Operating Instruction and Cook Book
Microwave Oven
Household Use Only

Model Number: **NN-ST750W**
**NN-ST780W**

Please read these instructions carefully before using this product, and save this manual for future use.
We are glad you have chosen to purchase a PANASONIC microwave oven. Before operating this oven, please read these instructions carefully and completely, and keep them for further reference.

If you have only used a microwave oven for reheating and defrosting, with Panasonic’s Inverter Technology you can be reassured of excellent results when cooking a variety of foods, as the ‘soft’ penetration of microwave energy to the centre of food helps prevent over cooking on edges and surfaces. Foods can now be gently simmered without the concern of boil over.

After reading the introductory chapter, we are sure you will be able to master the basic techniques and thereby develop a firm understanding of your new oven. This book includes recipes from starters to desserts. After trying our recipes be sure to adapt your favourite recipes to microwave methods.

Start experimenting now, and enjoy the first class results you will achieve by using your new microwave oven.

Precautions to be taken when using Microwave Ovens for Heating foodstuffs

INSPECTION FOR DAMAGE. A microwave oven should only be used if an inspection confirms all of the following conditions:
1. The door fits squarely and securely and opens and closes smoothly.
2. The door hinges are in good condition.
3. The metal plates of a metal seal on the door are neither buckled nor deformed.
4. The door seals are neither covered with food nor have large burn marks.

PRECAUTIONS. Microwave radiation from microwave ovens can cause harmful effects if the following precautions are not taken:
1. Never tamper with or deactivate the interlocking devices on the door.
2. Never poke an object, particularly a metal object, through a grille or between the door and the oven while the oven is operating.
3. Never place saucepans, unopened cans or other heavy metal objects in the oven.
4. Do not let other metallic articles, e.g., fast food foil, touch the side of the oven.
5. Clean the oven cavity, the door and the seals with water and a mild detergent at regular intervals. Never use any form of abrasive cleaner that may scratch or scour surfaces around the door.
6. Always use the oven with trays or cookware recommended by the manufacturer.
7. Never operate the oven without a load (i.e., an absorbing material such as food or water) in the oven cavity unless specifically allowed in the manufacturer’s literature.
8. For horizontally hinged doors, never rest heavy objects such as food containers on the door while it is open.
9. Do not place sealed containers in microwave ovens. Baby bottles fitted with a screw cap or a teat are considered to be sealed containers.
10. This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.
11. Young children should be supervised to ensure that they do not play with the appliance.

Important Instructions

WARNING—To reduce the risk of burns, electric shock, fire, injury to persons or excessive microwave energy:
1. Read all instructions before using the microwave oven.
2. Some products such as whole eggs and sealed containers - (for example, closed glass jars and sealed baby bottles with teat) - may explode and should not be heated in the microwave oven.
3. Use this microwave oven only for its intended use as described in this manual.
4. As with any appliance, close supervision is necessary when used by children.
5. Do not operate this microwave oven if it is not working properly or if it has been damaged or dropped.
6. To reduce the risk of fire in the oven cavity: (a) Do not overcook food. Carefully attend microwave oven if paper, plastic, or other combustible materials are placed inside the oven to facilitate cooking.
(b) Heating therapeutic wheat bags is not recommended. If heating, do not leave unattended and follow manufacturer's instructions carefully.
(c) Remove wire twist-ties from bags before placing bag in oven.
(d) If materials inside the oven should ignite, keep oven door closed, turn oven off at the wall switch, or shut off power at the fuse or circuit breaker panel.
(e) Never leave microwave unattended while cooking or reheating.
7. Failure to maintain the oven in a clean condition could lead to deterioration of the surface that could adversely affect the life of the appliance and possibly result in a hazardous situation.

Earthing Instructions

This microwave oven must be earthed. In the event of an electrical short circuit, earthing reduces the risk of electric shock by providing an escape wire for the electric current. This microwave oven is equipped with a cord having an earthing wire with an earthing plug. The plug must be plugged into an outlet that is properly installed and earthed.

WARNING—Improper use of the earthing plug can result in a risk of electric shock.

(This statement applicable only to New Zealand.)

We certify that this microwave oven has been inspected and complies with the safety requirements of government notice 466 of March 1981, and complies with the Radio Regulation of government notice 587 of March 1986.
(This statement applicable only to South Africa)

WARNING
a) The door seals and door seal areas should be cleaned with a damp cloth. The appliance should be inspected for damage to the door seals and door seal areas and if these areas are damaged the appliance should not be operated until it has been repaired by a qualified service technician trained by the manufacturer.
b) It is hazardous for anyone other than a competent person to carry out any service or repair operation that involves the removal of a cover which gives protection against exposure to microwave energy.
c) If the supply cord of this appliance is damaged, it must be replaced by a qualified service technician with the special cord available only from the manufacturer.
d) Before use, the user should check that whether utensils are suitable for use in microwave ovens.
e) Liquids or other foods must not be heated in sealed containers since they are liable to explode.
f) Only allow children to use the oven without supervision when adequate instructions have been given so that the child is able to use the oven in a safe way and understands the hazards of improper use.
Installation and General Instructions

General Use
1. In order to maintain high quality, do not operate the oven when empty. The microwave energy will reflect continuously throughout the oven if no food or water is present to absorb energy. This can lead to damage to the microwave oven including arcing within the oven cavity.
2. If smoke is observed, press the STOP/RESET Pad and leave door closed in order to stifle any flames. Disconnect the power cord, and/or shut off power at the fuse or circuit breaker panel.
3. Do not dry clothes, newspapers or other materials in oven. They may catch on fire.
4. Do not use recycled paper products, unless the paper product is labelled as safe for microwave oven use. Recycled paper products may contain impurities which may cause sparks and/or fires when used.
5. Do not use newspapers or paper bags for cooking.
6. Do not hit or strike the Control Panel. Damage to controls may occur.
7. POT HOLDERS may be needed as heat from food is transferred to the cooking container and from the container to the Glass Tray. The Glass Tray can be very hot after removing the cooking container from the oven.
8. Do not store flammable materials next to, on top of, or in the oven. It could be a fire hazard.
9. Do not cook food directly on Glass Tray unless indicated in recipes. (Food should be placed in a suitable cooking container.)
10. **DO NOT** use this oven to heat chemicals or other non-food products. **DO NOT** clean this oven with any product that is labelled as containing corrosive chemicals. The heating of corrosive chemicals in this oven may cause microwave radiation leaks.
11. Do not leave the microwave unattended while reheating or cooking food in disposable containers made of plastic, paper or other combustible materials, as these types of containers can ignite if overheated.

Placement of Oven
1. The oven must be placed on a flat, stable surface. For correct operation, the oven must have sufficient air flow. **Allow 15 cm of space on the top of the oven, 10 cm at the back, and 5 cm on both sides. If one side of the oven is placed flush to wall, the other side or top must not be blocked. Do not remove feet.**
   a. Do not block air vents. If they are blocked during operation, the oven may be overheated and damaged. When using any cloth over the oven, the air intake and exhaust should not be blocked. Also allow sufficient space on back and both sides of the oven.
   b. Do not place oven near a hot or damp surface such as a gas stove, electric range or sink etc.
   c. Do not operate oven when room humidity is too high.
2. This oven was manufactured for household use only.
3. The appliance is freestanding type and shall not be placed in a cabinet.

Circuits
Your microwave oven should be operated on a separate 10 A circuit from other appliances. Failure to do this may cause the power board fuse to blow, and/or food to cook slower. Do not insert higher value fuse in the power board.

Food
1. Do not use your oven for home canning or the heating of any closed jar. Pressure will build up and the jar may explode. In addition, the microwave oven cannot maintain the food at the correct canning temperature. Improperly canned food may spoil and be dangerous to consume.
2. Do not attempt to deep fry in your microwave oven.
3. Do not boil eggs in their shell and whole hard-boiled eggs (unless otherwise stated in Cooking Guide section). Pressure will build up and the eggs will explode.
4. Potatoes, apples, egg yolks, chicken wings, whole squash and sausages are examples of foods with nonporous skins. This type of food must be pierced before cooking, to prevent bursting.
5. When heating liquids, e.g. soup, sauces and beverages, in your microwave oven, overheating the liquid beyond boiling point can occur without evidence of bubbling. This could result in a sudden boil over of hot liquid. To prevent this possibility the following steps should be taken:
   a. Avoid using straight-sided containers with narrow necks.
   b. Do not overheat.
   c. Stir the liquid before placing the container in the oven and halfway through cooking time.
   d. After heating, allow to stand in the oven for a short time, stirring again before carefully removing the container.
6. **DO NOT USE A CONVENTIONAL MEAT THERMOMETER IN THE MICROWAVE OVEN.** To check the degree of cooking of roasts and poultry use a MICRO-wave THERMOMETER. Alternatively, a conventional meat thermometer may be used after the food is removed from the oven. If undercooked, return meat or poultry to the oven and cook for a few more minutes at the recommended power level. It is important to ensure that meat and poultry are thoroughly cooked.
7. **COOKING TIMES given in the Cooking Guide section are APPROXIMATE.** Factors that may affect cooking time are preferred degree of moisture content, starting temperature, altitude, volume, size, shape of food and utensils used. As you become familiar with the oven, you will be able to adjust for these factors.
8. It is better to UNDERCOOK RATHER THAN OVERCOOK foods. If food is undercooked, it can always be returned to the oven for further cooking. If food is overcooked, nothing can be done. Always start with minimum cooking times recommended.
9. Extreme care should be taken when cooking popcorn in a microwave oven. Cook for minimum time as recommended by manufacturer. Use the directions suitable for the wattage of your microwave oven. NEVER leave oven unattended when popping popcorn.
10. When heating food in plastic or paper containers, check the oven frequently due to the possibility of ignition.
11. The contents of feeding bottles and baby food jars are to be stirred or shaken and the temperature is to be checked before consumption, in order to avoid burns.
Microwaves and How They Work

Microwaves are a form of high frequency radio waves similar to those used by a radio, including AM, FM and CB. They are similar to a television where the radio waves are converted to a picture on the screen. However, microwaves are much shorter than radio waves; approximately twelve centimetres wave length. Electricity is converted into microwave energy by the magnetron tube (which is the heart of the microwave oven).

From the magnetron tube, microwave energy is transmitted to the oven cavity through a small plastic covered piece. The microwaves are converted to heat in the food. The microwaves enter from the outside of the food and travel through the food losing half of their power every two to three centimetres. Continued cooking to the centre occurs by conduction.

Although pacemakers used to be affected by microwaves (as well as by other radio waves), they are now shielded and are not bothered by these interferences. This allows people with pacemakers to sit calmly by their radio or television and cook with microwave ovens.

When microwaves come in contact with a substance, any one or combination of three things may occur. They can be:
1. REFLECTED
2. TRANSMITTED
3. ABSORBED

Reflection:
Metal substances REFLECT microwave energy and because there is no absorption, there is no heating. This is why the oven interior is either stainless steel or epoxy-coated steel. This ensures that the microwaves are kept inside the cavity and evenly distributed throughout the food with the help of the turntable.

Transmission:
Such substances as paper, glass and plastic TRANSMIT microwave energy and do not become hot except from food. Because these substances do not reflect or absorb microwave energy, they are ideal materials for microwave cooking containers.

Absorption:
Food contains moisture and will ABSORB microwave energy, which causes the moisture molecules within the food to vibrate at an incredible rate (2,450,000,000 times per second). Friction, created by the vibration, produces heat energy which is conducted throughout the food.

Cookware and Utensils Guide

It is important to use the correct container when cooking in a microwave oven. The following will help you make the right selection.

How to Test a Container for Safe Microwave Oven Use

TO TEST A CONTAINER FOR SAFE MICROWAVE OVEN USE: Fill a 1-cup glass measure with cool water and place it in the microwave oven alongside the empty container to be tested; heat one (1) minute at P10. If the container is microwave oven-safe (transparent to microwave energy), the container should remain comfortably cool, the water in glass measure should be hot. If the container is hot, it has absorbed some microwave energy and should NOT be used. This test cannot be used for plastic containers.

Paper Products and Freezer Wrap
Waxed paper, paper plates, cups and napkins should not be used for heating or cooking food. Freezer wrap should not be used as it is not heat resistant and may melt. Paper towel, greaseproof paper and bake paper may be safely used for short periods of time for covering or lining.

Glass, Ceramic and China
Heat-Resistant glass cookware is invaluable in microwave cooking. Many of these items are readily available in most homes: glass jugs, mixing bowls, loaf dishes, covered casseroles, oblong baking dishes, pie plates and round or square cake dishes. Examples of this type of cookware are Pyrex® and Corningware®.

Dinnerware can be used for microwave heating. Many brands of dinnerware are microwave safe. Check the care information for reference to microwave use for dinnerware and serving pieces. If dinnerware is marked ovenproof, it frequently is safe to use in the microwave oven. However, to be sure, check by conducting microwave dish test previously mentioned.

Several types of glassware and dinnerware are not recommended for use in the microwave oven. Do not use dishes with metallic trim or containers with metal parts. Do not use cups or mugs with glued on handles, as they may fall off with continued heating. Do not use delicate glassware. Although the glassware may be transparent to microwave energy the heat from the food may cause the glassware to crack.
Plastics

Plastic dishes, cups and some freezer containers should be used with care in a microwave oven. Choose plastic containers carefully, as some plastic containers may become soft, melt and may scorch. The majority of plastic dishes, even those designed for use in the microwave oven, are not suitable for cooking foods with high fat or sugar content, or for lengthy cooking times. Most microwave plastic dishes should not be used for longer than 3 to 5 minutes on P10 power. These dishes, although not suitable for extended cooking, may be used successfully for defrosting or for use on lower power levels.

Cooking Bags designed to withstand boiling, freezing, or conventional heating are microwave safe. Prepare bags according to manufacturer’s directions. When cooking by microwave, DO NOT use wire twist-ties to close bag. They can act as an antenna and cause arcing (sparks).

DO NOT COOK IN PLASTIC FOOD STORAGE BAGS.

Plastic Wrap such as GLAD WRAP® can be used to cover dishes in most recipes. Over an extended heating time, some disfiguration of the wrap may occur. When removing plastic wrap “covers”, as well as any glass lid, be careful to remove it away from you to avoid steam burns.

Loosen plastic but let dish stand, covered.

Jars and Bottles

Jars and bottles can be used to warm food to serving temperature, if the lid is removed first. Cooking should not be done in these containers since most are not heat resistant and during extended heating times, heat from food would cause cracking or breaking.

Metal

Metal cookware or utensils, or those with metallic trim, should NOT be used in the microwave. Since microwave energy is reflected by metal, foods in metal containers will not cook evenly. There is also a possibility of “arching.”

Although metal utensils should be avoided in microwave cooking, some metal can be helpful when used correctly.

Aluminum foil can be used safely, if certain guidelines are followed, to prevent overcooking. Small pieces of foil are used to shield areas such as chicken wings, tips of roasts, or other thin parts that cook before the rest of the recipe is finished. Make sure foil is attached securely and doesn’t touch sides of oven, otherwise arcing may occur. Foil lined containers, either cardboard or plastic, should NOT be used in the microwave oven as arcing could occur.

Metal twist-ties, either paper or plastic coated, should NOT be used in the microwave oven. Frozen dinner trays can be used in the microwave, if the container is no deeper than 2 cm and is filled with food. Metal skewers can not be used in microwave ovens as arcing may occur. Wooden skewers are readily available and give the same result.

Shells: Scalloped baking shells are best used during reheating and for short periods of cooking time only.

Thermometers are available for use in microwave ovens. DO NOT USE CONVENTIONAL MERCURY TYPE CANDY OR MEAT THERMOMETERS in food while cooking in the microwave oven.

Straw, Wicker and Wood

Straw and wicker baskets may be used in the microwave oven for short periods of time to warm rolls or bread. Large wooden utensils, such as bowls or cutting boards should NOT be used for prolonged heating as the microwave energy may cause the wood to become dry and brittle.
**Feature Diagram**

**Glass Tray**
1. Do not operate the oven without the Roller Ring and Glass Tray in place.
2. Only use the Glass Tray specifically designed for this oven. Do not substitute another Glass Tray.
3. If Glass Tray is hot, allow to cool before cleaning or placing in water.
4. **Do not** cook directly on Glass Tray. Always place food on a microwave-safe dish, or on a rack set in a microwave-safe dish.
5. If food or utensil on Glass Tray touches oven walls, causing the tray to stop moving, the tray will automatically rotate in opposite direction. This is normal.
6. Glass Tray can rotate in either direction.

**Micro Power:**

The **Micro Power** Pad gives you a selection of different power levels representing decreasing amounts of microwave energy, used for cooking foods at different speeds. E.g., The lower the micro power setting, the more evenly the food cooks, although it will take a little longer. To select the correct power level for cooking different foods, refer to the chart below.

**NOTE:**
After using the oven over 3 minutes, the fan may rotate to cool the electric components and “COOL” appears in the display window. This is perfectly normal, and you can take out the food from the oven while the fan operates.
To Set Clock

You can use the oven without setting the clock.

NN-ST780W  NN-ST750W

1 Press Timer/Clock twice or Clock once
Colon will blink in Display Window.

2 Enter Time of Day
Enter time of day using Time Pads e.g. 12:35
Clock is a 12 hour display. There isn’t a.m. or p.m. setting.

NN-ST780W  NN-ST750W

3 Press Timer/Clock or Clock
Colon stops blinking; time of day is entered and locked into Display Window.

NOTES: 1. Oven will not operate while colon is still blinking
2. To reset time of day, repeat step 1 through 3.
3. The clock will keep the time of day as long as oven is plugged in and electricity is supplied.
4. Maximum time available is 12:59. Clock is 12 hour only. One o’clock will be displayed as 1:00
not 13:00.

NOTES:
1. If oven door is opened during the Standing Time, Delay Start or Kitchen Timer, the time in the Display Window will continue to count down.
2. Delay Start cannot be programmed before any Auto Control function. This is to prevent the standing temperature of the food from rising before defrosting or cooking begins. A change in the starting temperature could cause inaccurate results and/or food may deteriorate.
To Defrost

Turbo Defrost or Weight Defrost

This feature allows you to defrost meat, poultry and seafood automatically by just setting the weight of the food.

1  Set Weight

The shape and size of the food will determine the maximum weight the oven can accommodate. The recommended maximum weight of food depends on the oven cavity size. Weight must be programmed in kilograms and tenths of a kilogram (max 3.0 kg).

Defrosting Tips and Techniques

Preparation for Freezing:
1. Heavy-duty plastic wraps, bags and freezer wrap are suitable.
2. Freeze meats, poultry and fish in packages with only 1 or 2 layers of food. To aid in separating layers, place two pieces of wax paper between them.
3. REMOVE ALL AIR and seal securely.
4. LABEL package with type and cut of meat, date and weight.
5. Defrosting times given in the charts are for thoroughly frozen foods (i.e. at least 24 hours in freezer maintained at -18°C or lower).

Defrosting Technique:
1. Remove from wrapper and set on a defrosting rack in a dish on Glass Tray.
2. On Turbo Defrost, the oven will beep during the defrosting time. At “beep”, turn over all meat, poultry, fish and shellfish. Break apart stewing meat, chicken pieces and minced meat. Separate chops and hamburger patties. Shield thin ends of roasts, poultry legs and wings, fat or bones with foil.
3. Throughout the defrosting time, remove any defrosted portions of mince or cubed meat, etc.
4. After defrosting, large roasts may still be icy in the centre. Let stand, 15 to 30 minutes, in refrigerator to complete defrosting.

To Cook Using **Sensor Cook** (for NN-ST780W) (S)

**Sensor Cook**

1 **Select Category**

Select the appropriate pad for the food you are cooking. The category will appear in the display window.

**e.g.:**

- press once for rice
- press twice for noodles
Category appears in the display window.

**NOTE:**

When cooking using the automatic sensor, all food must be covered securely with plastic wrap. Do not use plastic containers as a secure seal cannot be achieved and inaccurate cooking may occur.

**More/Less Pad:**

Preferences for food doneness varies with each individual. After having used Sensor Cook a few times, you may decide you prefer your food cooked to a different doneness. By using the **More/Less** Pad, the Auto Sensor programmes can be adjusted to cook food for a longer or shorter time. Press **More/Less** Pad before pressing **Start** Pad.

- 1 tap: More cooking with indication “MORE+”
- 2 taps: Less cooking with indication “LESS-”
- 3 taps: Returns to average cooking result.

If you are satisfied with the result of the **SENSOR COOK** programme, you don’t have to use this pad.

2 **Press**

**NOTE:**

The door should not be opened before the countdown time appears in the Display Window.

3 **After the heat and humidity is detected by the SENSOR, the remaining cooking time appears in the Display Window and begins to count down. When cooking time is longer than 60 minutes, the time will appear in hours and minutes.**
Sensor Reheat (for NN-ST780W)

For best results on Sensor Reheat, follow these recommendations:
1. Food being reheated should weigh between 125 g and 1.0 kg. For foods weighing less than 125 g and more than 1.0 kg, use a manual micro power setting.
2. All foods must be previously cooked and at room or refrigerator temperature (for sensor reheat) or frozen at -18°C for at least 24 hours (for frozen reheat).
3. Foods should always be covered loosely, but completely, with plastic wrap. (Do not use any snap closing lids.)
4. All foods should have a covered stand time of at least 3 to 5 minutes.
5. Do not reheat bread or pastry products (raw or uncooked), or beverages.
6. Do not use if oven cavity is warm (from previously cooked foods).

Consult the following Recipe Chapters for Sensor Cooking Instructions for Each Category on your oven.

2. Foods should be reheated from room temperature or refrigerator temperature. Do not reheat frozen foods on this setting.
3. Foods should be covered loosely but completely with plastic wrap or a casserole lid which does not snap seal.
4. Foods weighing less than 200 g and more than 900 g should be reheated by Micro Power and Time only.
5. All foods should have a covered stand time of 3 to 5 minutes at the end of reheating.
6. Do not reheat bread or pastry products; raw, uncooked or frozen foods; or beverages.

Care of Your Oven

NOTE: The oven should be cleaned regularly and any food deposits removed.

BEFORE CLEANING:
Remove plug from outlet. If impossible, leave oven door open to prevent oven from accidentally turning on.

Inside of the oven:
Wipe with a damp cloth. Mild detergent may be used if the oven gets very dirty. The use of harsh detergent or abrasives is not recommended.

Glass Tray:
Remove and wash in warm soapy water or in a dishwasher. If grease accumulates, clean with a non-abrasive nylon mesh scouring pad and a non-abrasive cleanser.

Outside oven surfaces and back vents.
To prevent overheating caused by blocked vents, clean periodically with damp cloth. To prevent damage to the operating parts inside the oven, water should not be allowed to seep into ventilation openings.

Control Panel:
If it becomes wet, clean with a soft, dry cloth. Do not use harsh detergents or abrasives on the Control Panel.

Roller Ring and oven cavity floor:
Wipe the bottom surface of the oven with mild detergent water or window cleaner and dry. Roller Ring may be washed in mild soapy water or dishwasher. These areas should be kept clean to avoid excessive noise and scratching of painted surface.

Panasonic Warranty

1. The product is warranted for 12 months from the date of purchase. Subject to the conditions of this warranty Panasonic or its Authorised Service Centre will perform necessary service on the product without charge for parts or labour if, in the opinion of Panasonic, the product is found to be faulty within the warranty period.

2. This warranty only applies to Panasonic products purchased in Australia and sold by Panasonic Australia or its Authorised Distributors or Dealers and only where the products are used and serviced within Australia or its territories. Warranty cover only applies to service carried out by a Panasonic Authorised Service Centre and only if valid proof of purchase is presented when service is requested.

3. This warranty only applies if the product has been installed and used in accordance with the manufacturer’s recommendations (as noted in the operating instructions) under normal use and reasonable care (in the opinion of Panasonic). The warranty covers normal domestic use only and does not cover damage, malfunction or failure resulting from use of incorrect voltages, incorrect installation, accident, misuse, neglect, build-up of dirt or dust, abuse, maladjustment of customer controls, mains supply problems, thunderstorm activity, infestation by insects or vermin, tampering or repair by unauthorised persons (including unauthorised alterations), exposure to abnormally corrosive conditions or any foreign object or matter having entered the product.

4. This warranty does not cover the following items unless the fault or defect existed at the time of purchase:
   (a) Video or Audio Tapes
   (b) Video or Audio Heads and Styli resulting from wear and tear in normal use
   (c) Shaver Heads or Cutters
   (d) Cabinet Parts
   (e) User replaceable Batteries
   (f) Thermal Paper, Toner/Ink Cartridges, Drums,
   (g) Microwave Oven cook plates.
   (h) Kneader mounting shaft unit
   (i) Bread bakery
   (j) Whiteboard (except portable type)

5. If warranty service is required you should:
   - Telephone Panasonic’s Customer Care Centre on 132600 or visit our website and use the Service Centre Locator for the name/address of the nearest Authorised Service Centre.
   - Send or bring the product to a Panasonic Authorised Service Centre together with your proof of purchase receipt as a proof of purchase date. Please note that freight and insurance to and / or from your nearest Authorised Service Centre must be arranged by you.
   - Note that home or pick-up/delivery service is available for the following products in the major metropolitan areas of Australia or the normal operating areas of the nearest Authorised Service Centres:
     (a) Picture tube (CRT) based Television Receivers (screen sizes greater than 66cm); Rear Projection TV’s; Plasma/LCD
     (b) Convection/Combination Microwave Ovens
     (c) Whiteboard (except portable type)

6. The warranties hereby conferred do not extend to, and exclude, any costs associated with the installation, deinstallation or re-installation of a product, including costs related to the mounting, de-mounting or remounting of any screen, and any other ancillary activities, delivery, handling, freight, transportation or insurance of the product or any part thereof or replacement of and do not extend to, and exclude, any other loss or damage resulting from reason of, during, associated with, or related to such installation, de-installation, re-installation or transit.

Panasonic Authorised Service Centres are located in major metropolitan areas and most regional centres of Australia, however, coverage will vary dependant on product. For advice on exact Authorised Service Centre locations for your product, please telephone our Customer Care Centre on 132600 or visit our website and use the Service Centre Locator.

Unless otherwise specified to the consumer the benefits conferred by this express warranty are additional to all other conditions, warranties, guarantees, rights and remedies expressed or implied by the Trade Practices Act 1974 and similar consumer protection provisions contained in legislation of the States and Territories and all other obligations and liabilities on the part of the manufacturer or supplier and nothing contained herein shall restrict or modify such rights, remedies, obligations or liabilities.

</table>
Microwaves penetrate the surface of the food to a depth of about two to three centimetres and then the heat is gradually conducted in a random pattern. Some parts of food matter cook faster than others. Special microwave techniques are used to promote fast and even cooking. Some of these techniques are similar to those used in conventional cooking, but because microwaves produce heat very quickly these following techniques are extremely important. It’s a must for you to be familiar with the following tips.

### Food Characteristics

#### Size and Quantity
Small portions cook faster than large portions. As you increase the quantity of food you put into the microwave oven, you must also increase your cooking time. The microwave oven has the same power regardless of quantity; thus the power is divided between more items and so it takes longer to cook.

As a general guide, if you double the quantity of food suggested in the recipe, add half the time suggested again.

#### Liquid Content
Low moisture foods take a shorter time to cook than foods with a lot of moisture.

#### Shape
Uniform sizes cook more evenly. To compensate for irregular shapes, place thin pieces towards the centre of the dish and thicker pieces towards the outer edge of the dish.

#### Bone and Fat
Bones conduct heat and cause the meat next to them to be heated more quickly. Large amounts of fat absorb microwave energy and the meat next to these areas may overcook.

#### Starting Temperature
Food which has been sitting at room temperature takes less time to cook than refrigerated or frozen food.

#### Density and Composition
Porous, airy foods (cakes and breads) take less time to cook than heavy compacted foods (meat and vegetables). Recipes high in fat and sugar content cook more quickly.

### Techniques for Preparation

#### Timing
A range of cooking times is given in each recipe for two reasons. First, to allow for the uncontrollable differences in food shapes, starting temperatures and personal preferences. Secondly, these allow for the differences in electrical voltage input which changes during peak load periods. Always remember that it is easier to add time to undercooked food. Once the food is overcooked, nothing can be done. For each recipe, an approximate cooking time is given.

#### Stirring
Stirring is often necessary during microwave cooking. We have noted when stirring is helpful in the recipes. Always bring the outside edges towards the centre and the centre portions to the outside.

#### Rearranging or Turning
Some foods should be turned in the container during cooking. For example, because of the different thicknesses in the breast and back sections of poultry, it is a good idea to turn poultry over once to ensure more even cooking. Rearranging or turning over uneven shaped food in the dish should be done as suggested to ensure a satisfactory result. Rearrange small items such as chicken pieces, prawns, hamburger patties, steak or chops. Rearrange pieces from the centre to the edge of the dish.

#### Cooking in Layers
This microwave oven is not designed to cook more than 1 layer of food. Cooking in 2 layers may not always be successful, it takes longer and may be uneven. You can successfully reheat two dinner plates of food at one time but remember to increase the reheating time and use a microwave warming rack.

#### Piercing of Foods
Pierce the skin or membrane of foods when cooked whole in the microwave oven. This allows steam to escape. If the skin has not been pierced, food may burst.

#### Cured Meats
Cured meats may overcook in some areas due to the high concentration of salts used in the curing process. So take care when cooking different brands of bacon as cooking times may vary slightly.
Covering
Covering food minimizes the microwave cooking time. Because microwave cooking is done with time and not direct heat, the rate of evaporation cannot be easily controlled. However, this can be corrected by using different materials to cover dishes. Plastic wrap is the best substitute for a lid as it creates a tighter seal and so it retains more heat and steam. Wax paper and paper towels hold the heat in but not the steam. These materials also prevent splattering. Use a paper towel, wax paper or no cover when steam is not needed for tenderizing.

Browning
Meats and poultry, when cooked longer than 10 to 15 minutes, will brown from their own fat. Foods cooked for shorter periods of time can be aided with the help of a browning sauce, worcestershire sauce or soy sauce. Simply brush one of these sauces over meat or poultry before cooking. Baked goods do not need long cooking times and therefore, do not brown. When cakes or cupcakes are iced, no one will notice the visual difference. For cakes or cupcakes, brown sugar can be used in the recipe in place of caster sugar or the surface can be sprinkled with dark spices before baking.

Standing Time
The moisture molecules continue to vibrate in the food when the microwave oven has turned itself off. After all, the molecules were vibrating at 2,450,000,000 times per second during cooking. So cooking continues even after the food is no longer being exposed to the microwaves whether in or outside your microwave oven. Standing time refers to the time it takes (after the microwave time is completed) to allow the interior of the food to finish cooking. The amount of standing time varies with the size and density of the food. In meat cookery, the internal temperature will rise between 5°C and 10°C if allowed to stand covered for ten to fifteen minutes. Casseroles and vegetables need shorter standing time, but this is necessary to allow foods to complete cooking in the centre without overcooking on the edges. The power level used in microwave cooking also determines the standing time. For example, when using a lower power level the standing time is shorter because of a lower concentration of heat in the food. Foods should always be kept covered while standing in order to retain the heat. If a longer standing time is required (while you cook another food to serve with the first, for instance), cover with aluminum foil.

Converting Your Favourite Conventional Recipes for Microwave Cooking

When adapting conventional recipes for microwave cooking time are reduced considerably. For example, A chicken which takes 1 hour to cook in a moderate oven will take 15 to 20 minutes on P7 Power in your microwave oven.

Use similar microwave recipes to help you adapt conventional recipes. Remember, it is always best to undercook a recipe and then add an extra minute or two to finish it off.

Here are some other tips that may help:
- Reduce liquids in a conventional recipe by one half to two thirds, e.g. 1 cup (250 ml) should be reduced to ½ cup (125 ml).
- Add more thickening such as flour or cornflour to sauces and gravies if you do not reduce the liquid.
- Reduce seasonings slightly in a recipe where ingredients do not have time to simmer by microwave.
- Do not salt meats, poultry or vegetables before cooking; otherwise, they will toughen and dry out.
- If one ingredient takes longer to cook than the others, pre-cook it in the microwave oven first. Onion, celery and potato are examples.
- When cooking meat or vegetables, omit any oil or fat that would have been used in a conventional recipe for browning.
- Reduce leavening agents for cakes by one quarter and increase liquids by one quarter.
- Biscuits require a stiff dough. Increase flour by about 20 percent. Substitute brown sugar for white sugar and use biscuit recipes that have dark spices or require icing. Because of the short cooking time, biscuits don’t have time to brown. Chill dough for half an hour before baking. This produces a crisper biscuit. Bake biscuits on a glass tray lined with greaseproof paper.
- Since microwaves penetrate foods about two centimetres from the top, bottom and sides, mixtures in round shapes and rings cook more evenly. Corners receive more energy and may overcook.
- Items with a lot of water, such as rice and pasta, cook in about the same time as they would on a conventional stove. (Refer to Rice and Pasta chapter.)

Select recipes that convert easily to microwave cooking such as casseroles, stews, baked chicken, fish and vegetable dishes. The results from foods such as grilled meats, cooked souffles or two-crust pies could be less than satisfactory. Never attempt to deep fry in your microwave oven.
Menu Planning for Microwave Cooking

How to Keep Everything Hot at The Same Time
Plan your meals so that the food will not all need last minute cooking or attention at the same time. The special features of microwave cookery make it easy to serve meals with everything piping hot. Cooking of some foods may be interrupted while you start others, without harming the nutritional value or flavour of either. A recipe which requires standing time can be microwaved first and another food cooked while it stands. Dishes prepared in advance can be reheated briefly before serving. It does take some experience and time to cook with confidence. Microwaves are fast so you will have to do some experimenting. You might find you will use your conventional range in conjunction with your microwave oven. For example, while cooking the roast in the microwave oven, you can be cooking the vegetables and gravy on the range top. This can also be done the other way around. Prepare your meals as follows.

1. Firstly, cook the most dense item (roast or casserole). Drain and retain meat juice from joints then cover with foil.
2. Cook the potatoes, rice or pasta.
3. Cover with foil for standing.
4. Cook greens and other vegetables.
5. Cover with foil for standing.
6. Cook the gravy with the retained meat juices, stock and thickening.
7. Carve the roast and serve the vegetables and gravy.

While you are learning to plan meals, you may get a bit behind time. Don’t worry. Dinner servings may be suitably reheated on P7, 1 to 2 minutes per serving.

If you prefer not to use foil, cover food with saucepan lids. A metal lid will retain the heat for at least 15 minutes. Meanwhile, how can you cook all the vegetables at the same time? Simply place potatoes and pumpkin in one dish and less dense vegetables such as broccoli, cabbage, cauliflower, beans and peas in another. Sprinkle greens with water. Cover with a lid or plastic wrap. Cook on P10 for cooking times refer to vegetables cooking chart on page 47. Remember, if you increase the quantity of vegetables, increase the cooking time. Fresh and frozen vegetables can be mixed on a vegetable platter, but remember the latter are not as dense as fresh vegetables, as they have been blanched before freezing. If vegetables are cut to a similar size, they can be cooked in separate ramekins or small dishes at the same time.

Increasing & Decreasing Recipes

Increasing
• To increase a recipe from 4 to 6 servings, increase each ingredient listed by half.
• To increase a recipe from 4 to 8 servings, double each ingredient listed.
• For larger quantities of a recipe, a large dish should be used. Make sure that the dish is deep enough to prevent the recipe from boiling over during cooking.
• Make sure to cover, stir or rearrange food as directed in the recipe and always check the food during cooking.
• Increase standing times by 5 minutes per 500g.
• Use the same Power Level recommended in the original recipe.
• Increase the cooking times by: ⅓ of original cooking time for 6 servings; and an extra ½ of original cooking time for 8 servings.

Decreasing
• To decrease a recipe from 4 to 2 servings, decrease each ingredient listed by half.
• For small quantities, a small dish should be used. Make sure that the dish is large enough to prevent the recipe from boiling over during cooking.
• Use the same Power Level recommended in the original recipe.
• Decrease the cooking times by ⅓ to ⅔ of the original cooking time.

Cooking for One
• To decrease a recipe from 4 to 1 serving, quarter each ingredient listed.
• A smaller dish should be used, making sure that the dish is still large enough to prevent the recipe from boiling over.
• Use the same Power Level recommended in the original recipe.
• Quarter the original cooking times, then add extra time, if needed.
• Make sure to cover, stir or rearrange food as directed in original recipe and always check the food during cooking.

Converting Recipes from Other Sources
When the recipe is written with a wattage different than your oven, adjust the cooking time by approximately 10% per 100 watts, e.g. 6 minutes would be adjusted by 36 seconds. Alternately, adjust the power level by one level. If your wattage is higher than the recipe: (1) Adjust time downward or (2) Adjust power level downward. If your wattage is lower than the recipe: (1) adjust time upward or (2) adjust power level upward (when possible).
One of the most common uses for a microwave oven is to reheat food. Your Panasonic microwave allows you to either reheat by placing food into the oven and you choose the micro power level and length of heating time or you may reheat automatically by using the SENSOR REHEAT buttons on your microwave. Following are some directions for reheating pre-cooked foods from either frozen refrigerator temperature or room temperature.

**General rules for reheating foods by Micro Power**

- Many convenience foods contain heating instructions on the packaging. It is best to follow these instructions, being sure to check the wattage of the oven they used and adjust the cooking time if necessary (decrease cooking time by 10% for every 100 watts more powerful your oven is)
- If package directions are not available, follow the recommendations in the charts on the following pages.
- All foods must be pre-cooked; raw foods will not cook through during reheating times and if consumed may cause illness.
- Do not reheat in foil containers, cans or plastic containers as incorrect heating times will result. Place foods into microwave safe bowls or dinner plate before heating.
- Most foods can be heated on P10 but consider if the food is delicate in structure like baked custard or you have a large quantity, a lower power level for slightly longer may be gentler.
- Cover foods with plastic wrap if you require a steamed effect or leave uncovered for a dryer surface e.g. Crumbed foods.

**Note:** when cooking by Sensor Cook all food must be covered.

- Stir or re-arrange foods during heating as this will help food heat evenly. Stir after heating and let stand for 2 to 3 minutes. Check temperatures before adding extra heating time and ensure food is hot. If food is not heated enough, consumption may cause illness.

---

**Reheating by Sensor Cook (S)**

(125 g - 1.0 kg)

- Reheating by Sensor is suitable for pre-cooked foods. There is a setting for frozen, and refrigerator temperature or room temperature foods. It is suitable for casseroles, plated meals, soup, stews, pasta dishes (except lasagne) and canned foods.
- Do not reheat bread or pastry products, raw uncooked food or beverages on Sensor Reheat.
- Foods greater than 1 kg or smaller than 125 g should be cooked by micro power and time.
- Follow general directions for heating as above.
- Cover foods securely with plastic wrap or a fitted lid, which does not snap seal.
- Halfway through the cooking time, the oven will 'beep' and prompt you to stir/rearrange the food. There is no need to recover if not required.
- After heating, stir the food, check it is hot and allow standing for 2 to 3 minutes.

**To Operate:** Press then Press **Start**.

**NN-ST780W**

---

**Reheating by Auto Cook (A)**

(250 g - 850 g)

- Foods weighing less than 200 g and more than 900 g should be heated by micro power and time.
- Auto Cook has 2 settings one for heating frozen foods and one for heating foods from refrigerator or room temperature.
- Suitable foods include casseroles, plated dinners, soups, stews, pasta dishes, (except lasagne) and canned foods.
- Do not reheat bread or pastry items, raw or uncooked foods or beverages.
- Cover foods loosely with plastic wrap or a lid, which does not snap seal.
- During the cooking time, the oven will 'beep' and prompt you to rearrange or stir. At the end of cooking time, stir the food, check it is hot and allow standing 2 to 3 minutes.

**To Operate:** Press **Auto Reheat** or **Auto Cook**

1. Frozen Reheat,

Select the **serving / weight** pad, then Press **Start**.

IMPORTANT POINTS TO CONSIDER WHEN REHEATING COLD FOODS

STARTING TEMPERATURE —
Foods taken from the refrigerator will take longer to reheat than foods from room temperature.

Quantity —
One serving heats faster than several servings. When heating large quantities, stir food to ensure even heating. It is quicker to heat individual plates of food than large quantities in a casserole dish.

Plated Dinners —
Arrange foods with the most dense items towards the outside of the plate. Cover meats with sauces/gravies if desired, spread out mashed potatoes or rice so it heats more evenly. When assembling plates of leftover foods, use foods which have a similar starting temperature.

Covering Foods —
Most foods need to be covered with one sheet of absorbent paper towel to hold in the heat and prevent spattering without steaming. When more moisture is desired, cover with plastic wrap.

Heating —
Reheating is usually done on P10, however, if food has a more delicate texture, like a baked custard, a lower power setting should be used. P7 for a little longer will be gentler on the food. An average plate of food would generally take 1 to 3 minutes to heat depending on the density of the food. Place it in for the minimum time and add extra heating time if required.

Ensure food is hot by feeling the bottom of the plate in the centre. If the plate is cool, food may be warm but will lose heat quickly as the plate will absorb the heat and taste cold when served.

If food is not heated enough, consumption may cause illness.

Elevation —
Elevate pastries and breads on a small plastic rack with paper towel under the food to prevent it from becoming soggy.

Caution:
Pastry items which have a filling that is high in fat, sugar or moisture will become hotter in the centre and the pastry may only feel warm. Ensure you allow it to stand for several minutes before eating.

IMPORTANT POINTS TO CONSIDER WHEN REHEATING FOODS FROM THE FREEZER

VOLUME —
The greater the volume and the more dense the item, the longer it takes to reheat. E.g. frozen cake will take less time than frozen casseroles.

LARGE VOLUME —
Large, dense, frozen precooked foods are best thawed on defrost until icy in the centre then heated on P7. This prevents overcooking of the edges. Stirring is often needed to distribute heat evenly.

Commercial frozen foods —
These foods should be removed from their foil containers if possible and placed into suitable microwave safe containers. If a foil container is used in the microwave oven it shouldn't be more than 4 cm high and must not touch the interior of the microwave oven. Remove the cover from the tray and replace with paper towel or plastic wrap to prevent splattering.

Foods to be served at room temperature —
For best results, defrost for a short time and allow to stand to complete thawing, e.g. frozen cake.

Vacuum sealed pouches —
Pierce pouches, bags before heating to allow steam to escape. This prevents bursting.

Containers —
Use dishes about the same volume of the food or slightly larger to allow for stirring. Remove or release snap seal lids otherwise they will pop during heating and may disfigure.

Pies and pastries —
Pies and pastries that contain raw pastry and filling cannot be cooked in the microwave oven. Pre-cooked products can be thawed and heated. Place them on a sheet of paper towel and elevate on plastic rack for best results. For added crispness place under the grill or in a hot oven for few minutes. Pastry items can become tough and rubbery if overheated, remember to allow 5 minutes standing then test before adding extra heating time.
PUMPKIN SOUP
Serves: 4

Ingredients:
1 kg pumpkin, chopped and peeled
1 onion, diced
2 cups chicken stock
1 teaspoon curry powder

Method:
Place pumpkin and onion in 2-litre casserole dish.
Cover and cook on P10 for 12 minutes. Add chicken
stock, curry powder and pepper. Cook on P10 for 10
minutes. Cool slightly. Purée pumpkin and liquid in a
blender or food processor. Pour into individual
serving dishes and garnish with chives.

SHORT AND LONG SOUP
Serves: 4

Ingredients:
200 g fresh singapore noodles
12 (200 g) frozen mini dim sims
4 green onions, sliced
1 litre chicken stock
1 teaspoon crushed garlic
½ teaspoon chopped ginger
2 tablespoons soy sauce

2 tablespoons dried onion (optional)

Method:
Place all ingredients except bok choy and bean
sprouts in a 4 litre casserole dish and cook on P10
for 10 minutes. Add bok choy and cook on P10 for 2
minutes. Serve in individual bowls topped with bean
sprouts and onion.

Hints:
To cook 1 double chicken breast. Place onto a
dinner plate. Cover and cook on P7 for 8 to 10
minutes.

Hints:
To reheat a single portion of soup. Place in a
microwave safe dish and cook on P7 for 2 to 3
minutes. Stir and serve.

TOMATO BACON SOUP
Serves: 4 to 6

Ingredients:
4 bacon rashers, chopped
1 onion, chopped
1 (840 g) can tomatoes
2 tablespoons tomato paste
2 cups chicken stock
1 teaspoon oregano
pepper

Method:
Place bacon and onion in 4-litre casserole dish. Cook
on P10 for 3 minutes. Add remaining ingredients and
stir. Cook on P10 for 16 to 18 minutes, stirring once
during cooking. Purée in food processor or blender
and serve in individual soup bowls.

POTATO AND LEEK SOUP
Serves: 4 to 6

Ingredients:
800 g potatoes, peeled and diced
1½ cups thinly sliced leeks
2 teaspoons fresh thyme
pepper
2 cups chicken stock
150 ml cream

Method:
Place potatoes, leeks, thyme and pepper in 4-litre
casserole dish. Cover and cook on P10 for 8 to 10

P10 for 14 to 16 minutes. Purée soup mixture. Add
cream, stir and serve hot or cold in individual bowls.
**PEA AND HAM SOUP**

*Serves: 6*

**Ingredients:**
- 2 1/2 cups green split peas
- 850 g smoked ham hock
- 1 medium onion, chopped
- 1 tablespoon thyme leaves
- 1 bay leaf
- 6 cups chicken stock
- 1/2 cup frozen peas

**Method:**
Wash split peas and place in a 2-litre bowl with 1-litre of water. Cover and allow soaking for 8 hours or overnight. Remove rind from ham hock and discard. Cut meat away from the bone and roughly chop. Reserve bone. Drain peas and place into a 5-litre microwave safe dish. Add ham bone, chopped ham, onion, thyme, bay leaf and chicken stock. Cook uncovered on P10 for 15 minutes. Reduce power to P6 and cook for 15 minutes. Skim top of soup and cook on P6 for a further 30 minutes. Remove ham bone and bay leaf and stir in frozen peas. Cook on P6 for 10 minutes. Blend half the soup and return to the bowl, stirring through the remaining soup. Serve hot with crusty bread.

**Tip:**
Substitute 500 g bacon bones and 250 g of diced bacon rashers for the ham hock.
Do not add salt when cooking lentils or pulses, as they will toughen. Add salt after cooking if desired.

**CHICKEN AND PRAWN LAKSA**

*Serves: 4*

**Ingredients:**

**Soup:**
- 2 tablespoons laksa paste
- 400 ml coconut milk
- 1 litre chicken stock
- 1 tablespoon soy sauce

**Laksa:**
- 250 g rice noodles
- 8 cups boiling water
- 4 leaves from 1 bunch of coriander
- 1/2 cup small red chillies, seeds removed and finely chopped
- 4 bean sprouts
- 1 tablespoon lime wedges
- 400 g cooked chicken tenderloins, sliced
- 12 green king prawns, peeled

**Method:**

**Soup:**
Place the laksa paste, coconut milk, stock, soy sauce and pepper into a 3-litre dish and cook covered on P10 for 8 to 10 minutes.

**Laksa:**
Place the noodles and water in a 4-litre dish. Cover and cook on P10 for 2 to 3 minutes, stirring halfway through. Drain well and divide between 4 deep bowls. Place the coriander, chillies, bean sprouts and lime on top. Place the peanut oil and prawns in a 1-litre dish and cook on P7 for 3 to 5 minutes, stirring halfway through. Add the chicken and prawns to each individual bowl and set aside.

**To serve:**
Heat soup on P10 for 2 minutes. Pour the hot soup over the ingredients in the 4 bowls and serve.

**SWEET POTATO AND CORIANDER SOUP**

*Serves: 4 to 6*

**Ingredients:**
- 1 onion, diced
- 1 teaspoon crushed garlic
- 1 teaspoon crushed chilli
- 1 teaspoon chopped ginger
- 1 kg sweet potato, peeled and chopped
- 1/2 teaspoon cumin
- 500 ml chicken stock
- 200 ml coconut milk
- 1 tablespoon chopped coriander

**Method:**
Place onion, garlic chilli, ginger, and sweet potato into a 4-litre bowl. Cook covered on P10 for 10-12 minutes, stirring halfway through cooking. Stir in cumin, chicken stock and coconut milk. Cook on P10 for 10-12 minutes, stirring halfway through cooking. Add coriander and stir. Allow to cool slightly then puree in a blender or food processor. Serve topped with extra coriander and chilli.
ROASTED NUTS
Serves: 2 to 4

Ingredients:
1 cup (150 g) raw peanuts (with or without skins, and unsalted)
1 teaspoon vegetable oil
salt to taste

Method:
Place peanuts in a single layer on a pie plate. Drizzle nuts with oil and sprinkle with salt. Cook on P10 for 4 to 6 minutes, stirring every 2 minutes during cooking, until golden brown. Stir well. Serve hot or cold in a small bowl.

SPEEDY NACHOS
Serves: 2 to 4

Ingredients:
1 (310 g) can red kidney beans, drained
1 cup chilli salsa
200 g packet corn chips
1 cup grated cheese

Method:
Mix kidney beans and salsa in a 1-litre dish. Place corn chips in the base of a flat dish. Pour sauce over beans and top with grated cheese. Cook on P10 for 4 to 5 minutes.

Note: Chilli salsa can be substituted with your favourite tomato relish.

NUTS AND BOLTS
Serves: 6 to 8

Ingredients:
80 g butter
2 teaspoons curry powder
2 tablespoons worcestershire sauce
½ teaspoon salt
⅛ teaspoon garlic powder
100 g packet mixed rice crackers
100 g fried noodles
200 g salted peanuts
125 g packet pretzel sticks
½ cup Nutri-Grain

Method:
Place butter, curry, worcestershire sauce, salt and garlic powder in a 3-litre casserole dish. Cook on P10 for 1 to 2 minutes. Add remaining ingredients, mix well and cook on P10 for 4 to 5 minutes. Stir twice during cooking. Allow to cool. Place in a bowl and serve with drinks. Store in an airtight container once cool.

HINT:
TO MAKE CROUTONS:
Remove crusts from 3 slices of bread and cut into cubes. Place in a pyrex bowl with 1 tablespoon of butter and cook on P10 for 2 to 3 minutes.

HINT:
TO REHEAT A CROISSANT:
Wrap in paper towel and place on a dinner plate, cook on P10 for 15 to 30 seconds.

NACHOS SUPREME
Serves: 4 to 6

Ingredients:
500 g topside mince
35 g packet taco seasoning mix
½ cup tomato paste
1 teaspoon Mexican chilli powder
1 (310 g) can red kidney beans, mashed in liquid
180 g packet corn chips
1 avocado
½ cup sour cream
½ cup grated cheese
½ teaspoon paprika

Method:
Place meat in a 2-litre dish. Cover and cook on P7 for 6 minutes stirring halfway through cooking. Mix with fork, breaking up any large pieces of meat. Add taco mix, tomato paste, chilli powder and kidney beans. Cook on P7 for further 10 minutes, stirring halfway through cooking. Place corn chips in a 3-litre microwave suitable serving dish. Pile meat sauce in the centre. In a small bowl, mash avocado and mix in sour cream. Spoon this mixture over meat sauce and top with grated cheese. Sprinkle with paprika. Heat on P7 for 3 to 4 minutes.

STUFFED POTATOES
Serve: 4

Ingredients:
4 (700 g) potatoes, unpeeled

Method:
Pierce the skin of each potato several times with a fork. Place potatoes evenly around a microwave safe dinner plate. Cook on P10 for 8 to 10 minutes. Set aside to cool slightly. Cut tops off potatoes and reserve. Scoop out potato flesh leaving a 1 cm thick shell. Mash potato flesh and mix with your choice of filling. Pile back into potato shell. Replace top and heat potatoes on P10 for 2 minutes.

Filling:
Corn & bacon
1 rashers bacon, finely chopped
125 g creamed corn
¼ cup grated cheddar cheese
1 green onion, finely sliced

Method:
Place bacon onto a microwave safe dinner plate. Cover with paper towel and cook on P10 for 1 minute. Mix with remaining ingredients.

Tomato pesto
½ cup spreadable cream cheese
½ cup chopped sun-dried tomatoes
2 tablespoons pine nuts, roasted
2 tablespoons grated Parmesan cheese
2 tablespoons chopped basil

Method:
Mix together all ingredients.
Cooking Fish and Shellfish by Micro Power

Clean fish before starting the recipe. Arrange fish in a single layer, overlap thin fillet ends to prevent overcooking. Prawns and scallops should be placed in a single layer.

Cover dish with plastic wrap. Cook on the power level and the minimum time recommended in the chart below. Halfway through cooking rearrange or stir prawns, fish fillets or scallops.

Place oysters in shell evenly around dinner plate and sprinkle with bacon mixture. Pour some sauce mixture over each oyster. Cook on P10 for 1 to 1½ minutes. Serve with drinks or as an entree.
Cooking Whole Poultry by Micro power

Season as desired, but salt after cooking. Browning sauce mixed with equal parts of butter will enhance the appearance.

Poultry must be unstuffed. Tie legs together with cotton string. Place on a microwave rack set in a rectangular dish. Place poultry breast-side down: turn over halfway through cooking. Cover with wax paper to prevent splattering.

If the poultry is not cooked enough, return it to the oven and cook a few more minutes at the recommended power level.

DO NOT USE A CONVENTIONAL MEAT THERMOMETER IN THE MICROWAVE OVEN.

Let stand, covered with foil, 10 to 15 minutes after cooking. Standing time allows the temperature to equalize throughout the food and finishes the cooking process.

If a large amount of juice accumulates in the bottom of the baking dish, occasionally drain it. If desired, reserve juices for making gravy.

Less-tender birds should be cooked in liquid such as soup or broth. Use \( \frac{1}{4} \) cup per 500 g of poultry.

Use an oven cooking bag or a covered casserole. Select a covered casserole deep enough so that bird does not touch the lid.

If an oven cooking bag is used, prepare according to package directions. Do not use wire twist-ties to close bag. Use only nylon tie, a piece of cotton string, or a strip cut from the open end of the bag. Make six 2 cm slits on top of bag.

Multiply the weight of the poultry by the minimum recommended minutes per 500 g. See chart below. Programme Micro Power and Time.

After cooking, check the internal temperature of the bird with a microwave or conventional meat thermometer inserted into the muscle. Check temperature in both muscles. The thermometer should not touch bone. If it does, the reading could be inaccurate. A thermometer cannot be accurately inserted into a small bird. To check desired cooking of a small bird, juices should be clear and the drumsticks should readily move up and down after standing time.

During cooking, it may be necessary to shield legs, wings and the breast bone with foil to prevent overcooking. Wooden toothpicks can be used to hold foil in place.

Cooking Poultry Pieces by Micro power

Cover with wax paper or paper towel. Use the chart below to determine recommended minimum cooking times.

Arrange pieces skin-side down and evenly spread in a shallow dish.

Turn or rearrange halfway through cooking. Shield wing tips, drumstick ends etc., if required.

Cooking Whole Chicken by Sensor Cook (S)

- Minimum Weight 1.0 kg / Maximum Weight 2.0 kg
- Whole chickens should be cooked directly from the refrigerator and totally thawed.
- Tie legs together with string.
- Place onto a microwave rack set inside a dish.
- Place whole poultry breast side down.
- Do not stuff poultry with raw meat, bread crumbs or cooked rice, seasonings may be used.
- Marinate or baste chicken before cooking for added flavour and colour.
- Cover dish completely and securely with plastic wrap.
- Anytime during the cooking time, the oven will ‘beep’ and instruct you to turn over. At this time, shield the wings and drumstick ends, if needed. Remove plastic.
- Let stand 10 to 15 minutes at the completion of cooking. This makes carving the meat easier and ensures that the heat is even throughout.

To Operate: Select Whole Chicken, then press Start.

Cooking Chicken Pieces by Sensor Cook (S) / Auto Cook [A]

- Suitable for cooking chicken pieces, such as wings, thighs, drumsticks and breasts.
- Chicken pieces should be completely thawed before cooking.
- Marinate chicken pieces before cooking for added flavour and colour.
- Arrange chicken pieces skin side down with thicker, meatier portions towards the edge of dish.

Sensor Cook (S) (400 g - 1.0 kg)
- Cover dish securely with plastic wrap.
- Anytime during the cooking time, the oven will ‘beep’ and instruct you to turn over/re-arrange. Remove the plastic wrap completely from dish. There is no need to re-cover.
- Let stand 5 to 10 minutes at the completion of cooking.

To Operate by Sensor Cook: Select Chicken Pieces, then press Start.

Auto Cook [A] (400 g - 1.0 kg)
- Leave chicken pieces uncovered if desired.
- Halfway through the cooking time, the oven will ‘beep’ and prompt you to turn over and re-arrange the chicken pieces.
- Let stand 5 to 10 minutes at the completion of cooking.

To Operate by Auto Cook: Press Auto Cook to Chicken Pieces. Select the serving / weight, then press Start.

Cooking Eggs by Micro Power

Boiled Eggs: Do not boil eggs in your microwave. Raw eggs boiled in their shells can explode and cause serious injury.

Poached Eggs: The membrane on egg yolks must be pierced before cooking, otherwise steam will build up and cause yolk to pop.

Scrambled Eggs: Slightly undercook scrambled eggs as they will finish cooking during standing.

SCRAMBLED EGGS
Serves: 2

Ingredients:
4 x 61 g eggs
4 tablespoons milk
pinch of salt

Method:
In 1-litre casserole dish, beat eggs lightly with whisk. Add milk and salt. Whisk until well combined. Cover dish with plastic wrap and cook on P6 for 2 to 2½ minutes. Stir eggs and cook for further 2½ to 3 minutes. Stand, covered, for 1 minute before serving.

POACHED EGGS
Serves: 2

Ingredients:
2 x 61 g eggs
½ cup hot tap water
dash of vinegar
pinch of salt

Method:
Place one quarter of cup of water, dash of vinegar and pinch of salt into 2 ramekin dishes or small glass bowls. Heat water on P10 for 30 - 60 seconds. Break egg into the water and with toothpick pierce the egg yolk twice and egg white several times. Cover dishes with plastic wrap and cook on P6 for 1 to 1½ minutes. Stand, covered, for 1 minute before serving.

Note: The size of the eggs will alter cooking time.
GREEN PEPPERCORN CHICKEN
Serves: 4
Ingredients:
500 g sliced chicken breast fillets
2 tablespoons green peppercorns
1 tablespoon seeded mustard
1 teaspoon chicken stock powder
2 tablespoons lemon juice
1/2 cup cream

Method:
Place chicken in a 3-litre casserole dish. Cook on P7 for 8 to 10 minutes stirring halfway through cooking. Mix together peppercorns, mustard, stock powder, lemon juice and cream. Pour over chicken, stir. Cook on P10 for 2 to 3 minutes.

HONEY MUSTARD DRUMSTICKS (S) [A]
Serves: 3 to 4
Ingredients:
1.3 kg chicken drumsticks
2 tablespoons worcestershire sauce
1/4 cup honey
1 tablespoon seeded mustard
1 teaspoon curry powder

Method:
Place drumsticks into a shallow casserole dish. Mix together the remaining ingredients and combine with the drumsticks. Marinate for at least 2 hours in the refrigerator. Cook on P7 for 18 to 20 minutes, turning halfway through cooking. Serve with boiled rice or noodles.
To cook by Sensor Cook / Auto Cook:
Prepare as above. Refer to directions on page 38.

THAI CHICKEN WINGS (S) [A]
Serves: 3 to 4
Ingredients:
1 kg chicken wings
2 tablespoons soy sauce
2 tablespoons fish sauce
2 tablespoons lime juice
1 teaspoon crushed garlic
1 teaspoon crushed ginger
1 teaspoon crushed chilli

Method:
Place wings into a shallow dish. Combine remaining ingredients and pour over wings. Marinate for at least 2 hours in the refrigerator. Drain chicken from marinade and return to dish. Cook on P7 for 15 to 20 minutes, rearranging halfway through cooking.
To cook by Sensor Cook / Auto Cook:
Prepare as above. Refer to directions on page 38.

ZUCCHINI SLICE
Serves: 4 to 6
Ingredients:
4 rashers bacon, diced
1 onion, diced
2 cups grated zucchini
2 cups grated carrot
1 cup grated tasty cheese

### Chicken Rolls with Honey Mustard

**Serves:** 4 to 6

**Ingredients:**
- 8 chicken thigh fillets
- 16 prunes, pitted
- 8 green onions, sliced
- 2 tablespoon flaked almonds
- 4 rashers rindless bacon, halved lengthwise

**Honey Mustard Glaze**
- 1 tablespoon brown sugar
- 1 tablespoon French mustard
- 1 tablespoon honey
- 10 g butter, melted
- ground black pepper

**Method:**
Open out each thigh fillet and trim away fat. Place 2 prunes, some green onion and a few flaked almonds on each fillet. Roll fillets up and wrap a piece of bacon around each one. Secure with toothpicks. Blend all glaze ingredients together in a small bowl. Place chicken into a 3-litre dish in a single layer and brush with glaze mixture. Cook on P7 for 16 to 20 minutes, turning halfway through cooking.

### Chicken and Asparagus Risotto

**Serves:** 4

**Ingredients:**
- 300 g fresh asparagus, chopped
- 2 tablespoon olive oil
- 1 1/2 cups arborio rice
- 1 clove garlic, crushed
- 4 cups boiling chicken stock
- 2 cups coarsely chopped cooked chicken
- 1/4 cup grated fresh parmesan cheese
- 1/4 cup cream
- 1 tablespoon chopped parsley
- ground black pepper
- extra coarsely grated parmesan cheese

**Method:**
Place asparagus into 2-litre dish and cook on P10 for 1 minute. Set aside. Place oil, rice and garlic in a large microwave safe bowl. Cook covered on P10 for 1 minute. Add 2 cups of boiling chicken stock, cook on P10 for 5 minutes. Stir twice during cooking. Add remaining chicken stock and cook on P10 for another 5 minutes. Add remaining ingredients along with asparagus and stir into risotto. Cook covered on P10 for 2 minutes. Stand for 5 minutes. Serve topped with extra parmesan and black pepper.

**HINT:**
- A No. 15 (1.5 kg) chicken will make 4 cups of diced cooked chicken.
- 2 half breasts will make 2 cups of diced cooked chicken.
- 1 chicken maryland will make 1 cup of diced cooked chicken.

### Honey Sesame Drumsticks (S)

Cooking Tender Cuts of Meat using Micro Power

For best results, select roasts that are uniform in shape.
Place meat on a microwave rack in a suitable dish.
Beef rib roast should be placed cut-side down. Other bone-in roasts should be placed fat-side down.
Boneless roasts should be placed fat-side up.
Halfway through cooking, turn roasts. Half hams should be shielded by wrapping an 8 cm wide strip of foil around the large end of the ham. Secure to the body of the ham with wooden toothpicks. Fold 3 cm over cut surface. For shank ham halves, shield shank bone by cupping it with foil. One third of the way through cooking, remove ham from oven and cut off skin. Turn fat side up and resheild edges. If desired, glaze last 10 to 20 minutes of cooking.
Loosely cover baking dish with wax paper or paper towel to prevent splatter. If a large amount of juice accumulates in the bottom of the dish, drain occasionally. If desired, reserve for making gravy. Multiply the weight of the roast by the minimum recommended times per 500g. Programme Micro Power and Time.
Meats can be shielded at the beginning of cooking or halfway through cooking. If you wish to shield at the beginning of cooking, remove foil halfway through the cooking time. Beef and pork rib roasts should be shielded around the bones. Foil should extend about 5 cm down from bones. The Shank and thin ends of boneless roasts should also be shielded. Make sure foil does not touch the sides of the oven, as arcing may occur. Canned hams should be shielded on the top cut-edge with a 3 cm strip of foil. Wrap strip of foil around ham and secure to body of ham with wooden toothpicks. Fold 2 cm over cut surface. After heating, check temperature using a meat thermometer. The thermometer should not touch bone or fat. If it does, the reading could be inaccurate. Lower temperatures are found in the centre of the roast and in the muscle close to a large bone, such as a pork loin centre rib roast. If the temperatures are low, return meat to the oven and cook a few more minutes at the recommended power level. DO NOT USE A CONVENTIONAL MEAT THERMOMETER IN THE MICROWAVE OVEN. Let stand, covered with foil, 10 to 15 minutes. During standing time the internal temperature equalises and the temperature rises 5°C to 10°C.

Cooking Less-Tender Cuts of Meat using Micro Power

Less-tender cuts of meat such as pot roasts should be cooked in liquid. Use 1/2 to 2 cups of soup, broth, etc. per 500g of meat. Use an oven cooking bag or covered casserole when cooking less-tender cuts of meat. Select a covered casserole deep enough so that the meat does not touch the lid. If an oven cooking bag is used, prepare the bag according to package directions. Do not use wire or metal twist-ties. Use the nylon tie provided, otherwise, use a piece of cotton string or a strip cut from the open end of the bag. Make six 2 cm slits in top of bag to allow steam to escape. Multiply the weight of the roast by the minimum recommended minutes per 500g as suggested in the chart below. Programme Micro Power and Time. Turn meat over halfway through cooking. Meat should be tender when cooked.

Hint:
It is better to cook meat for a lesser time in a recipe and add extra time if needed. This will prevent over cooking.

Cooking Casseroles by Sensor Cook (500g-2.0kg) (Weight includes all ingredients) (S)

• Suitable for cooking casseroles with less tender cuts of meat combined with liquid and vegetables.
• Cut meat and vegetables into even size pieces.
• Place in a suitable size dish. Dish should be approximately ¾ full.
• Do not use plastic dishes as incorrect cooking time may result.
• Add 1½ to 2 cups of soup, broth or stock per 500 g of meat.
• Cover securely with plastic wrap or a well fitting lid.
• During the cooking time, the oven will 'beep' and instruct you to 'STIR'.
• At the end of cooking time, allow the casserole to stand for 5 to 10 minutes.

To Operate by Sensor Cook:
Select Casseroles, then Start.

COOKING FROZEN VEGETABLES BY SENSOR COOK / AUTO COOK
(125 g - 1.0 kg) by Sensor Cook
(120 g - 750 g) by Auto Cook
- Suitable for all types of frozen vegetables.
- Place in a suitable size dish.
- Best results are achieved if large quantities are placed in a single layer.
- Add 1 tablespoon to ¼ cup water to vegetables, if desired.
- Butter, herbs etc. may be added before heating, but do not add salt until serving.
- Cover dishes securely with plastic wrap or a fitted lid.
- During the cooking time, the oven will ‘beep’ and prompt you to stir and rearrange vegetables.
- At the end of the cooking time, stir vegetables and let stand, covered, for 2 to 3 minutes.

To Operate by Sensor Cook:
Select Frozen Vegetables, then press Start.
To Operate by Auto Cook:
Press Auto Cook to Frozen Vegetables. Select the serving / weight, then press Start.

• During the cooking time, the oven will 'beep' and prompt you to stir and rearrange the vegetables.
• At the completion of cooking, stir larger quantities of vegetables. Let stand, covered, for 2 to 3 minutes.
COOKING DRIED BEANS OR PEAS BY MICRO POWER

Place hot tap water in 4-litre dish. Bring hot water to the boil on P10 for 10 to 12 minutes. Add beans and 2 tablespoons oil to water. Cook according to directions in chart. Stir. Allow to stand, covered, for 15 to 20 minutes.

Note: Beans such as red kidney beans and lima beans should be soaked overnight before cooking. 250 g of dried beans equals about 3 cups cooked beans. Use in place of canned beans.

Cooking Rice by Sensor Cook (S) / Auto Cook (A)

- Minimum weight 1 cup / Maximum weight 2 1/2 cups
- Suitable for cooking short and long grain rice including specialty rices.
- It is not suitable for cooking brown rice or wild rice.
- Place rice with water (at room temperature) in a suitable dish. We recommend the following proportions of rice to tap water:

<table>
<thead>
<tr>
<th>Rice</th>
<th>Water</th>
<th>Dish Size</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 cup</td>
<td>2 cups</td>
<td>3 litre</td>

</tbody>
</table>

It may be necessary to adjust the water to your personal preference.
- Using a large size dish will prevent the rice from boiling over.
- Do not cook rice in plastic dishes as incorrect cooking times may result.
- At the completion of the cooking time, let stand 5 to 10 minutes.

Sensor Cook (S):
- Cover dish securely with plastic wrap.
- During cooking, the oven will 'beep' and instruct you to stir and 'REMOVE COVER'. Remove the plastic wrap and stir. There is no need to cover the rice again.

To Operate: Select Rice, then press Start.

Auto Cook (A):
- Leave dish uncovered.

To Operate: Press Auto Cook to Rice. Select the serving / weight, then press Start.

Cakes, Desserts and Slices
Cakes, Desserts and slices can successfully be cooked in the microwave oven if a few simple rules are followed. See individual recipes for instructions.

**Cooking Cakes by Micro Power**
- The texture of cakes cooked in the microwave oven is not the same as cakes cooked in a conventional oven, but it is a convenient way of cooking cakes.
- Do not use metal cake tins. Plastic dishes and pyrex, give the best results when cooking cakes. Grease the dish and line with paper towel or bake paper to absorb excess moisture.
- Round or oval shaped dishes produce the most even cooking results. Square cakes may need the corners shielded with foil to prevent overcooking.
- Choose light coloured cakes that can be iced or substitute brown sugar for white sugar and sprinkle the top of cake with spices to give a darker appearance.
- Do not fill cake pans more than half full. Microwaved cakes rise substantially more than conventionally cooked cakes.
- Cakes need to be well mixed but do not over beat. Creaming with an electric mixer or food processor is not necessary. Use a fork to mix as the microwave aerates the mixture as it cooks.
- Do not cover cakes as the top will steam.
- Cakes should be removed from the oven just before they look cooked as the cooking process will finish during standing time.
- Chocolate cakes cook slightly faster than plain cakes.
- Cakes containing a large amount of whisked egg white will not cook successfully in the microwave oven.

**Quick Mix Chocolate Cake**

Serves: 4 to 6

**Ingredients:**
- 1 cup self-raising flour
- 1 cup caster sugar
- 2 tablespoons cocoa
- 3 tablespoons butter, softened
- 2 eggs
- ½ cup milk

**Method:**
Sift all dry ingredients into a bowl. Add butter, eggs and milk. Beat with wire whisk for 1 to 2 minutes. Grease 2-litre plastic ring mould and line with paper towel. Pour mixture into mould and cook on P7 for 5 to 7 minutes. Stand, covered, for 5 minutes before turning out. Cool on wire rack.

**Tip:** To soften butter cook on P5 for 10 to 20 seconds.

**Packet Cake**

**Ingredients:**
- 1 packet cake mix (340 g)
- Ingredients as recommended by manufacturer.

**Method:**
Mix cake and other ingredients with a metal spoon. DO NOT OVERBEAT. Pour into 20 cm round dish that has been lightly greased and lined with paper. Cook on P8 for 4 to 6 minutes. Stand and allow to cool before removing.

**Variations:**
- 1 tablespoon jam added to batter before cooking.
- Add 1 cup sour cream to batter and halve water suggested by manufacturer.
- Half a cup chopped nuts, ¼ cup brown sugar and 1 teaspoon cinnamon. Mix and place on base of cake dish before cooking cake.
- Melt two tablespoons honey and 30 g butter in glass jug on P10 for 30 to 60 seconds. Pour over just baked buttercake. Sprinkle with cinnamon. Serve warm with cream or custard as dessert or serve cold with cream as tea cake.
- A quarter cup of toasted mesli mixed with 1 tablespoon marmalade and placed in the base of the dish.

**Tip:** Packet cakes are best mixed by hand as the microwave will do the aerating.

**Sultana Cake**

Serves: 4 to 6

**Ingredients:**
- 100 g butter
- 1 cup sultanas
- 1 cup brown sugar
- 1 cup milk
- 1 egg, beaten
- 2 cups self-raising flour

**Method:**
Place butter, sultanas, brown sugar and milk in heat resistant mixing bowl. Cook on P10 for 3 to 4 minutes. Stir halfway through cooking. Allow to cool. Add egg and flour. Pour batter into base of lined 20 cm round dish. Cook on P6 for 9 to 11 minutes. Let cool, loosely covered, with plastic wrap on wire rack.

**Hint:**

TO SOFTEN DRIED FRUIT:
Place 1 cup dried fruit into a small bowl. Add 2 tablespoons of water. Cover with plastic wrap and cook on P10 for 2 to 3 minutes.

TO TOAST COCONUT:
Place ½ cup of coconut on pyrex pie plate. Cook on P10 for 1 to 2 minutes, stirring occasionally.

**Hint:**

TO SOFTEN CREAM CHEESE: remove from wrapping. Cook on P3 checking every 30 seconds for softness.

JUICING CITRUS: to release more juice from citrus fruit, heat on P10 for 20 to 30 seconds. Stand then juice.
MOCHA CARROT CAKE
Serves: 4 to 6

Ingredients:
- 1 cup self-raising flour
- 1/2 teaspoon bicarbonate of soda
- 1/2 cup caster sugar
- 1/2 cup crushed pineapple
- 1 cup grated carrot
- 3/4 cup chopped pecan nuts
- 60 g chocolate
- 2 eggs
- 1/3 cup oil

Icing
- 60 g cream cheese
- 20 g butter
- 1 1/2 cups icing sugar
- 1 tablespoon lemon juice
- 1/4 cup chopped pecan nuts

Method:
Place flour, bicarbonate of soda, sugar, pineapple, carrot and pecan nuts in a bowl. Place chocolate into a small bowl and cook on P5 for 40 to 60 seconds. Stir halfway through. Add melted chocolate, eggs and oil to flour mixture. Mix until well combined. Grease a microwave safe ring dish. Pour cake mixture into dish and cook on P7 for 6 to 8 minutes. Let stand, covered, for 5 minutes before turning out to cool. Beat together all icing ingredients except pecan nuts. Spread icing over cooled cake and sprinkle with pecan nuts.

BANANA LOAF
Serves: 4 to 6

Ingredients:
- 90 g butter
- 3/4 cup brown sugar
- 1 egg
- 2 ripe bananas, mashed well
- 3/4 cup grated carrot
- 1 1/2 cups self-raising flour
- 1/3 cup milk

Method:
Cream butter and sugar until light and fluffy. Add egg and beat well. Add banana and carrot. Add sifted flour and milk to mixture alternately. Mix until well combined. Grease and line with grease proof paper, 20 cm x 10 cm loaf dish. Pour batter into dish and cook on P6 for 6 to 8 minutes. Stand, covered, with plastic wrap on wire rack to cool.

Tip: To prevent corners from overcooking, cover ends carefully with foil.

TIRAMISU
Serves: 4 to 6

Ingredients:
- 1 tablespoon ground coffee beans
- 2 tablespoons rum
- 500 g pkt sponge finger biscuits
- 3 eggs, separated
- 2 tablespoons sugar
- 100 g dark chocolate
- 500 g mascarpone cheese
- 2 tablespoons cocoa

Method:
Prepare 2 cups of slightly sweetened espresso coffee using ground coffee beans. Place coffee and rum into a wide bowl and quickly dip sponge biscuits into the mixture, making sure they are wet but not dripping. Set aside. Melt chocolate on P5 for 1 to 1 1/2 minutes. Allow to cool slightly. Beat together egg yolks and sugar and add the mascarpone cheese, stir until smooth. Beat the egg whites until they hold stiff peaks and fold into the cheese mixture. Swirl chocolate through the cheese mixture. Arrange 1/3 of the sponge biscuits into the base of a dish top with 1/3 the cheese mixture, repeat layers ending with biscuits. Cover and refrigerate for at least 5 hours. Dust liberally with cocoa before slicing to serve.

CHOCOLATE MOUSSE
Serves: 4

Ingredients:
- 125 g dark chocolate
- 1 tablespoon brandy
- 2 eggs, separated
- 300 ml cream, whipped

Method:
Break chocolate into small pieces. Place in a microwave safe bowl and cook on P5 for 1 to 1 1/2 minutes. Add brandy and egg yolks. Beat until smooth. Fold cream into chocolate mixture. Beat egg whites until stiff peaks form. Gently fold into chocolate mixture and spoon into one large or 4 individual serving dishes. Refrigerate until set.

BAKED APPLES
Serves: 4

Ingredients:
- 4 large cooking apples
- 3 tablespoons butter
- 4 tablespoons brown sugar
- 100 g chopped raisins
- 2 tablespoons chopped pecans
- 4 tablespoons golden syrup

Method:
Score the skin around the middle of the apple. Cream butter and sugar until soft. Add raisins and pecans. Fill the centre of apples with stuffing. Place into shallow casserole dish. Pour one tablespoon of golden syrup over each apple. Cook on P10 for 7 to 9 minutes or until soft. Let stand, 2 to 3 minutes, before serving.
INDIVIDUAL CHRISTMAS PUDDING

Makes: 8

Ingredients:
- 100 g sultanas
- 150 g raisins
- 50 g craisins
- 100 g dates, chopped
- 100 g glace ginger, chopped
- ½ cup brandy
- ½ cup butter
- ¾ cup firmly packed brown sugar
- 2 eggs
- ½ teaspoon cinnamon
- ½ teaspoon mixed spice
- ½ teaspoon nutmeg
- ¼ cup flour
- ¼ cup pie apple
- ¾ cup fresh breadcrumbs
- 1 tablespoon golden syrup
- 1 tablespoon parisienne essence

Method:
Place all dried fruits and brandy into a 2-litre bowl. Mix and cook uncovered on P3 for 10 minutes. Stir halfway through cooking. Cool. Beat butter and sugar in a large bowl with an electric mixer until light and fluffy. Add eggs, one at a time, beating between each addition. Stir in cooled fruits, then remaining ingredients. Grease 4 × 200 ml microwave safe cups. Place half a cup of mixture into each cup, pushing mixture in firmly. Smooth over the top of puddings with the back of a spoon. Place cups evenly around the edge of the microwave turntable and cook uncovered on P3 for 20 minutes. Stand for 5 minutes before turning out. Repeat with remaining mixture. Serve with cream or custard.

- 1 tablespoon cornflour

**Method:**
Combine sugar and water in a 3-litre bowl. Cook on P10 for 2 to 3 minutes. Add berries. Cook on P10 for 3 to 4 minutes. Blend water and cornflour. Mix into berry sauce. Cook on P10 for 2 minutes. Serve hot or cold with ice cream.
Preserving

Precautions:
Do not use your oven for home canning or the heating of any closed jar. Pressure will build up and the jar may explode. In addition, the microwave oven cannot maintain the food at the correct canning temperature. Improperly canned food may spoil and be dangerous to consume.

Jars and Bottles
Jars and bottles can be used to warm food to serving temperature. If the lid is removed first. Cooking should not be done in these containers since most are not heat resistant and during extended heating times, heat from food would cause cracking or breaking.

Thermometers are available for use in microwave oven. DO NOT USE CONVENTIONAL MERCURY TYPE CANDY OR MEAT THERMOMETERS in food while cooking in the microwave oven. Alternatively, a conventional meat thermometer may be used after the food is removed from the oven.

Sterilizing Jars
Jam jars can be sterilized by microwave ready for your jams. Half fill with water and heat them on HIGH power until water boils (approx. 3 mins, for 2 jars). Empty and drain upside down on kitchen paper. The jars should be warm when filled with jam.
