

Panasonic

Long Lasting Suction Power

MEGACYCLONE Long Lasting Suction Power

	MC-CL575	MC-CL573	MC-CL571
Input Power	2000 W	1800 W	1600 W
Soft Roller	Yes	Yes	Yes
Floor Nozzle	Full Capture Nozzle	Full Capture Nozzle	Floor Nozzle
Dust Capacity	2.2 L	2.2 L	2.2 L
Stainless Guard	No	No	No
Main Filter	HEPA	HEPA	HEPA
Exhaust Filter	HEPA	Normal	Normal
Handle	Ergonomic	Ergonomic	Straight
Extension Wand	Metal Telescopic	Metal x2	Plastic x2
Cord Length	5.0 m	5.0 m	5.0 m
Body Weight	5.1 kg	4.9 kg	4.8 kg
Accessories	Curtain Nozzle Crevice Nozzle Dusting Brush	Crevice Nozzle Dusting Brush	Crevice Nozzle Dusting Brush
Origin	Made in Malaysia	Made in Malaysia	Made in Malaysia

MEGACYCLONE

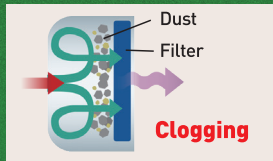

| 575 | 573 | 571 |

Cyclone centrifuges dust and maintains airflow

Exhaust air of conventional cyclone passes through the dust. Power tends to fall if dust accumulates. Mega Cyclone separates dust and air, then it puts away dust in big-capacity 2.2 L dust compartment firmly. Therefore, it prevents the filter from getting clogged, and keeps strong suction power lasting.

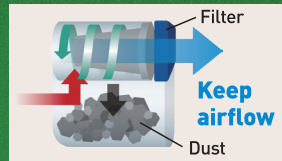

Cyclone system comparison

Conventional*

Dust accumulates in front of the filter, and suction power decreases.

*Panasonic MC-CL4 series

MEGACYCLONE

It is the structure that dust does not get the filter clogged.

New! Curtain Nozzle

| 575 | 573 | 571 |

Stress-free cleaning with the Curtain Nozzle

Efficiently vacuum various types of curtains

Polyester

Cotton

Knitted Nylon

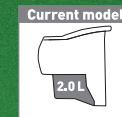

Velvet

Big Dust Capacity

| 575 | 573 | 571 |

Increases dust capacity

Reforms to the design eliminate wasted space to realize 10% bigger capacity than the previous model in a compact body.

How to empty dust compartment

Detach the dust compartment.

Move the beater lever to remove dust particles.

Open the dust compartment and empty it.

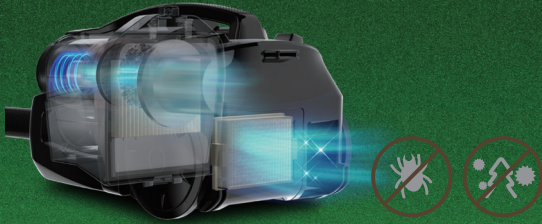

Similarly, remove remaining dust off crevice of HEPA filter.

Clean Exhaust

| 575 | 573 | 571 |

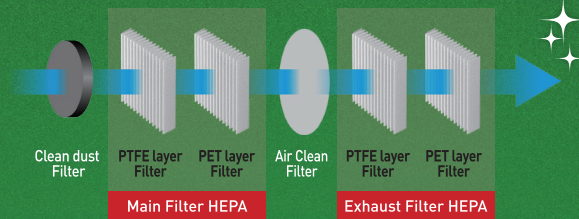

The Multiple Filtration System provides clean exhaust. Capture invisible allergens such as dust, mites, pollens and micro particle.

Capture dust particles via the multiple filtration system

Each layer of the filter captures not only dust residue but also allergens and pollen to exhaust clean air.

6-Layer Filtration System*

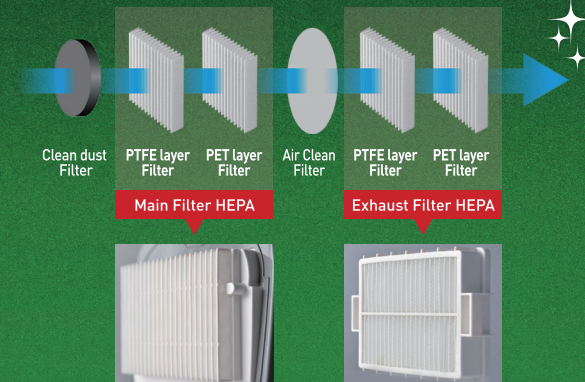

*The MC-CL573 and the MC-CL571 utilize 5-layer filtration.

Double HEPA Filter

| 575 | 573 | 571 |

Capture microscopic particles via the double HEPA filter for clean exhaust

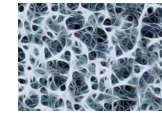

Two High-Efficiency Particulate Air (HEPA) filters positioned for high-performance capture even microscopic particles. Rest peacefully knowing the exhaust air is clean and free of invisible contaminants.

Fluorocarbon polymers

Highly dense materials trap even tiny particles of dust.

1. High filtration
2. Lower air loss
3. Easy to detach the dust
