COMPLETE AIR MANAGEMENT SYSTEM

SECOND EDITION

CONCEPT BOOK

Second edition: May 2021

QUALITY AIR FOR LIFE

COMPLETE AIR MANAGEMENT SYSTEM

Fresh Air
Management

Full-Auto
Algorithm

User-Friendly
Control

Energy
Saving

The Complete Air Management System controls your indoor environment automatically, sensing the presence of people and their activities and helping keep everyone comfortable.

Note: Illustrations of app screens may differ from actual screen appearance.

Inside the home what air needs to be clean for us to live healthy lives?

We spend more time in the bedroom than in any other room.
Keeping contaminants out and maintaining clean air at a comfortable temperature and humidity can help us sleep well.
A comfortable living environment contributes to healthy living.

We spend the most time in the **Bedroom**

Invisible issues with indoor air environments

Even though you can't see it, the air in your home and other indoor environments can easily get dirty. Polluted air flows in unnoticed from the outside, and chemicals are emitted by building materials and furniture. Also, CO₂ concentration rises as people breathe, while the humidity level increases as perspiration evaporates. All these factors will gradually make the room less comfortable.

Three key elements for maintaining air quality in any indoor environment

	1. Control temperature and humidity.	 Air conditioning
	2. Exhaust contaminated indoor air and filter contaminants out of outdoor air then bring it in.	 Ventilation
	3. Inhibit particulate matter, allergens, mould, viruses and odours to make spaces more comfortable.	 nanoe™ X technology
	Remote control wireless LAN-connectable air conditioners and ventilation from anywhere via smartphone apps.	 Panasonic Comfort Cloud

Issue

Even if you turn on the air conditioner on a warm evening, if the humidity is high, you may be uncomfortable and wake up in the middle of the night.

Cooling & Humidity

Solutions

Air conditioning

Using dry mode, you can enjoy a comfortable sleep even on a humid night.

Air conditioner

Equipped with temperature and humidity sensors

Issue

If there are small children in the family, it's important to inhibit allergens, mould, and unpleasant odours in the bedroom.

Allergens & Odours

Solutions

nanoe™ X technology

nanoe™ X technology is effective against allergens and unpleasant odours in the bedroom.

Air conditioner

Operation of an air conditioner equipped with humidity sensors

* Comparison of iAUTO-X Mode & normal COOL mode by using 1.5HP X-PREMIUM INVERTER Model
iAUTO-X Mode: iAUTO-X Mode, Outside temperature: 35°C/24°C / Remote setting temperature: 25°C, with Fan Speed: Auto / Horizontal Airflow direction: Auto / Vertical Airflow direction: Straight
Normal Cool Mode: Cool Mode, Outside temperature: 35°C/24°C / Remote setting temperature: 25°C, with Fan Speed: High / Horizontal Airflow direction: Middle / Vertical Airflow direction: Straight
Average Room RH is measured every 1 hour up to 4th hour (under stable condition). At Panasonic Amenity Room (size: 16.6m²) The effect differs according to conditions in installation and usage.

Cold air blows out strongly on start-up for rapid cooling, keeping the room at a comfortable temperature.

When the room reaches the set temperature, the airflow automatically switches to ceiling airflow so that cold air doesn't hit the body directly and occupants don't get too cold even when the air conditioner is operated for a long time.

Humidity in the room is automatically controlled so it remains stable and comfortable at bedtime.

When relative humidity is high even though the temperature is low, the risk of heat stroke may increase. The humidity sensor constantly monitors and adjusts relative humidity levels to below 60% for an optimal sleeping environment, so you can enjoy better sleep thanks to comfortable cooling.

Air conditioner with nanoe™ X technology

Panasonic's unique nanoe™ X technology is very effective against various pollutants. It inhibits bacteria and viruses, molds, allergens, pollen, and other hazardous substances, deodorises, and has a moisturizing effect on hair and skin. nanoe™ X technology makes the air quality in your environment better.

Hope for the creation of more comfortable spaces for those who have problems with asthma or atopic dermatitis
We have experimental results that show nanoe™ X is capable of inhibiting allergens, such as pollen and dust mites. It is important to take precautions against the allergens that we inadvertently inhale in our daily lives. As nanoe™ X is effective in inhibiting invisible allergens, we can expect it will create a cleaner environment. As the safety of nanoe™ X has also been verified, nanoe™ X gives peace of mind to families with small children.*
* Experimental results show that nanoe™ X is effective in inhibiting the growth of the following types of mould commonly found in homes: Cladosporium, Aspergillus, Penicillium, Alternaria, Fusarium, Eurotium, Mucor, and Stachybotrys.
** The above indications and statements are made in reference to available information.
Professor Masahiro Sakaguchi
Laboratory of Veterinary Microbiology I,
School of Veterinary Medicine, Azabu University

Testing organisation: Panasonic Product Analysis Center. Test method: Electrophoresis in an approximately 23 m³-sized test room. Inhibition method: nanoe™ released. Target substances: Dermatophagoides pteronyssinus, Dermatophagoides farina, Cedar, Cypress, Orchard grass, Ragweed, Alnus japonica, Japanese white birch, Artemisia, Olive, Juniper, Casuarina, Miscanthus, Timothy grass, Humulus japonicus, Alternaria, Aspergillus, Candida, Malassezia, Cockroach, Moth, Dog (dander), Cat (dander). Test result: inhibitory effect verified in 24 hours.

Issue

PM 2.5 coming in the window and dust from the bedding is a concern.

PM 2.5 & Dust

Outdoors & indoors

Issue

When the bedroom door is closed, CO₂ concentrations are rising, a concern.

CO₂

Indoors

Ventilation

Solutions

Ventilation

Ventilation fan

Ventilation fan

Bring in fresh air with a filter-equipped supply fan to maintain a comfortable indoor environment.

Prevent the entry of hazardous substances contained in outdoor air, expelling house dust.

Fill the room with fresh air from which PM 2.5 has been removed.

A supply fan with filter can remove PM 2.5, bringing fresh air indoors.

PM 2.5 (ug/m³)

Supply fan ON

Without ventilation

With ventilation

Within about 2 hours of turning on the supply fan, indoor air quality reaches Japan's indoor environmental standards.

With the supply fan off, the PM 2.5 level is the same as outside.

Japan Standard 35ug/m³

Outdoor air quality is poor. Without ventilation indoor PM 2.5 level is 269-270 ug/m³. With ventilation, indoor PM 2.5 level improves to 49 ug/m³ (8140 min, 26 ug/m³ 8100min), reaching Japan standards.

Solutions

Ventilation

Ventilation fan

Ventilation fan

Sensors detect rising CO₂ concentration. Fresh air is supplied, controlling CO₂ concentration.

Push out accumulated CO₂ with fresh air

Filter

CO₂

It has been verified that increased CO₂ concentration caused by breathing can be reduced to appropriate levels with a supply fan.

CO₂ test results

Without ventilation

With ventilation

AQ100

Without ventilation, CO₂ concentrations rise continuously.

With ventilation, indoor CO₂ concentration improves to 1000 ppm within 90 minutes. Without ventilation, indoor CO₂ concentration increases as 3 persons breathe. After 90 minutes, CO₂ concentration is 1800 ppm.

Ceiling-mounted supply fan

Air is supplied with a fan, while exhaust occurs naturally.

Energy saving

With a DC motor, performance is improved, and more precise airflow control is achieved.

Space saving

Thanks to a height of just 206mm, installation space is minimised.

Installation case

Baccas in Setia Ecohill 2 built by SP Setia (Malaysia)

PM 2.5 removal Up to 95%

A filter removes PM 2.5 to ensure that only fresh, clean air can enter the room. Note: Chinese market model tested

COMPLETE AIR MANAGEMENT SYSTEM

Four features of the Complete Air Management System

Fresh Air Management

Full-Auto Algorithm

User-Friendly Control

Energy Saving

Fresh Air Management Quickly inhibits airborne contaminants to maintain air quality**Full-Auto Algorithm** Automatically controls and constantly monitors**User-Friendly Control** Allows easy control of your system**Energy Saving** Minimises operational load on the air conditioning

Full-Auto Algorithm

Automatically controls and constantly monitors

Fresh Air Management

Full-Auto Algorithm

User-Friendly Control

Energy Saving

Sensing air quality

Flow of sensing

Constant monitoring of air quality with IAQ sensors, automatically controlling heating & cooling and airflow.

Note: After initialization, sensing proceeds in this order: temperature, humidity, CO₂, then PM 2.5.

Rapid heating and cooling and air purification is possible.

HOT

To make cooling efficient, ventilation air volume is set to OFF until temperature goes down.

PRODUCT	Conventional operation (Auto mode)	COMPLETE AIR MANAGEMENT SYSTEM
AC	MAX	MAX
IAQ	MAX	Low/OFF

DIRTY

When PM 2.5 or CO₂ level is high, Complete Air Management System works to adjust air volume to purify. When ventilation air volume is high, air conditioning air volume is also high to maintain temperature.

PRODUCT	Conventional operation (Auto mode)	COMPLETE AIR MANAGEMENT SYSTEM
AC	Low/OFF	MAX
IAQ	MAX	MAX

Ventilation air volume can be set to match CO₂ concentration

IAQ remote controller

Visualising fresh air, enjoy safe and secure air quality.

IAQ information visualised

- 4 sensors (temperature, humidity, PM 2.5, CO₂)
- Precise air volume control at 5 levels
- Remote control from anywhere via smartphone apps

Sensing and control

- Based on IAQ information, ventilation is automatically controlled.
- Ventilation volume regulated based on CO₂ levels detected by sensing.

Energy Saving

Minimises operational load on the air conditioning

Bringing fresh air into your environment is important because it can introduce oxygen and expel CO₂ and PM 2.5 maintaining clean indoor air quality. With a ventilation fan, you can bring in the fresh air required and minimise operational load on the air conditioning.

However, the fresh air outside is hot in summer and cold in winter...

With the Complete Air Management System, fresh air is introduced as required depending on the indoor CO₂ concentration level, and air conditioner operational load is minimised.

Simulation of heat load by means of ventilation

24-hour automated control operation

Controlling your indoor environment automatically sensing the presence of people and their activities and helping keep everyone comfortable

Note: XU series room air conditioner as compared to PU series product or, in Vietnam, QU series product.

User-Friendly Control

Allows easy control of your system

Comfort Cloud

Ease of operation

With Panasonic's Comfort Cloud app, the system can easily be controlled remotely.

Simple device registration

Easy 3-step pairing of air conditioners and ventilation fans

Home screen

- Device registration is simple.
- Add units for each room.
- Easily pair air conditioners and supply fans.

Registration and pairing of air conditioners and ventilation fans is simple.

Initial registration

- Register each device.
- Set pairing name as you like.

Pairing setup

- New pairing
- New device registration

Device status

- View list of connectable devices.
- Tap the + mark to register the device in the Complete Air Management System.

IAQ sensors: sensing air quality

Issue As more people are at home CO₂ concentrations rise and humidity can become uncomfortable.

Solutions

- Prevents rise in humidity when the set temperature is reached to prevent sleepless nights.

Comfort Cloud

Individual devices can also easily be controlled via Comfort Cloud.

Remote control wireless LAN-connectable air conditioners from anywhere via smartphone apps.

- Basic operation (ON/OFF, airflow switching, etc.)
- Power monitoring
- Multiple-user settings
- Troubleshooting alert notifications

With the Comfort Cloud app and air conditioners and supply fans with IAQ remote controller connected to a wireless LAN, you can monitor and control from anywhere with a smartphone. This solution is ideal for one system, one site, or multiple locations. The capacity to connect via the network to the Cloud makes it an ideal solution for both home and commercial applications.

nanoe™ X Stay safer indoors with 24-hour nanoe™ X air protection + Fan mode

Only 25 w/h
Note: Varies by model

nanoe™ X concentration simulation

nanoe™ X was tested in a 54 m³ (4 m x 5 m x 2.7 m) room for a duration of 30 mins. The bluer the colour, the more effective it is. Featuring a long lifespan and huge volumes of hydroxyl radicals contained in water, nanoe™ X can provide widespread coverage, especially in large spaces of 54 m³ or more, inhibiting airborne and surface pollutants throughout the area.

IAQ remote controller

Visualising fresh air, enjoy safe and secure air quality.

IAQ information visualised

- 4 sensors (temperature, humidity, PM 2.5, CO₂)
- Precise air volume control at 5 levels
- Remote control from anywhere via smartphone apps

Sensing and control

- Based on IAQ information, ventilation is automatically controlled.
- Ventilation volume regulated based on CO₂ levels detected by sensing.

Comfortable sleeping environment

Benefits of air conditioner humidity control for sleeping environments demonstrated

Test overview

- Tested device: Room air conditioner equipped with nanoe™ X (CS / CU-X229C)
- Test space: Two approximately 25m² rooms
- Test subjects: 6 men and 6 women, a total of 12 people aged 30-69
- Testing organization: TTC Co., Ltd.
- Test supervision: Dr. Shuichiro Shirakawa, Japan Sleep Assessment & Research Institute, Inc.
- Evaluation: A combination of quantitative objective evaluation and human-perceived subjective evaluation of night-time sleep quality using a test device, with and without humidity control, using a double-blind method to eliminate the placebo effect.
- Demonstration: Feeling of refreshment upon waking, fatigue relief and improved work efficiency attributable to improved sleep quality with heating and cooling control and with nanoe™ X control, airflow control, humidity control or CO₂ concentration control.

Humidity control is critical in creating a comfortable sleeping environment.

When humidity in the room is close to 80%, perspiration does not evaporate easily, and body temperature cannot be adjusted properly, which makes it difficult to fall asleep and makes you feel uncomfortable when you wake up. Controlling the humidity at 40-60% is important for a good night's sleep. Air conditioner humidity control was shown to improve sensations of alertness, motivation, mood, calmness, and appetite upon waking. Humidity control is essential for restful sleep.

Supervised by
Director, Japan Sleep Assessment & Research Institute, Inc.; Medical Doctor
Dr. Shuichiro Shirakawa

Director, Japan Sleep Assessment & Research Institute, Inc., and Visiting Professor at the Edogawa University Sleep Research Institute, Dr. Shirakawa is the Chairman of the Japan Organization for Better Sleep, and has seen his work as a pioneer of sleep research published in a range of media. Dr. Shirakawa has published books including Sleep Reading for Business Persons (Wedge), Sleep Deficits (Asahi Shimbun Publications), The Scientifically Correct and Fastest Way to Eliminate Life-Shortening Sleep Deficits (SHODENSHA Publishing), etc.

Evaluation of the impact of air conditioner humidity control on sleep

Conclusion

When the humidity was controlled while the subjects were sleeping, improvement was seen in the results of the questionnaire, in which 5 sensations upon waking were ranked on a 10-point scale.

Note: Visual is for illustration purposes.
