AK-HC3800
Studio Handy Camera
AK-HC3800G (Tajimi connector model)
AK-HC3800GS (LEMO connector model)
A Studio and EFP Camera System for Broadcast Use That Delivers High-End Image Quality and Enables Long-Distance Optical Fiber Transmission at Low Cost.

This cost-effective HD camera system with optical fiber transmission capability meets the high-end TV program production needs of broadcast studios. The newly developed AK-HC3800 Studio Handy Camera is equipped with a high-sensitivity, high-quality 2/3 type 2.2 megapixel 3CCD and a new high-precision 16 bit A/D image processing circuit. The advanced digital functions such as Chromatic Aberration Compensation (CAC), Digital Extender, Film Rec Gamma, Dynamic Range Stretch (DRS) and etc. realize high image quality and versatile operations. By using the AK-HC3800 together with the AK-HCU200 Camera Control Unit, AK-HRP200G Remote Operation Panel and AK-HVF70G 17.8 cm (7 inches) LCD Color Viewfinder, an optical fiber transmission studio camera system that achieves high image quality, uncompressed and long-distance transmission, can be configured at a low cost. The camera and camera control unit can be connected for long-distance transmission of video signals over approximately 1,200 m (1,312 yards) when power is supplied from the camera control unit. The camera control unit and remote operation panel are connected either by a dedicated cable or an IP connection. Overall, the system offers excellent cost-performance and easy set-up.

* The photo shows a system example of the AK-HC3800GS (LEMO connector model).
* For studio zoom lens use, the lens support devices recommended by each lens manufacturer are required. The AK-HBU3500 build-up unit is not supported.
High Quality Images Achieved by a Newly Developed DSP. Advanced Digital Technology Allows Compact, Lightweight Lenses to meet Studio Production Needs.

3CCD with High Sensitivity, Low Noise and Low Smear
The 2/3 type 2.2 megapixel 3CCD enables the standard sensitivity of F11 (2,000 lx/59.94 Hz) which is one of the highest sensitivity in this range of cameras. A high S/N ratio of 60 dB (at 59.94 Hz) produces high quality images with low noise and low smear. Panasonic’s single-channel transfer system and spatial-offset processing technologies also improve signal modulation depth and reduce moire.

New High-Performance DSP Provides 16 bit A/D, 38 bit Processing
HD images are digitized with 74 MHz sampling and 16 bit A/D conversion. Full 38 bit processing within the DSP produces highly detailed, high quality images.

50 Hz/59.94 Hz Switchable
HD recording is switchable between 1080/59.94i and 1080/50i video formats. In addition, 720/59.94p*, 720/50p*, 1080/29.97PsF, and 1080/25PsF formats are also supported.

*The 720/59.94p and 720/50p formats must be selected at the CCU.

Chromatic Aberration Compensation (CAC)
This exclusive technology sets up a conversation between lens and camera which allows for a highly sophisticated algorithm to be deployed that will automatically compensate the registration error that is caused mainly by lens chromatic aberration, and minimize the circumjacent blur.

Film Rec Gamma and Scan Reverse Functions
Selectable gamma curves are included in the DSP circuit. The Film Rec mode produces the kind of film tone that you get with Panasonic VARICAM models. The Scan Reverse function cancels the image inversion that happens when using a Canon or Angenieux HD lens adaptor, and the AK-HC3800 supports interchangeable lenses for film cameras.

Digital Extender (2x)
This function expands the image by 2x in the digital signal processing circuit, allowing powerful shooting even with a low-magnification lens. HD images retain their superior resolution even with zooming, and — unlike when a lens extender is used — brightness is not reduced.

Dynamic Range Stretch (DRS)
The DRS function automatically suppresses blocked shadows and blown highlights. A gamma curve and knee slope are estimated to match the contrast of each pixel, and applied in real time. When dark, bright, and intermediate shades are all contained in the same scene, this produces excellent gradation for each shade. The images that result are enhanced by a visually wide dynamic range.

Other Advanced Digital Functions
- 12-axis color correction, linear matrix, and other color correction functions.
- Selectable EBU or NTSC preset matrix.
- A skin tone detail function with two skin tone settings.
- A lens file function (for up to 32 files) to save flare and shading values.
- Camera settings, such as VF settings, can be saved on an SD memory card. SD memory cards can also be used for firmware upgrades.
- Various information, including the color temperature setting, is displayed in the viewfinder.
Allows a High-Quality, Uncompressed, Long-Distance Optical Fiber Transmission Camera System to Be Configured at Low Cost

High-Definition, Long-Distance, Optical Digital Transmission

By connecting the CCU and the AK-HC3800 Studio Handy Camera by optical fiber cable, uncompressed digital signals can be transmitted with high quality. The cable between the camera and the CCU can be extended up to approximately 1,200 m (1,312 yards).*1

*1: When power is supplied from the CCU.

HD Multi-Format Supported

The AK-HCU200 is 59.94 Hz/50 Hz switchable, and supports 1080/59.94i, 1080/50i, 1080/29.97PsF,*2 1080/25PsF,*2 720/59.94p, and 720/50p HD formats.

*2: The 1080/29.97PsF and 1080/25PsF formats must be selected at the camera.

Prompter Supported

Two SDI channels and one VBS channel are provided for RET input, and prompter input (analog video signal input) is included as standard. Prompt signals input to the CCU can be output from the prompter terminal on the camera side.

HD/SD Simultaneous Operation

Two SDI OUT and two SDI OUT (PM) lines are provided. In addition to HD video signal output, SD downconverted video signal output (SDI, analog composite) comes as standard. SD monitoring is also possible.

IP Connection Camera Remote

Multiple AK-HRP200G Remote Operation Panels and up to 19 AK-HCU200 Camera Control Units can be routed through a hub with IP connection. Camera control units on a LAN can be freely controlled by the remote operation panels for highly versatile operation.

Compatibility with ROP/MSU

The AK-HRP935 Remote Operation Panel or AK-MSU935 Master Setup Unit can also be used for serial remote control of the AK-HCU200 camera control unit.*3

*3: Only functions that are supported by the CCU can be controlled by the AK-MSU935 or AK-HRP935.

2U Rack Mounting Size

The 2U height of this compact, lightweight unit allows 2U rack mounting.

Setting Up CCU with a PC

When connecting a CCU and PC by IP connection, the CCU set-up menu can be displayed and changed on the PC’s web browser.

Bar ID Display Output

Text can be superimposed onto the color bar output signal. Displaying the video source and other information in this way is convenient during system set-up and standby.

SD Memory Cards Supported

The SD memory card slot allows CCU setting data to be saved on an SD memory card. Firmware updates can also be handled by SD memory card.
