Request Regarding Security

When using this product, security breaches of the type described below are conceivable.

- Leakage of your private information via this product
- Illegal operation of this product by a malicious third-party
- Harm to or cessation of operation of this product by a malicious third-party

Be sure to implement sufficient security measures.

- Set passwords, and limit the users that are permitted login access.
- Make sure the password is as hard to guess as possible.
- Change the password periodically.
- Panasonic Corporation and its affiliated companies never directly ask customers for their password. Do not give out your password even if directly asked by a third-party representing themselves as Panasonic Corporation.
- Always use on a network that has safety protection such as a firewall implemented.

About Wireless LANs

The advantage of a wireless LAN is that information can be exchanged between a PC or other such equipment and an access point using radio waves as long as you are within range for radio transmissions. On the other hand, because the radio waves can travel through obstacles (such as walls) and are available everywhere within a given range, problems of the type listed below may occur if security-related settings are not made.

- A malicious third-part may intentionally intercept and monitor transmitted data including the content of e-mail and personal information such as your ID, password, and/or credit card numbers.
- A malicious third-party may access your personal or corporate network without authorization and engage in the following types of behavior.
  - Retrieve personal and/or secret information (information leak)
  - Spread false information by impersonating a particular person (spoofing)
  - Overwrite intercepted communications and issue false data (tampering)
  - Spread harmful software such as a computer virus and crash your data and/or system (system crash)

Since most wireless LAN adapters or access points are equipped with security features to take care of these problems, you can reduce the possibility of these problems occurring when using this product by making the appropriate security settings for the wireless LAN device.

Some wireless LAN devices may not be set for security immediately after purchase. To decrease the possibility of occurrence of security problems, before using any wireless LAN devices, be absolutely sure to make all security-related settings according to the instructions given in the operation manuals supplied with them. Depending on the specifications of the wireless LAN, a malicious third-party may be able to break security settings by special means.

Please contact Panasonic if you need help taking care of security settings or other such. If you cannot perform security settings for your wireless LAN by yourself, please contact the Panasonic Support Center.

Panasonic asks customers to thoroughly understand the risk of using this product without making security settings, and recommends that the customer make security settings at their own discretion and responsibility.
What you can do

<WEB control>  (See page 21)
The following operations are possible when using WebBrowser.
・ Setting and adjusting the projector
・ Displaying the projector status
・ Setting for message transmission

<PJLink>  (See page 37)
Compatible with PJLink Class 1. The following operations can be performed from a computer when PJLink protocol is used.
・ Setting the projector
・ Querying the projector status

<Command control>
You can control the projector from a computer, using the control commands of the serial terminals.

Note
To use [WEB CONTROL], [PJLink], or [COMMAND CONTROL], set [WEB CONTROL], [PJLink CONTROL], or [COMMAND CONTROL] under [NETWORK CONTROL] in the [NETWORK] menu of the projector to [ON], respectively (See page 15).

Application software supplied in the CD-ROM
● Multi Projector Monitoring & Control Software (Windows)
  Software for monitoring and controlling multiple projectors connected via LAN.

● Logo Transfer Software (Windows)
  Software for transferring a user’s unique image such as a company logo to be projected at the beginning.

● Wireless Manager mobile edition 5.5 (Windows/Macintosh)
  Software for sending the computer screen via wireless/wired LAN.

Note
For the usage of the software listed above, see the operation manual for each software in the supplied CD-ROM, and for the restrictions, see “List of Compatible Projector Models”.
Notes on Using Wireless Connection

Wireless connection function of the projector uses radio waves in the 2.4 GHz band.
A radio station license is not required, but be sure to read and fully understand the following items before use.
The wireless module (part number: ET-WM200E/ET-WM200U) sold separately needs to be mounted when using the wireless LAN function with the projector.

■ Do not use near other wireless equipment.
The following equipment may use radio waves in the same band as the projector.
When the projector is used near these devices, radio wave interference may make communication impossible, or the communication speed may become slower.
• Microwave ovens, etc.
• Industrial, chemical and medical equipment, etc.
• In-plant radio stations for identifying moving objects such as those used in factory manufacturing lines, etc.
• Designated low-power radio stations

■ If at all possible, avoid the use of cellular phones, TV sets or radios near the projector.
Cellular phones, TV sets, radios and similar devices use different radio bands from the projector, so there is no effect on wireless communication or the transmission and reception of these devices. However, radio waves from the projector may produce audio or video noise.

■ Wireless communication radio waves cannot penetrate steel reinforcements, metal, concrete, etc.
Communication is possible through walls and floors made from materials such as wood and glass (except glass containing wire mesh), but not through walls and floors made from steel reinforcements, metal, concrete, etc.

■ Avoid using the projector in locations prone to static electricity.
If the projector is used in a location prone to static electricity, such as on a carpet, the wireless LAN or wired LAN connection may be lost.
If this happens, eliminate the source of static electricity or electromagnetic noise and reconnect to the wireless LAN or wired LAN.
In rare cases static electricity or electromagnetic noise may make it impossible to establish a connection to the LAN.
If this happens, press the power button on the remote control or on the projector to power off the projector temporarily.
After the cooling fan stops operating (after the power monitor on the projector changes from orange to red), power on the projector and reconnect to the LAN.

■ Using the projector outside the country
It is forbidden to take the projector outside the country or region where you purchased it, so use it only in the said country or region. Also, note that depending on countries or regions there are restrictions on the channels and frequencies at which you can use the wireless LAN.
Notes on Using Wireless Connection (continued)

■ Wired LAN
Use straight or crossover LAN cable that is compatible with category 5 or above.
* Whether straight cable, crossover cable or both can be used varies depending on the system configuration. For details, consult your system administrator.

■ Available wireless LAN channels
The channels (frequency range) that can be used differ according to the country or region. Refer to the table below.

<table>
<thead>
<tr>
<th>Country or region</th>
<th>Standard</th>
<th>Channels used</th>
<th>Frequency band (Center frequency)</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
</tbody>
</table>

Note
The wireless module (part number: ET-WM200E/ET-WM200U) sold separately needs to be mounted when using the wireless LAN function with the projector.
Check your computer

Necessary environment for computers to be connected

- First, check your computer to see whether or not it has a wired LAN or a built-in wireless LAN function.
  "Glossary" (See page 40 – 41)
- Before connecting the projector to the computer, be sure to check the following settings.
  - Operation is not guaranteed for all wireless LAN adapters and built-in wireless LAN adapters.

### Wired LAN

#### Check 1  For LAN cable
- Is the cable properly connected?
- Use LAN cable that is compatible with category 5 or above.

#### Check 2  Wired LAN settings

**<Computer with a built-in wired LAN function>**
- Is your wired LAN switched on?

**<Computer with a built-in wired LAN function>**
- Is your wired LAN adapter properly recognized?
- Is your wired LAN adapter switched on?
- Install the wired LAN adapter driver beforehand.
  For details on how to install the driver, refer to the instructions accompanying the wired LAN adapter.

### Wireless LAN

#### Check 1  Wireless LAN settings

**<Computer with a built-in wireless LAN function>**
- Is your wireless LAN switched on?

**<Computer without a built-in wireless LAN function>**
- Is your wireless LAN adapter properly recognized?
- Is the wireless LAN adapter switched on?
- Install the wireless LAN adapter driver beforehand.
  For details on how to install the driver, refer to the instructions accompanying the wireless card.

#### Check 2  Computer’s settings

- When security (firewall) software and utilities for network cards are installed, these may prevent connection of the projector.

**<Windows XP/Windows Vista/Windows 7>**
- Is Network Bridge enabled?
- Has your firewall been disabled?

### For WebBrowser

- WebBrowser is necessary to use WEB control.
- Compatible OS : Windows XP/Windows Vista/Windows 7, Mac OS X v10.4/v10.5/v10.6
- Compatible WebBrowser : Internet Explorer 6.0/7.0/8.0, Safari 2.0/3.0/4.0 (Mac OS)

**Note**

Do not touch the LAN terminal or the metal part of the LAN cable, the static electricity may discharge from our hand (body) causing a malfunction.
NETWORK menu

■ PROJECTOR NAME → See page 10
  You can change the name of the projector.

■ WIRED LAN → See page 11
  You can make detailed wired LAN settings.

■ WIRELESS LAN *→ See page 12
  You can make detailed wireless LAN settings.

■ NETWORK CONTROL → See page 15
  This sets the network control method.

■ NETWORK PASSWORD → See page 16
  Set this to [ON] if you want to restrict the connection by setting a password when connecting with the projector using the “Wireless Manager mobile edition 5.5”.
  (Default: OFF)

■ NETWORK PASSWORD CHANGE → See page 16
  You can change the password for the network connection.

■ LIVE MODE CUT IN → See page 17
  Set this to [ON] if you allow another user in the live mode to cut in while you are in the live mode (sending the screen images) using the “Wireless Manager mobile edition 5.5”.
  (Default: OFF)

■ COMPUTER SEARCH *→ See page 17
  You can search computers that can connect using the “Wireless Manager mobile edition 5.5”.

■ MULTI-LIVE → See page 17
  Use this when connecting with a computer using the “Wireless Manager mobile edition 5.5”.

■ NETWORK STATUS → See page 18
  This displays the network status of the main unit.

* You can configure settings when the wireless module (ET-WM200E/ET-WM200U) is mounted.
When making a connection between a computer and a projector with settings other than the default settings, perform the procedure below to display the menu required when changing the initial settings.

**Displaying the NETWORK menu**

1. **Press the <MENU> button on the projector.**
   The main menu appears.

   ![Main Menu](image)

2. **Select [NETWORK] with the ▲▼ buttons.**
   The network menu appears.

   ![Network Menu](image)

3. **Press the <ENTER> button.**
   You can select the sub-menu item.

   ![Enter](image)

   **Note**
   Unavailable items on the menu screen are grayed out and cannot be selected.
NETWORK menu (continued)

**PROJECTOR NAME**

You can change the projector name to be displayed on the network.

1. Select [PROJECTOR NAME] in the NETWORK menu and press the <ENTER> button.

2. Select characters with the ◄►▲▼ buttons and press the <ENTER> button to enter the projector name. You can delete the letter immediately before the cursor in the entry box by selecting [BS].

3. Select [OK] with the ◄►▲▼ buttons and press the <ENTER> button. Select [CANCEL] to undo the changes and then press the <ENTER> button.

**Note**

When you use the “Wireless Manager mobile edition 5.5”, only up to eight letters from the beginning of the projector name are displayed. We recommend that you set the projector name using eight letters or less for identification.
You can make detailed wired LAN settings.

1. Press ▲▼ to select [WIRED LAN], and press <ENTER> button.

2. Press ▲▼ to select an item, and change the setting according to the instructions.

3. Press ▲▼ to select [STORE], and press <ENTER> button.

Note
- Before using the DHCP server, make sure the DHCP server is already functioning.
- For details of IP address, subnet mask, and gateway, ask the network administrator.

Default wired LAN settings
The following settings are set before the projector leaves the factory.

<table>
<thead>
<tr>
<th>Item</th>
<th>Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>DHCP</td>
<td>OFF</td>
</tr>
<tr>
<td>IP ADDRESS</td>
<td>192.168.10.100</td>
</tr>
<tr>
<td>SUBNET MASK</td>
<td>255.255.255.0</td>
</tr>
<tr>
<td>DEFAULT GATEWAY</td>
<td>192.168.10.1</td>
</tr>
</tbody>
</table>
Setting network number

1. Select [WIRELESS LAN] with the ▲▼ buttons.

2. Select the number to be connected with the ◄► buttons.

- Network number [OFF], [S-MAP], [1]-[4], [USER1]-[USER3]

**Note**
- Selecting [OFF] disables the wireless LAN.
- Network number: [S-MAP] and [1]-[4] are available only when connecting via wireless LAN with the application software the “Wireless Manager mobile edition 5.5”.

**USER settings**

You can configure more precise network settings, if you select from [USER1] to [USER3] (user) for [WIRELESS LAN] in the network menu. For network settings, contact your network administrator.

**Configuration of wireless LAN (USER)**

1. Press ◄► to select [USER1] – [USER3], and press <ENTER> button.
Press ▲▼ to select an item, and change the setting according to the instructions.

| NAME CHANGE | You can change the user name. |
| DHCP *(DHCP client function)* | **ON:** If a DHCP server exists in the network to which the projector is connected, the IP address will automatically be acquired.  
**OFF:** If a DHCP server does not exist in the network to which the projector is connected, additionally set [IP ADDRESS *], [SUBNET MASK *] and [DEFAULT GATEWAY *]. |
| IP ADDRESS *(Display of IP address and setting)* | Enter the IP address if DHCP server is not used. |
| SUBNET MASK *(Displaying and setting the subnet mask)* | If not using a DHCP server, enter the subnet mask. |
| DEFAULT GATEWAY *(Display of gateway address and setting)* | Enter the gateway address if DHCP server is not used. |

* "Glossary" (See page 40 – 41)

**Note**

A wired LAN and wireless LAN cannot be used in the same segment.

Select [NEXT] on the [WIRELESS LAN] screen (1/2) to switch to the [WIRELESS LAN] configuration screen (2/2). Make the settings related to the wireless connection between the projector and the network. Select [CANCEL] instead of [NEXT] to cancel the configuration change.

**SSID**: If the mode is [AD HOC], enter the same character string as that of SSID set on the computer to be connected. If the mode is [INFRASTRUCTURE *], enter the SSID registered at the access point *.

**Note**

- SSID has to be entered in alphanumeric letters.
- You cannot set “any” or “ANY” for SSID.

**MODE**: Select [AD HOC] or [INFRASTRUCTURE].

- **AD HOC**: Connect projector and computer directly without access point.
- **INFRASTRUCTURE**: Connect through access point.

“Glossary” (See page 40 – 41)
NETWORK menu (continued)

● AUTHENTICATION
  : Set the user authentication method used by the network to be connected.
  OPEN : Select when making a connection using [AD HOC], or when the access point authentication method is OpenSystem *1.
  SHARED : Select when making a connection using [AD HOC], or when the access point authentication method is Shared Key *1.
  WPA-PSK *2 : Select when the access point authentication method is WPA-PSK *1.
  WPA2-PSK *2 : Select when the access point authentication method is WPA2-PSK *1.

● ENCRYPTION
  : Select the encryption method to be used for communication between the projector and the network.
  NONE : Select when transmit without encryption. It is selectable only when [AUTHENTICATION] is [OPEN] or [SHARED].
  WEP *1 : Select when ENCRYPTION is WEP.
  TKIP *1 : Select when ENCRYPTION is TKIP. Selectable when [AUTHENTICATION] is either [WPA-PSK] or [WPA2-PSK].
  AES *1 : Select when ENCRYPTION is AES. Selectable when [AUTHENTICATION] is either [WPA-PSK] or [WPA2-PSK].

*1: “Glossary” (See page 40 – 41)
*2: Available when the mode is set to [INFRASTRUCTURE].

Press [NEXT] after configuration is completed. Select [NEXT] if [WEP] is selected as the encryption method, and select [STORE] if [OPEN] is selected. At this point, select [RETURN] to go back to the previous screen (1/2), or select [CANCEL] to cancel the configuration change.

Note
• IEEE802.1x is not supported.
• Important video/audio data is protected because AES encryption processing takes place in advance for all network numbers, even if [ENCRYPTION] is set to [NONE].

If [WEP] is selected as the encryption method, then perform the additional configuration below.

When setting [OPEN] or [SHARED] as authentication and setting [WEP] as the encryption method:
  DEFAULT KEY : Set 1 – 4 numerals for the default key.
  KEY1 – 4 : Set these to match the WEP key registered in [DEFAULT KEY] and select [OK]. Either the 64-bit or 128-bit WEP key can be set. For the 64-bit key, input five alphanumerics (or a 10-digit string for the hexadecimal format) for the 128-bit key, input 13 alphanumerics (or a 26-digit string for the hexadecimal format).

When using [WPA-PSK] or [WPA2-PSK] : Set key and select [OK].
Input either 8 to 63 alphanumerics or a 64 digit string in the hexadecimal format.

Note
• If you are unable to connect to the wireless LAN through the access point even after performing the steps in “Projector settings (See page 19)”, contact the manufacturer of the access point.
## NETWORK menu (continued)

### Default settings of [USER1] - [USER3]

The following settings as [USER1] - [USER3] in the wireless LAN are set before the projector leaves the factory.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>SSID</td>
<td>Panasonic Projector</td>
</tr>
<tr>
<td>DHCP</td>
<td>OFF</td>
</tr>
<tr>
<td>IP ADDRESS</td>
<td>192.168.11.100</td>
</tr>
<tr>
<td>SUBNET MASK</td>
<td>255.255.255.0</td>
</tr>
<tr>
<td>DEFAULT GATEWAY</td>
<td>192.168.11.1</td>
</tr>
<tr>
<td>MODE</td>
<td>AD HOC</td>
</tr>
<tr>
<td>AUTHENTICATION</td>
<td>OPEN</td>
</tr>
<tr>
<td>ENCRYPTION</td>
<td>NONE</td>
</tr>
<tr>
<td>CHANNEL</td>
<td>11</td>
</tr>
</tbody>
</table>

### Press ▲▼ to select [STORE], and press <ENTER> button.

Save the current network settings.

**Note**

When configuration is completed, you need to select [STORE] and press the <ENTER> button. At this point, select [RETURN] to go back to the previous screen (2/3), or select [CANCEL] to cancel the configuration change.

### NETWORK CONTROL

Set when you want to control the projector from a computer connected to the network.

1. **Press ▲▼ to select [NETWORK CONTROL], and press <ENTER> button.**

   The [NETWORK CONTROL] screen will be displayed.

2. **Press ▲▼ to select items, and press ◄► to change the setting.**

   - **WEB CONTROL**
     - Set this to [ON] when you want to perform control with the Web browser.
   - **PJLink CONTROL**
     - Set this to [ON] when you want to perform control with the PJLink protocol.
   - **COMMAND CONTROL**
     - Set to [ON] to control using the control command via the serial terminal.→See page 38
   - **COMMAND PORT**
     - Set the port number used for the command control.
   - **STORE**
     - Save the current network control settings.

* If settings have been made without an administrator password of the Web browser control, add 2-byte “00” instead of STX, and a linefeed code (0Dh) instead of ETX. If settings have been made with an administrator password of the Web browser control, add a 32-byte hash value and “00” instead of STX and a line feed code (0Dh) instead of ETX. The hash value is created by MD5 combining “admin1:”, password, “:” and random numbers. The random numbers are 8-byte values sent from the projector when connecting.
NETWORK menu (continued)

NETWORK PASSWORD

Use this if you want to restrict the connection by setting the password when connecting with the projector using the “Wireless Manager mobile edition 5.5”. 
Set to [ON] if you want to perform the password check when connecting to the network.  
(Default : [OFF])

1 Select [NETWORK PASSWORD] at the network menu.

2 Select [ON] with the ◄► buttons.

   Note
   This setting is not used in the Logo Transfer Software and the Multi Projector Monitoring & Control Software.

NETWORK PASSWORD CHANGE

You can change the password for the network connection.

1 Select [NETWORK PASSWORD CHANGE] at the network menu and press the <ENTER> button.

2 Select characters with the ◄►▲▼ buttons and press the <ENTER> button to enter the password.
   You can delete the letter immediately before the cursor in the entry box by selecting [BS].

3 After entering the password, select [OK] and press the <ENTER> button.
   Select [CANCEL] to undo the changes and then press the <ENTER> button.

   Note
   It is recommended to change password on a regular basis for keeping it private.
LIVE MODE CUT IN

Set this to [ON] if you allow another user in the live mode to cut in while you are in the live mode (sending the screen images) using the “Wireless Manager mobile edition 5.5”. See the “Wireless Manager mobile edition 5.5” operation manual for details.

1. Select [LIVE MODE CUT IN] at the network menu.

2. Select [ON] or [OFF] with the ◄► buttons.

COMPUTER SEARCH *

You can search computers that can connect using the “Wireless Manager mobile edition 5.5”. See the “Wireless Manager mobile edition 5.5” operation manual for details.

* You can configure settings when the wireless module (ET-WM200E/ET-WM200U) is mounted.

Select [COMPUTER SEARCH] from the network menu, and then press <ENTER>.

MULTI-LIVE

Switch to the MULTI-LIVE mode when using the “Wireless Manager mobile edition 5.5”. See the “Wireless Manager mobile edition 5.5” operation manual for details.

Select [MULTI-LIVE] from the network menu, and then press <ENTER>.
**NETWORK STATUS**

Displays the current network status.

Press ▲▼ to select [NETWORK STATUS], and press <ENTER> button.

Switch between the wired LAN screen and the wireless LAN screen with ◄► buttons.

The status of the following will appear.

<table>
<thead>
<tr>
<th>PROJECCTOR NAME</th>
<th>(See page 10)</th>
</tr>
</thead>
<tbody>
<tr>
<td>NETWORK ID</td>
<td>Even if there are two or more projectors with the same name, an ID ([Proj] + 4-digit number) is assigned to each projector to enable the projectors to be identified.</td>
</tr>
</tbody>
</table>

* "Glossary" (See page 40 – 41)
Connecting with Wired LAN

**Computer operation**

Connection can be made with wired LAN. However, confirm to your system administrator on network settings before changing any settings.

1. **Turn on the computer.**

2. **Make the network setting according to your system administrator.**
   
   If the projector settings are the default settings (See page 11), the computer can be used with the following network settings.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>IP ADDRESS</strong></td>
<td>192.168.10.101</td>
</tr>
<tr>
<td><strong>SUBNET MASK</strong></td>
<td>255.255.255.0</td>
</tr>
<tr>
<td><strong>DEFAULT GATEWAY</strong></td>
<td>192.168.10.1</td>
</tr>
</tbody>
</table>

Connecting with Wireless LAN

You can configure settings when the wireless module (ET-WM200E/ET-WM200U) is mounted.

**Projector settings**

1. **Turn on the projector and press the <NETWORK> button on the remote control.**

2. **Press the menu button to open the [NETWORK] menu, and then select from among [USER1] through [USER3] for [WIRELESS LAN] and press <ENTER>.**

3. **In the configuration of wireless LAN, set [DHCP *], [IP ADDRESS *], [SUBNET MASK *], [DEFAULT GATEWAY *], [SSID *], [MODE], [AUTHENTICATION], [ENCRYPTION], and [CHANNEL]. For details, see “USER settings” of “WIRELESS LAN” (See page 12).**

<table>
<thead>
<tr>
<th>Setting</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>DHCP</strong></td>
<td>OFF</td>
</tr>
<tr>
<td><strong>IP ADDRESS</strong></td>
<td>192.168.11.100</td>
</tr>

</tbody>
</table>

**Note**

- Wireless LAN and wired LAN cannot be used in the same segment.
- When multiple devices are connected, a unique IP address must be allocated to each device.
- SSID has to be entered in alphanumeric letters.
- You cannot set “any” or “ANY” for SSID.
- The following settings are set before the projector leaves the factory.
Connecting with Wireless LAN (continued)

Computer operation

1 Make the network setting according to your system administrator.
   If the projector settings are the default settings (See page 15), then the computer can be used with the following network settings.

   | IP ADDRESS   | 192.168.11.101 |
   | SUBNET MASK  | 255.255.255.0  |
   | DEFAULT GATEWAY | 192.168.11.1 |

2 Click [Start]→[Connect To *]→[Wireless Network Connection *], select the wireless network of [SSID] set with the projector, and then click [Connect *].

   If the projector setting is the factory setting, then [SSID] is [Panasonic Projector].

* The names are for Windows XP. In Windows Vista/Windows 7, the procedure will be [Start]→[Connect To].

**Note**

- If you use any wireless utility other than Windows [Wireless Network Connection], follow its operation procedure for connection.
- If you use the access point, configure the projector and each network setting of the computer following the instruction of the network administrator.
Using Web Browser

Accessing from the Web browser

1 Activate the Web browser in the personal computer.

2 Enter the IP address set by the projector into the URL input field of the Web browser.

3 Enter your “User name” and “Password”.
The factory default settings are user1 (user privileges) or admin1 (administrator privileges) for the use name and panasonic (lowercase letters) for the password.

4 Click [OK] to display the Projector status page.

Note

- Avoid activating two or more Web browser simultaneously to work out setting or control actions.
- Change the password first of all.
- Administrator privileges enable the use of all functions. User privileges enable the use of only “Projector status”, “Network status”, “Access error log”, “Basic control”, and “Change password”.
- If the password is incorrectly entered three times in a row, the lock is set for several minutes.
- If you want to control the projector using a Web browser, set [WEB CONTROL] in the network menu to [ON].
Using Web Browser (continued)

Projector status page

Click [Status], then [Projector status] to display the Status information page. This page displays the projector statuses established for the items shown below.

1. Displays the type of projector.
2. Displays the firmware version of the projector main unit.
3. Displays the input switching status.
4. Displays temperature of projector’s intake air.
5. Displays temperature inside the projector.
6. Displays the AROUND LAMP TEMPERATURE.
7. Displays the lamp lit hours.
9. Displays used hours of the projector.
Using Web Browser (continued)

Error information page

If [Error (Detail)] is displayed in the self-diagnosis information display column on the [Projector status] screen, click the part to display the details of the error.

- Depending on the nature of the error, the projector may be placed in the standby mode for its own protection.

The ACCESS ERROR INFORMATION/ACCESS INFORMATION displays the past several thousand accesses/requests. If many accesses/requests are made at a time, some of them may not be found in the information. Check the ACCESS ERROR INFORMATION/ACCESS INFORMATION regularly.
Using Web Browser (continued)

**Network status page**
Displays the current configuration information of the network.

![Network status page](image)

① Displays the configuration details of wireless LAN.
  - You can configure settings when the wireless module (ET-WM200E/ET-WM200U) is mounted.

② Displays the configuration details of wired LAN.

**Access error log page**
Displays the error log of the WEB server such as access to a page that does not exist, or access with invalid user name or password.

![Access error log page](image)
Access log page
Displays the user name who accessed a WEB control page, the access source IP address, and access time, etc.
Basic control page
To move from another page, click [Projector control], then [Basic control].

1. Page selection tabs
   Click these to switch pages.
2. This displays the on-screen status. It is displayed even if the on-screen display of the projector is set to off.
3. Monitor information button
   Click this item, and the status of the projector is displayed.
4. Detailed set up button
   Click this item to display the advanced settings page.
5. Change password button

1. Power On/Off control
2. Turn off the projection temporarily.
3. Volume control
4. System type switching
5. Use these to select the input signals.
Using Web Browser (continued)

**Detail control page**

Click [Projector control], then [Detail control] to display the Detail control page.

1. Pressing these buttons controls the projector and updates the on-screen description on the right of the control page when control is finished.
2. Test pattern display
3. This button updates the on-screen description on the right of the control page with the latest information.
4. Menu display
Using Web Browser (continued)

Change Password page
Click [Change password].

Administrator mode

User account

User mode
A user can change password only.

Note
When changing the administrator account, both “Current user name” and “Current password” are required.
Using Web Browser (continued)

Network config page
You can make detail network settings on projector, when connecting without the administrator authority or when connecting through an access point (infrastructure mode).

■ LAN settings

1. Click [Detailed set up] in the menu.

2. Select the items to change and click [Next]. The settings window appears, showing the current settings.
   - To change the LAN settings, click [Change].
   - To return to the previous window, click [Back].
   The details of the configuration are the same as the configuration set in the [NETWORK] menu of the projector.
   - WIRED LAN (See page 11)
   - WIRELESS LAN (See page 12)

3. Complete the detailed settings and click [Next]. When [Next] is clicked, the next page appears, enabling you to complete the detailed settings as desired. After all required items have been entered, a confirmation window appears.

4. Click [Submit]. The settings will be registered.
Making the above settings effective (Only for wireless LAN)
Select [WIRELESS LAN] in the network menu of the projector, and use the ► buttons to select the network set in this page.

Note
- Important video/audio data is protected because AES encryption processing takes place.
- If you have changed the LAN settings that are currently in use, the connection may break off.
Using Web Browser (continued)

**Adjust clock page**

Click [Detailed set up], then [Adjust clock] to display the Adjust clock page.

- **Time zone selection**
- **Button to update time zone setting**
- **Turn this [ON] to set the date and time automatically.**

**Note**

If the time becomes incorrect immediately after setting the correct time, then the battery needs to be changed. Contact the dealer where you bought the projector to have the battery changed.

**Ping test page**

This page makes it possible to check whether the network is connected to the e-mail server, POP server, DNS server, etc.

Click [Detailed set up], then [Ping test] to display the Ping test page.

- **Enter the IP address of the server to be tested.**
- **Button for conducting the test.**

Display which appears when the connection was successful.

PING 192.245.80.20 (192.245.80.20) 56 data bytes
64 bytes from 192.245.80.20: seq=0 ttl=64 time=0.817 ms
64 bytes from 192.245.80.20: seq=1 ttl=64 time=0.817 ms
64 bytes from 192.245.80.20: seq=2 ttl=64 time=0.817 ms
64 bytes from 192.245.80.20: seq=3 ttl=64 time=0.817 ms
--- 192.245.80.20 ping statistics ---
4 packets transmitted, 4 packets received, 0% packet loss
round-trip min/avg/max = 0.817/0.817/0.817 ms

Display which appears when the connection failed.

PING 192.245.80.11 (192.245.80.11) 56 data bytes
--- 192.245.80.11 ping statistics ---
4 packets transmitted, 0 packets received, 100% packet loss
Using Web Browser (continued)

E-mail setup page

With this projector, if a problem occurs or if the lamp usage time reaches a set value, an e-mail message can be sent to one or more preset e-mail addresses (maximum two addresses). Click [Detailed set up], then [E-mail set up] to display the E-mail setup page.

Select Enable to use the e-mail function.

Enter the IP address or server name of the e-mail server (SMTP). The DNS server must be set if the server name is entered.

Enter the e-mail address of the projector. (maximum 63 characters)

The user can enter the location of, for example, the installed projector so that the recipient may easily identify the originator of the e-mail. (maximum 63 characters)

The user can modify the minimum time interval of temperature warning mail. The default value is 60 minutes. In this case, the user cannot send another mail for 60 minutes after sending previous temperature warning mail even the set warning temperature is reached again.

Select the temperature of the intake sensor at which to send a warning message.

Enter the e-mail address of your desired recipient.

Select the conditions for sending e-mail.

MAIL CONTENTS: Select [NORMAL] or [SIMPLE].

ERROR: An error is detected by self-diagnosis.

LAMP RUNTIME: Remaining lamp service time has reached the value set in the field.

INTAKE AIR TEMPERATURE: Intake air temperature has reached the value set in the field.
Using Web Browser (continued)

E-mail setup page (continued)

Check these boxes when e-mail is to be sent periodically to the second e-mail address. E-mail will be sent at the times and on the days checked.
Enter the e-mail address to which the e-mail is to be sent when two e-mail addresses are going to be used. Do not enter it when the second e-mail address is not going to be used.

Select the conditions for sending e-mail to the second e-mail address.

**MAIL CONTENTS:** Select [NORMAL] or [SIMPLE].

**ERROR:** An error is detected by self-diagnosis.

**LAMP RUNTIME:** Remaining lamp service time has reached the value set in the field.

**INTAKE AIR TEMPERATURE:** Intake air temperature has reached the value set in the field.

Check these boxes when e-mail is to be sent periodically to the second e-mail address. E-mail will be sent at the times and on the days checked.

Button to update settings
Using Web Browser (continued)

Authentication set up page

The POP/SMTP server is set on this page when POP/SMTP authentication is required for mail transmissions. Click [Detailed set up], then [Authentication set up] to display the Authentication server setup page.

① Select the authentication method specified by your Internet service provider.
② Set this if SMTP authentication has been selected.
③ POP server name field
   Available input characters: Alphabetic characters (A - Z, a - z, 0 - 9), hyphen (-), period (.).
④ POP/SMTP server user name field
⑤ POP/SMTP server password field
⑥ Enter the port number for the SMTP server (normally “25”).
⑦ Enter the port number for the POP server (normally “110”).
⑧ Button to update settings
Using Web Browser (continued)

PJLink protocol

The network function of the projector supports PJLink class 1, and the PJLink protocol can be used to perform projector setting and projector status query operations from a computer.

Control commands

The following table lists the PJLink protocol commands that can be used to control the projector.

<table>
<thead>
<tr>
<th>Command</th>
<th>Control details</th>
<th>Notes</th>
</tr>
</thead>
</table>
| POWR | Power supply control | Parameters  
0 = Standby  
1 = Power ON |
| POWR ? | Power supply status query | Parameters  
0 = Standby  
1 = Power ON  
2 = Cool-down in progress  
3 = Warm-up in progress |
| INPT | Input selection | Parameters |
| INPT ? | Input selection query | Parameters  
11 = RGB1  
12 = RGB2  
21 = VIDEO  
22 = S-VIDEO  
31 = DVI-D  
32 = HDMI  
51 = NETWORK |
| AVMT | AV MUTE control | Parameters |
| AVMT ? | AV MUTE status query | Parameters  
30 = AV MUTE mode off  
31 = AV MUTE mode on |
| ERST ? | Error status query | Parameters  
1st byte : Indicates fan errors, range 0 – 2  
2nd byte : Indicates lamp errors, range 0 – 2  
3rd byte : Indicates temperature errors, range 0 – 2  
4th byte : Fixed at 0  
5th byte : Indicates filter errors, range 0 – 2  
6th byte : Indicates other errors, range 0 – 2  
Definitions for each value from 0 to 2 are as follows.  
0 = No error known  
1 = Warning  
2 = Error |
| LAMP ? | Lamp status query | Parameters  
1st digits (1 – 5 digits) : Lamp cumulative operating time  
2nd digit : 0 = Lamp off, 1 = Lamp on |
| INST ? | Input selection list query | The following are returned as parameters.  
“11 12 21 22 31 32 51” |
| NAME ? | Projector name query | The name set for [PROJECTOR NAME] in [NETWORK SETUP] is returned. |
| INF1 ? | Manufacturer name query | “Panasonic” is returned. |
| INF2 ? | Model name query | “DZ570E/DZ570U”, “DX500E/DX500U” or “DW530E/DW530U” is returned. |
| INF0 ? | Other information query | Information such as version number is returned. |
| CLSS ? | Class information query | “1” is returned. |

PJLink security authorization

When using PJLink with security authorization, either of the password set for administrator privileges and the password set for user privileges with Web browser control can be used as the password for PJLink.

When using PJLink without security authorization, set use without the password for administrator privileges and the password for user privileges of Web browser control.

- For specifications regarding PJLink, refer to the Japan Business Machine and Information System Industries Association website.
- URL http://pjlink.jbmia.or.jp/
Control commands via LAN

When WEB Control administrator rights password is set (Protect mode)

Connection method

1) Obtain the IP address and port number (Initial set value = 1024) of the projector and make a request for connection to the projector.

You can obtain both IP address and port number from the menu screen of the projector.

**IP address**: Obtain from MAIN MENU → [NETWORK] → [NETWORK STATUS]

**Port No.**: Obtain from MAIN MENU → [NETWORK] → [NETWORK CONTROL] → [COMMAND PORT]

2) There is a response from the projector.

Response data

<table>

<tr>
<td>9 bytes</td>
<td>1 byte</td>
<td>1 byte</td>
<td>1 byte</td>
<td>8 bytes</td>
<td>1 byte</td>
</tr>
</tbody>
</table>

Mode : 1 = Protect mode

3) Generate a 32-byte hash value from the following data using MD5 algorithm.

“xxxxxx:yyyyy:zzzzzzzz”

**xxxxxx**: Administrator rights user name for WEB CONTROL (Default user name is “admin1”)

**yyyyy**: Password of above administrator rights user (Default password is “panasonic”)

**zzzzzzzz**: 8-byte random number obtained in Step 2)

Command transmission method

Transmit using the following command format.

<tbody>
<tr>
<td>WEP</td>
<td>Abbreviation for Wired Equivalent Privacy. This is a method for encrypting communication data. The encryption key is created and notified only to the communicating user, so the communication data cannot be decrypted by a third party.</td>
<td>14</td>
</tr>
<tr>
<td>WPA-PSK</td>
<td>This is a standard covering encryption methods used in wireless LAN. It provides greater security than WEP, and has functions such as a user authentication function and also TKIP (encryption protocol) which automatically changes the encryption key at fixed intervals. And this authentication requires no authentication server.</td>
