inch picture from as close as 3.6 meters (11 feet 10 inches) to the screen or as far as 7.2 meters (23 feet 7 inches) away. In addition, the image can be shifted ±100% vertically, and ±26% horizontally. This gives you outstanding setup flexibility. If you choose to ceiling-mount the projector, you can zoom and focus by remote control.

**Waveform Monitor for Precise Calibration**
With the PT-AE8000 you can view the waveforms on the screen and adjust the settings both automatically and manually as you prefer.

**Advanced Gamma Adjustment Function**
The gamma curve can be flexibly controlled, allowing precise calibration according to the signal source and environment. Brightness (Y), R, G and B can each be adjusted at any fifteen points. Adjustment point positions can be shifted both horizontally and vertically to bring out the desired gradation level. Adjustment is easy because the small menu screen does not block the image.

**Split Adjust Mode for Easy Picture Adjustment**
You can freeze any scene you wish, and then make adjustments while easily comparing the original image and the adjusted image side by side.

**Cinema Color Management Premium Enables Flexible Color Control**
This color correction system enables free color control in two different modes. The Point Color Correction mode lets you pick a point in the image and adjust that color without affecting the neighboring colors. The Six Color Correction mode enables independent adjustment of red, green, blue, cyan, magenta and yellow. Adjustment is possible for either 2D or 3D viewing.

**Abundant Connection Terminals**
- **HDMI™ with x.v.Color™ and Deep Color**
The PT-AE8000 has three HDMI input terminals for digital transmission without image degradation. The HDMI input terminals also sup-
The amount of parallax is optimized according to the projection size. Panasonic's proprietary lamp drive system helps maintain lamp performance with several remote controls.*8 Program stored on an HD recorder. This eliminates the need for manual image adjustment. The projector is set up in front of the screen, and the lens shift function is not necessary when the screen is blocked. The projector is set up in front of the screen, and the lens shift function is not necessary when the screen is blocked.

**VIERA Link for Easy Operation**

The PT-AE8000 supports VIERA Link. If your home theater system contains VIERA Link-ready equipment, projection performance can be started by using only the remote control unit of the PT-AE8000. The projector can be started by using only the remote control unit of the PT-AE8000. When a lamp is replaced, the lamp replacement cycle is up to ten meters (about 33 feet), an optional infrared transmitter, ET-TRM110 is available for greater installation flexibility.

**3D Viewing Monitor for Adjustment of Depth-of-Field**

The projection size for viewing 3D images can be selected from among 9 different sizes, ranging from 40 inches to 200 inches diagonally.** The amount of parallax is optimized according to the projection size, so comfortable, easy-to-view 3D images can be enjoyed at any size. Either of three monitor styles can be selected.

**3D Picture Balance with Waveform Monitor**

The projector is able to show the right and left image side by side to check if the two sides have the same colors. The difference may occur due to poor content quality. With the Waveform Monitor displayed, you can adjust the contrast, brightness, color and tint as desired, and up to three adjustment settings can be stored in memory for instant recall.

**Precisely Tuned 3D Projection with Optional Panasonic 3D Eyewear**

The PT-AE8000 uses frame sequential technology for 3D image projection. When viewing 3D content, signals in the PT-AE8000’s built-in infrared transmitter precisely control the left and right shutters of the active 3D Eyewear. The built-in transmitter offers maximum transmission distance of six meters (about 20 feet). For more range up to ten meters (about 33 feet), an optional infrared transmitter, ET-TRM110 is available for greater installation flexibility.

**Energy-consistent Design**

Panasonic works from every angle to minimize environmental impact in the product design, production and delivery processes, and in the performance of the product during its life cycle. The PT-AE8000 reflects the following ecological considerations:

- No halogenated flame retardants are used in the cabinet.
- Lead-free glass for the lens.
- Standby power consumption of only 0.08 W has been achieved.
- A sleep-timer that reduces wasteful power consumption.
- RoHS compliant.

**Eco-Friendly Features**

- A setting that supports the 6,500K color temperature recommended in the HDTV standard (ITU-R BT.709).
- Specifications put forth by the Society of Motion Picture and Television Engineers (SMPTE) PR431-2.
- Parameters for adjusting the output brightness gradation level according to the input signal.
- Projection size for 2D images covers from 40 inches to 300 inches diagonally.
- The indicated distance between the projector and screen is valid when the conditions described below are satisfied. Also, note that the transmission distance can differ largely due to strong light, such as sunlight and fluorescent lamps, at the installation location or due to the screen type or material. Condition 1: The distance between the screen and the 3D Eyewear viewing position is 5 meters to the front of the screen. Condition 2: The screen is 100 inches, measured diagonally, and has a screen gain of 1. Condition 3: The trigger terminals also operate as the 3D shutter outputs to connect the optional 3D IR transmitter, ET-TRM110. Condition 4: Cannot be used simultaneously with TV that supports VIERA Link. Some operations may not be available depending on the equipment. In this case, use its own remote control to operate the equipment. Condition 5: When a lamp power is set to ECO. The lamp replacement cycle is up to 4,000 hours when the lamp mode is set to ECO. When the lamps are turned on and off more frequently, the lamp replacement cycle is shortened. The usage environment affects the lamp replacement cycle.

**Finest Details**

Detail Clarity Processor 4 gives natural clarity to even the finest details of each part of the image based on the extracted information. The result is that objects, 3D or 2D, have more natural, lifelike expression than those of previous image-processing methods.
Other Features
- 16-bit (full 12-bit) gamma correction for natural gradations.
- 3D noise reduction for high-precision noise detection and reduction.
- Scene-adaptive MPEG noise reduction effectively blocks regular noise and minimizes mosquito noise.
- Scene adaptive resizing LSI improves quality when resizing 480p images or those from other sources with resolution lower than the PT-EW8000's native resolution.
- 24p compatible.
- Progressive cinema scan (3/2 pulldown) and HD IP.
- Auto 3D input format select for frame packing, side by side, and top and bottom. Manual selection is also possible.
- Selectable frame response.
- Independent horizontal/vertical sharpness adjustment.
- Featuring a wide range of aspect modes, including ones for anamorphic lenses.
- Up to sixteen sets of PICTURE adjustment settings can be stored in memory with custom names that make them easy to remember (PICTURE MEMORY).
- Masking function to match the desired projection area to the screen.
- User-friendly ergonomic remote control.
- Built-in test pattern including color bar and gray scale.
- On-screen input guidance.
- Auto input search.
- Quiet operation: 22 dB (lamp power: EC0).
- NORMAL/ECO lamp power selection.

Optional accessories

ET-TRM110 3D IR transmitter

ET-PKA110H Ceiling mount bracket for low ceilings

ET-LAA410 Replacement lamp unit

NOTE: The 3D Eyewear models shown above are current models as of September 2012. For information on other available models with verified interoperability and the newest models, please visit our Projector Global Web Site.

Specifications

Power supply

- 100–240 V AC, 50/60 Hz
- 310 V [0.08 W in standby mode]
- 1.87 mm (0.74 in) diagonal (16:9 aspect ratio)
- Transparent LCD panel (+, 3, R, O/B)
- Active matrix
- 2,073,600 (1,920 x 1,080) pixels
- 2,073,600 pixels
- Lamp replacement cycle is up to 5,000 hours (lamp power: NORMAL) / 7,000 hours (lamp power: ECO)

Lens

- Powered zoom/hocus lenses (1.35–2.70:1), F 1.9–3.2, 12.4–44.8 mm
- 1.02 mm
- 1.02 mm
- Center-to-corner uniformity ratio
- Contrast ratio
- Resolution
- Scanning frequency

- HDMI
- 480i, 576i, 720p, 480p, 576p, 720p, 1080i, 1080p, 1080i/24, 1080i/25, 1080i/50, 1080i/50p
- Input: 15 kHz–74 kHz, 24 Hz–95 Hz
- HDMI connector: 3, HDMI (Deep Color, x.v.Color™, CEC™), HDCP compliant, supports HDMI Control Version 1.3
- D-sub HD 15-pin (female) + 1 (HDMI/VGA/YPbPr)
- RCA pin + 3 (YPbPr/YCbCr)

VGA IN

- S-DIN IN
- SERIAL IN
