COOLING ONLY

**Panasonic** 

We face a time in which "quality air" differentiates business. It's a time for Panasonic to fully display its strengths. Our ability to assemble and build superior systems isn't just due to the rich resources we have as a comprehensive electronics manufacturer, but also to Panasonic's 100 years of tradition, where each person thinks and acts on their own initiative while working in a team to reach further heights. We do not compromise. Each of our independent selves is a one stop solution. We face our customers' challenges together with our customers and do all that we can to build effective systems. As a true partner for our customers, we strive to always be at the forefront of business.

 Please read the Installation Instructions carefully before installing the unit, and the Operating Instructions before using it.

# **FSV-EX** Advantages

The most efficient, powerful and quiet system in Panasonic's history. There has never been a VRF system like it. It's the story of a true game changer - Panasonic FSV-EX.

DUS .

## **Extraordinary Energy-Saving** Performance

The FSV-EX marks a revolutionary step forward in VRF efficiency. A look at the incredible EER value clearly indicates that. What's more, this high EER value is achieved even during part load operation. This shows the extraordinary energy-saving performance the FSV-EX is capable of providing.

2

Numerous technological innovations, including an more comfortable building environment.

# **Multiple large-capacity** all inverter twin rotary compressor

Two independently controlled inverter compressors achieve high efficiency. Redesigned components in the body provide performance improvement especially in the rated cooling condition and EER performance.

## Enlarged heat exchanger surface area with triple surface\*

The new heat exchanger features a triple-surface construction. Compared to the divided dual-surface construction in current models, there is no division of space and the area for heat exchange is larger. Also, highly efficient piping pattern increases heat exchange performance by 5%.\*

#### \* For 8 and 10 HP of ME2, and 8, 10 and 12 HP of MS3, the heat exchanger is 2-row design

## Extended Operation Range Up to 52°C

The FSV-EX can provide cooling even when the outside temperature reaches a maximum of about 52°C. And amazingly, it can still operate at 100% capacity when the outside temperature is as high as 43°C. This high power capability enables reliable operation even under extremely high temperature conditions.

## **Low-Noise Operation**

improved compressor and a newly designed bell mouth and larger fan, have dramatically reduced the outdoor noise level. The result is an even

(multiple compressors for more than 14HP)

FSV-EX Series / Exclusive Feature 1 /

# **Extended Operation Range** up to 52°C

### High reliability even under high temperature conditions

Designed to be durable enough to withstand extreme heat, FSV EX ensures reliable cooling operation over an extended operation range up to 52°C.

#### **OPERATING RANGE**

### Full-capacity Operation up to 43°C

The FSV-EX can provide cooling even when the outside temperature reaches a maximum of about 52°C. And amazingly, it can still operate at 100% capacity when the outside temperature is as high as 43°C. This high power capability enables reliable operation even under extremely high temperature conditions.

#### **CAPACITY RATIO (COOLING)**

<Test Condition> 12HP model, IU/OU capacity ratio:100%, Indoor Condition:27<sup>°</sup>C [DB]/19<sup>°</sup>C [WB] Competitor A spec is from technical data book.

## **Extraordinary Energy-Saving** Performance

#### **Practical Design for Actual Operation**

Panasonic builds air conditioning systems not only with a high EER for rated operation, but also with Seasonal-EER appropriate to the customer's actual environment of use. For instance, with rated operation, outdoor temperature is constant at 35°C, but in reality the outdoor temperature is continuously changing. Consequently, required air conditioning performance also changes. That's why Panasonic implements the following kind of proprietary control.

- 1. Set temperature is rapidly attained; full-load operating time is kept to a minimum.
- 2. The frequency of forced oil recovery is minimized. The volume of oil within the compressors is monitored precisely by sensors, so forced oil recovery under full-load operation is conducted only when necessary. Since this suppresses noise due to oil recovery, comfort is maintained.
- 3. Panasonic pursues a high EER, of course, as well as a high EER in part load for energy-saving performance under a broad range of loads.

Panasonic's design concept contributes to substantial energy cost reductions.

## **Intelligent 3-stage Oil Management System**

In a VRF system, where lengthy piping and a large number of indoor units need to be controlled collectively, the key to maintaining the system's reliability is to ensure an appropriate amount of oil is secured in the compressors. In order to avoid oil shortage in the compressor, maximum operation is normally forcibly conducted at regular intervals to recover oil from indoor units. This method, typically employed in a standard VRF, causes the system to overheat or overcool and thus waste energy.

In Panasonic VRF systems, a sensor for detecting oil levels is mounted in each compressor. In installations with multiple outdoor units, a shortage of oil in one compressor can be compensated for by recovering oil either from another compressor in the same unit, from a compressor in an adjacent outdoor unit, or from a connected indoor unit. Panasonic VRF systems provide users with a comfortable environment while saving energy.

The Panasonic system efficiently manages oil recovery in three stages; minimizing the frequency of forced oil recovery while reducing energy cost and maintaining comfort.

## **STAGE 1**

Panasonic compressors are equipped with sensors which monitor oil levels precisely at all times. If oil levels fall, oil can be transferred from other compressors within the same outdoor unit.

## **STAGE 2**

If oil levels in all compressors within the outdoor unit fall, oil can be replenished from adjacent outdoor units.

## **STAGE 3**

Forced oil recovery is implemented only if oil levels become insufficient in spite of above measures. The Panasonic system's design concept is radically different from conventional oil systems.

### Features of 3-stage oil recovery design

#### Oil sensors installed in each compressor 1 Oil sensors installed in each Panasonic compressor precisely monitor oil levels, eliminating

### Highly functional oil separator

2

Thanks to extended separate piping, oil recovery efficiency reaches 90%, minimizing the oil to be discharged from the compressor.

# **Panasonic VRF: Top In Comfort**

#### Energy savings × Comfortable air conditioning ~Variable Evaporation Temperature (VET)~

Since 2006, all Panasonic VRF systems have included special VET technology, with variable refrigerant temperature, as standard. Our 'smart logic' system checks the temperature every 30 seconds, automatically adjusting the refrigerant temperature according to actual demand and outdoor conditions.

Calculate indoor refrigerant temperature and control the airflow automatically based on the difference between the setting temperature and actual indoor temperature. \* When fan speed is Auto.

Determine system refrigerant temperature and control compressor speed.

Achieves room-by-room comfort and overall system energy savings by controlling optimal refrigerant temperature and circulation volume based on all information of the entire system.

Combination of VET technology and inverter compressor achieves both energy savings and comfort by smoothly controlling the compressor to match the air conditioning load without stopping the compressor for optimum performance.

Image of room temperature change during cooling operation by scene.

1) Normal environment

2) Environment with severe cooling load

If the set temperature is not reached after 25 minutes of operation in special environments with severe cooling loads, such as spaces with outside air entering, the system temporarily cancels energy-saving-oriented

> If energy-saving operation is continued, it takes time to reach the target temperature

Returns to energy-saving operation after reaching the set temperature.

## **ECONAVI Detects Inefficiencies** and Saves Energy

### Detection of the level of activity enables precise power saving.

Presence or absence of people at their desks and the level of activity in the office are detected in real time. Set temperature is automatically adjusted to optimise the lower power consumption.

Reduced cooling when there are fewer people

At night Automatic Thermo Off depending on conditions at the end of the day'

## Thorough cooling when there is a high level of activity Human activity and presence detection Activity detection

Presence	detection								
After 20 mins absence	After 3 hours absence								
Cooling Set Temp. +2°C Cooling Thermo OFF									
Heating Set Temp2°C Heating Thermo OFF*									
After 3 hours the sett	ing can change to Stop								

After 3 hours the setting can change to Stop or Temperature Shift

## ECONAVI

Pillars, walls, cabinets, and other fittings obstruct the sensor, reducing the area of detection and lowering the energy-saving effect. Taking into consideration blind spots, Panasonic enables the optimum layout for sensors in any office.

### **ECONAVI VRF Field Test**

ns, the setting can change to Switch Off After 3 Hours, Thermo Off or Temperature Shift.

#### CZ-CENSC1 Panasonic enables use with various types of indoor units

Providing outstanding energy-saving performance, Panasonic's inverter VRF System can be connected to ECONAVI to detect when energy is being wasted. ECONAVI senses the presence or absence of people and the level of activity in each area of an office. When unnecessary heating or cooling is detected, indoor units are individually controlled to match office conditions for energy-saving operation.

**Energy-saving effect** tested and verified by Field test

## **High-spec Wired Remote Controller**

CZ-RTC5B Actual size

#### Large 3.5" Full-dot LCD with White LED Backlight

Characters and icons are clearly displayed for improved visibility. The display is also large enough to provide a wide range of information for easy confirmation of operation conditions.

#### Stylish, Easy-to-use Touch Key Design

The elegant, flat design features large touch keys in a simple layout enabling easy, intuitive operation.

# **CAC Design Support Software**

Features the unique Drawing Capture Mode function providing More thorough spec-in and tender quotation support for easier, Faster completion of work.

#### **Drawing Capture Mode Diagram**

#### Schematic Mode Diagram

### The Panasonic CAC Design Support software can be used for all Panasonic FSV, FSV EX

Panasonic has identified the importance of ever-increasing demands for fast and accurate responses to customer requests in our industry. More and more emphasis is being placed upon energy-efficiency in our marketplace. The ability to calculate cooling/heating loads and produce information of actual design conditions is a major advantage to any architect, consultant, contractor or end user. Panasonic understands the time-poor and demanding industry we are in and we are pleased to announce the launch of the next generation of our system design software program. The Panasonic CAC Design Support Software has been customized to make the selection and design process as quick and easy as possible. The design package utilizes system wizards and import tools to enable both simple and complex systems to be created. In addition, the system will allow outdoor and indoor units to be dragged on an interactive desktop. This allows users to create everything from realistic floor plans with detailed piping and wiring schematics to send out with quotations, through to installation guidance drawings.

# **FSV Systems**

FSV systems are designed for energy savings, high efficiency, and high durability with strong cooling power even operating at high ambient temperature. Panasonic continuously apply advanced technologies to meet the requirements of diverse situations and contribute to the creation of comfortable living spaces.

## FSV-EX MS3 Series

Cooling-only model with space-saving system and high efficiency

### **Space-saving Combination Model**

- Cooling only Type
- Wide range of systems from 8HP to 96HP
- Class-leading EER of 5.3 (for 8HP model)
- Industry-leading low noise of 53.0 DB (8HP model)
- Cooling operation possible with outdoor temperature as high as 52°C (DB)
- Long maximum pipe length (up to 1,000 m)
- Up to 64 indoor units connectable
- External static pressure of 80 Pa

### **High Efficiency Combination Model**

- Cooling only Type
- Wide range of systems from 8HP to 64HP
- Class-leading EER of 5.3 (for 8HP model)
- Higher EER than the Space-saving Combination Model
- e.g., a combination of two 10HP units delivering 20HP reduces compressor load.

## 2-WAY FSV-EX ME2 Series

Extraordinary energy-saving performance and powerful operation

#### **Space-saving Combination Model**

#### Cooling or Heating Type | High-Durability Model

- Wide range of systems from 8HP to 80HP
- Class-leading EER of 5.3 (for 8HP model)
- Industry-leading low noise of 53.0 DB (8HP model)
- Cooling operation possible with outdoor temperature as high as 52°C (DB)
- Long maximum pipe length (up to 1,000 m)
- Up to 64 indoor units connectable
- External static pressure of 80 Pa
- Extended operating range allows heating with outdoor temperatures as low as -25°C (WR)

### High Efficiency Combination Model

#### Cooling or Heating Type | High-Durability Model

- Wide range of systems from 8HP to 64HP
- Class-leading EER of 5.3 (for 8HP model)
- Higher EER than the Space-saving Combination Model e.g., a combination of two 10HP units delivering 20HP reduces compressor load.

MS3 series movie HEAT PUMP

## 2-WAY Mini-FSV LE2 Series

#### For small-scale commercial and residential use

Cooling or Heating Type 1/3-phase

#### 4/5/6 HP **High-Durability Model**

- High external static pressure 35Pa
- Wide operation range: Cooling: -10°C to 46°C DB, Heating at: -20°C to 18°C WB • Refrigerant chargeless up to 50m
- Extraordinary energy saving: 5.08\* EER for 4HP model
- Demand response (Peak cut) by optional parts.
- Maximum number of connectable indoor units : 9\*
- Diversity ratio 50-130%
- DC inverter technology combined with R410A for excellent efficiency
- Demand response (Peak cut) by optional parts.
- One ampere starting current
- Full range of indoor units and control options
- Auto restart from outdoor unit
- Hi-durability outdoor unit model is available. Suitable for R22 renewal projects
- \* 6 HP only; 4 HP for 7 units, 5 HP for 8 units

## 2-WAY Mini-FSV LE1 Series

For small-scale commercial and residential use

Cooling or Heating Type 3-phase

8/10 HP

- High external static pressure 35Pa • Wide operation range: Cooling: -10°C to 46°C DB, Heating at: -20°C to 18°C DB
- Maximum number of connectable indoor units : 13
- Diversity ratio 50-130%
- DC inverter technology combined with R410A for excellent efficiency
- Actual piping length: 150m (Total piping length: 300m)
- System difference of elevation:50m /40m (outdoor above/below)
- Difference in elevation between indoor units:15m
- Demand response (Peak cut) by optional parts.
- One ampere starting current
- Full range of indoor units and control options
- Auto restart from outdoor unit
- Hi-durability outdoor unit model is available.
- Suitable for R22 renewal project

Panasonic

NEW ///

High-efficiency & Space-saving VRF system **FSV-EX MS3/ME2** 

### **Remarkable improvement on key components**

## **Extraordinary energy-saving performance**

 Multiple large-capacity all inverter compressors

(for middle and large outdoor units)

ENE

Two independently controlled inverter compressors achieve high efficiency. Redesigned components in the body provide performance improvement especially in the rated cooling condition and EER performance.

#### Enlarged heat exchanger surface area with triple surface\*

The new heat exchanger features a triple-surface construction. Compared to the divided dualsurface construction in current models, there is no division of space and the area for heat exchange is larger. Also, highly efficient piping pattern increases heat

exchange performance by 5%.

\* For 8 and 10 HP of ME2, and 8, 10 and 12 HP of MS3, the heat exchanger is 2-row design.

## Redesigned for smooth and better air discharge

Newly designed curved air discharge bell mouth for better aerodynamics

> The new curved shape with integrated top and bottom assure smooth exhaust flow. This gives more air-volume with same sound level, less power input at same air-volume.

#### Large air discharge area with new flush surface top panel

To reduce air resistance, instead of a tubular fan design, a new large flat fan guard design, flush with the top panel, is employed. This design leads to improvement in air resistance but also contributed to better appearance design.

Conventional model [ME1]

Conventional model [ME1]

New model [ME2]

High-efficiency & Space-saving VRF system

# **FSV-EX MS3/ME2**

#### Increased piping length for greater design flexibility ME2 MS3 \*1: 40 m if the outdoor unit is below the indoor unit. Adaptable to various building types and sizes Elevation difference of Max. 90m in case of ODU is Actual piping length : 200m higher than IDU may be allowed following certain Height conditions (equivalent piping length : 210m) Actual piping difference \*1. \*2: Please consult with Panasonic sales 90m length 200m engineers about the certain conditions in case of Max. total piping length:1,000m S piping elevation of over 50m or level difference (equivalent piping between indoor units over 15m is required. length 210m) \_evel difference MS3 series with exceeding 82HP does not support a between indoor height difference of 90m and a level difference of 30m. units 30m\*

#### Connectable indoor/outdoor unit capacity ratio up to 130%\*1

FSV systems attain maximum indoor unit connection capacity of up to 130 %\*1 of the unit's connection range, depending on the outdoor and indoor models selected. So for a reasonable investment, FSV systems provide an ideal air conditioning solution for locations where full cooling/heating are not always required. \*1 82HP and above is equivalent to 80HP.

MNcIU : Maximum Number of Connectable Indoor Unit

No.1 : Max connectable IDU capacity / kW (without condition) No.2 : Max connectable IDU capacity / kW (with below \*2 condition)

Note: If more than 100% indoor units are operated with a high load, the units may not perform at the rated capacity. For the details, please consult with an authorised Panasonic dealer

\*2 If the following conditions are satisfied, the effective range is "Max connectable IDU capacity / kW (with below \*condition) figures" written in above No.2.

) Obey the limited number of connectable indoor units.

ii ) The lower limit of operating range for heating outdoor temperature is limited to -10°CWB (standard -25°CWB). (Only for ME2 series.) ii) Simultaneous operation is limited to less than "Max connectable IDU capacity / KW (without condition) figures" written in above No.1.

#### Wide operating range

• Cooling operation is possible when outdoor temperature as low as -10°C DB

Cooling operation is possible when outdoor temperature as high as 52°C DB

• Heating operation is possible when outdoor temperature as low as -25°C WB

The remote controller temperature can be set from 18°C up to 30°C (Cooling), 16°C up to 30°C (Heating)\*. \* Depending on the type of remote controller.

\* For further information please refer to the capacity tables in the Technical Data Book.

#### High-durability outdoor unit

Corrosion-resistance treated for high resistance to rust and salty air to assure long-lasting performance.

Note: Selecting this unit does not completely eliminate the possibility of rust developina. For details concerning unit installation and maintenance, please consult an authorised dealer.

Specific model with suffix "E" has this treatment.

#### Prevents unit stoppages due to short circuits caused by geckos

One of the common causes of failures of the outdoor unit is electrical short circuits caused by geckos, small animals such as rats and insects entering the unit. The unit eliminates gaps that prevent geckos from entering the internal PCB and thus prevent operation stoppages.

#### High external static pressure on condensers

With a newly designed fan, fan guard, motor, and casing, new models can be custom-installed on-site to provide up to 80 Pa of external static pressure. An air discharge duct prevents shortages of air circulation, allowing outdoor units to be installed on every floor of a building.

EVE

#### Extended compressor life by uniform compressor operation time

The total run-time of compressors are monitored by a built-in microcomputer, which ensures that operation times of all compressors within the same refrigerant circuit are balanced.

Compressors with histories showing shorter run times are selected first, ensuring equal wear and tear across all units and extended the working life of the system.

\* Depend on accumulated operation time of each compressors \* Compressor priority has possibility to be changed (e.g) Case1: A→C→B→D, Case2: C→A→D→B, Case3: A→C→D→B, Case4: C→A→B→D

#### Demand response

Featuring Inverter control technology, all Panasonic FSV systems are Demand Response Management (DRM) ready. With this control, power consumption at times of peak load can be set in three steps to deliver optimum performance. This helps to reduce annual power consumption with minimal loss in comfort.

Demand control terminal is available to control 0-70-100% of capacities.

\*CZ-CAPDC3 is required as an option

#### Flexible Demand Response with the CZ-CAPDC2 \*1

Setting is possible as 0% or in the range from 40% to 100% (in steps of 5%). At the time of shipping, setting has been done to the three steps of 0%, 70% and 100%.

\*1 An outdoor Seri-Para I/O unit (CZ-CAPDC2) is required for demand input signal

#### GLOBALREMARKS

Rated conditions:	Cooling	Heating
Indoor air temperature	27°C DB / 19°C WB	20°C DB
Outdoor air temperature	35°C DB	7°C DB / 6°C WB

These specifications are subject to change without notice. High durable model (with suffix "E") has same specifications.

## 2-WAY FSV-EX ME2 Series SPACE SAVING COMBINATION MODEL

#### 8/10 HP

According to the installation site, you may choose the setting position in the depth direction of the anchor bolt from A, B or C.

A: (Installation hole pitch) For removing tube forward B: (Installation hole pitch) For removing the downward

C: (Installation hole pitch)

#### 12/14/16 HP

According to the installation site, you may choose the setting position in the depth direction of the anchor bolt from A, B or C.

A: (Installation hole pitch) For removing tube forward B: (Installation hole pitch) For removing the downward C: (Installation hole pitch)

#### 18 / 20 HP

According to the installation site, you may choose the setting position in the depth direction of the anchor bolt from A, B or C.

A: (Installation hole pitch) For removing tube forward B: (Installation hole pitch) For removing the downward

C: (Installation hole pitch)

unit: mm

unit: mm

## 2-WAY Mini-FSV LE Series

# **High External Static Pressure** 35Pa

#### High external static pressure 35Pa

When the unit is installed on a narrow balcony and exposed to the sun, the fence at the front side would restrict hot air from being discharged. Heat accumulated in an enclosure can cause over-heating. This could potentially result in damage or shorten the product's life span. A high external static pressure sends the air further away from the outdoor unit and through the fence. This provides better air circulation and distribution.

LE1 LE2 LEY

Previous model - Low pressure

When the pressure is low, hot air will accumulate in the unit thus affecting its work performance and of the unit above it as well.

Previous fan

High electrostatic pressure disrupted the airflow of the previous fan, lowering the air pressure and preventing hot air from being discharged far enough.

LE series - High pressure But with a high pressure of 35Pa, hot air is sent further away preventing overheating inside the outdoor unit enclosure.

#### LE series fan

The new LE Series fan has ribs extending near the blade tips, in a structure that resists deformation. During high electrostatic pressure, this blade shape suppresses disruptions in the airflow, and a high air pressure of 35 Pa discharges the hot air a sufficient distance.

#### Refrigerant chargeless up to 50m

Up to 50m of piping without additional gas charging makes installation flexible, easy, and hassle-free.

A 50m pipe length is sufficient for most residential and small business buildings. When total piping length exceeds 50m, additional refrigerant charge is required.

#### **Compact design**

Also, since Mini VRF LE Series is a single unit, it is possible to install the unit in more various places compared to the Single Split system.

#### Short height of 996mm

In addition to raising efficiency, we have made the outdoor unit more compact. It can now be installed in places that were previously too small.

## Wide range of connectable indoor units

An expansion from Panasonic VRF line up, the Mini-VRF is compatible with the same indoor units and controls as the rest of the VRF range.

#### Connecting image

Model	Max connectable indoor units	Max allowable indoor/outdoor
U-4LE2H4 / U-4LE2H7	7pcs.	50~130%
U-5LE2H4 / U-5LE2H7	8pcs.	50~130%
U-6LE2H4 / U-6LE2H7	9pcs.	50~130%
U-8LEY1V9	11pcs.	50~130%
U-8LE1H 7/ U-10LE1H7 U-10LEY1V9	13pcs.	50~130%

LE1 LE2 LEY

## 2-WAY Mini-FSV LE Series

#### High efficiency

The operation efficiency has been improved using highly efficient R410A refrigerant, a DC Inverter compressor, DC motor and a heat exchanger design.

#### COOLING FSV FS Multi

#### Energy savings design

LE1 LE2

LE1 LE2

LE1 LE2

0	Panasonic Inverter Compressor	A large-capacity inverter compressor has been adopted. The inverter compressor is superior in performance with improved partial-load capacity.
2	Printed Circuit Board	The number of PCB is 2 pieces for making maintenance easier.
3	Accumulator	A large accumulator has been adopted to maintain compressor reliability because of the increased refrigerant quantity, which allows an extended max piping length.
4	DC Fan Motor	Checking load and outside temperature, the DC motor is controlled for optimum air volume.
6	Newly Designed Fan	The newly designed fan blades have been developed to inhibit air turbulence and to increase efficiency. As fan diameter has been increased its size, the air volume has been increased while maintaining a same sound level.
6	Heat Exchanger & Copper Tubes	The heat exchanger size and the copper tube sizes in the heat exchanger have been redesigned to increase efficiency.
1	Oil Separator	A centrifugal separator has been adopted to improve oil separation efficiency and reduce refrigerant pressure loss.

#### Flexible demand response with the optional terminal block

#### **Demand Response**

Featuring Inverter control technology, all Panasonic Mini-FSV systems are Demand Response Management (DRM) ready. With this control, power consumption at times of peak load can be set in three steps to deliver optimum performance. This helps to reduce annual power consumption with minimal loss in comfort.

\*Terminal block supplied as optional kit. (CZ-CAPDC3) Please ask you dealer.

#### Flexible Demand Response with the CZ-CAPDC2\*1

Setting is possible as 0% or in the range from 40% to 100% (in steps of 5%). At the time of shipping, setting has been done to the three steps of 0%, 70% and 100%.

\*1 An outdoor Seri-Para I/O unit (CZ-CAPDC2) is required for demand input signal.  $^{\star}$  Demand timer setting for high spec remote controller is available.

#### Wide operating range

- Cooling operation is possible even when outdoor temperature is as low as -10°C DB.
- Cooling operation is possible even when outdoor temperature is as high as 46°C DB.

The remote controller temperature can be set from 18°C up to 30°C \*1.

\*1 Depending on the type of remote controller.

#### Blue Fin condenser

The anti-corrosion Blue Fin treatment of the heat exchanger provides greater resistance against corrosion. All models are equipped with Blue Fin condenser.

#### High durability outdoor unit

Corrosion-resistance treated for high resistance to rust and salty air to assure long-lasting performance.

Note: Selecting this unit does not completely eliminate the possibility of rust developing. For details concerning unit installation and maintenance. please consult an authorised dealer.

\* Specific model with suffix "E" has this treatment

#### Quiet operation mode

- Quiet operation mode reduces outdoor unit operating sound down to 7dB than rating. • 3-step set point is available.
- External input signal is also available.
- \* Timer setting of quiet operation mode is available in High-spec Remote Controller (CZ-RTC5B/CZ-RTC6 series).

Cooling: -10°C DB ~ 46°C DB

\* For further information please refer to the capacity tables in the Technical Data Book.

# <sup>™</sup>24-hour nanoe<sup>™</sup>X **Air Purification**\*

While the general filters in air purifiers are effective against airborne bacteria and viruses, nanoe<sup>™</sup> X also works to inhibit longer-living, adhered bacteria and viruses. As well as this, the Panasonic Comfort Cloud and WLAN smart adaptor (CZ-CAPWFC1) gives you access to your air conditioner anywhere, anytime, so you can turn nanoe<sup>™</sup> X on even while you're out and enjoy 24-hour quality air.

ntly turned on and operating in the air purification mode - nanoe™ span-on-surfaces-graphic-2020-3

Please refer to the

nanoe™ X website

## 24-hour nanoe<sup>™</sup> X air Purification, anywhere, anytime

Get 24 hr Quality Air for you and your loved ones by turning nanoe™ X on using Panasonic Comfort Cloud even when you're out. nanoe™ X functions in both cooling and heating modes and is maintenance-free, helping you keep your costs down with cleaner air.

- Cleans indoor air even when the space is not in use.
- No need to consume excessive electricity to clean the air.

nanoe™ X cleans indoor air while maintaining a comfortable temperature when people are present.

After business hours, nanoe™ X keeps cleaning indoor air in fan mode

\*In case of using 2.2 kW-7.3 kW 4 way cassette models with fan tap L, flap position 5, standard panel. Energy consumption may vary depending on models.

## nanoe<sup>™</sup> X device evolution

\* Measured using the ESR (Electron Spin Resonance) method (amount of hydroxyl radicals immediately after release from the generator). (Source: Panasonic internal research)

## nanoe™ X technology inhibits novel coronavirus

Our nanoe™ X technology has shown to suppress the activity of viurses & bacteria. Enjoy cleaner and quality air at home. Stay safer indoors with nanoe™ X.

Over 99.99%\* of the activity of the SARS-CoV-2 virus was inhibited

Device type: 10 x nanoe™ X (Mark 1) Subject: Novel coronavirus (SARS-CoV-2 Test Institute: TEXCELL (France) Test duration: 2 hours

## nanoe™ X Mark 3 achieves virus inhibition in a larger space in a shorter time

Mark 3 (100 x) Device: 4-Way Cassette Large-Space Test for Adherent Virus (Bacteriophage) In a large space of 139 m<sup>3</sup> (56 m<sup>2</sup>), a 98.81% inhibition rate was achieved in 4 hours.

Notes: 1) The virus infectious titer was measured and used to calculate the inhibition rate. 2) This verification was designed to generate basic research data on the effects of nanoe™ X on the novel coronavirus in laboratory conditions. It was not designed to evaluate product performance

Please refer to the pe™ X website for the Mark 3 information

Device type: nanoe ™ X Generator Mark 3 Subject: Adhesive virus (coliphage) Indoor unit: 4-way cassette Test Institute: SGS Inc Test duration: 4 hours Report No.: SHES210901902584

# Smart comfort with CONEX

CONEX goes beyond simple remote control to combine sophistication with simplicity, offering IoT integration that connects directly to a variety of apps for next-generation solutions.

User friendly interface with stylish design measuring just 86 x 86 mm, CONEX is an extremely compact remote controller which perfectly matches with all kinds of modern building.

## Easy control and access for end users and installers with just one remote

User-friendly day day-to-day operation for end users and simplified set up for installers.

CONEX

25.°c

(CZ-RTC6/CZ-RTC6BL)

25.°c

(CZ-RTC6W/CZ-RTC6WBL)

## A next-generation remote control solution optimised for usability

## True-comfort for end user and installer – H&C Control App

#### Advantages

#### Comfort day-to day operations

It's now simpler than ever for end users to further customize settings to meet their needs and perform operations including basic settings.

### Straightforward suggestions to clients

Share a single screen with your customer and together tailor everything to meet their needs, from basic setup to weekly timers, all in real time.

#### Intuitive operation for easy configuration

Simplifies initial controller configuration as well as access to comprehensive settings including weekly timers and maintenance.

### Quicker configuration for multiple controllers

Save time and copy templates for weekly timers and settings to multiple remote controllers.

# Indoor Units

Wide choice of models depending on the indoor requirements

## Key Indoor Units Equipped DC motors

#### **ECONAVI** sensor

Providing outstanding energy-saving performance, Panasonic's inverter VRF System can be connected to ECONAVI to detect when energy is being wasted. ECONAVI senses the presence or absence of people and the level of activity in each area of an office. When unnecessary heating or cooling is detected, indoor units are individually controlled to match office conditions for energy-saving operation.

**ECONAVI Sens** CZ-CENSC1

ECONAVI

Activity or absence of people at their desks and the level of activity in the office are detected in real time. Cooling or heating is automatically adjusted for optimum operation required to lower power consumption.

#### Sensor is remotely located to maximize **T** the energy saving effect

Pillars, walls, cabinets, and other fittings obstruct the sensors, reducing the area of detection and lowering the energy-saving effect. Taking into consideration blind spots, Panasonic enables the optimum layout for sensors in any office.

#### High-spec Wired Remote Controller

#### Large 3.5" full-dot LCD with white LED backlight

Characters and icons are clearly displayed for improved visibility. The display is also large enough to provide a wide range of information for easy confirmation of operation conditions.

#### Stylish, easy-to-use touch key design

The elegant, flat design features large touch keys in a simple layout enabling easy, intuitive operation.

### All Ducted Series

#### Discharge air temperature control

Smart sensors control discharge air temperature	
for precise room temperature control.	Air
Possible to reduce cold drafts during heating	sen
operation.	E3 s

#### Wall Mounted / K2 (22~36), K2 (45~106) type

Compact design with flat surface enables seamless match with any type of room interior

#### Remote Temperature Sensor

CZ-CSRC3

CZ-RTC5B

#### Noise reducing external valve kit

To reduce noise level of expansion valve (Optional accessory)

CZ-P56SVK2 (for 22 - 56 type) CZ-P160SVK2 (for 73\* - 106 type)

\*When the pipe diameter is (Liquid) Ø6.35 - (Gas) Ø12.7, please use CZ-P56SVK2.

 This is a remote sensor which can be used with indoor units. Use it to detect the room temperature when no remote controller sensor or body sensor is used (connection to a system without a remote controller is possible). • For joint use with a remote control switch, use the remote control switch as main remote controller.

#### Indoor Units

## NEW /// **F3**TYPE Mid Static Adaptive Ducted

Control all aspects of your environment with exceptional performance and quiet operation. Vertical installation flexibility offers the perfect solution when ceiling heights are restricted.

S-22ME3E5AN / S-28ME3E5AN / S-36ME3E5AN S-45MF3E5AN / S-56MF3E5AN

S-90MF3E5AN

• Improved drain pan suitable for both horizontal

• nanoe<sup>™</sup> X : 100x for CAC (100 times more

nanoe<sup>™</sup> particle for wide commercial space)

• Accurate temperature control to reduce cold

/ vertical installation

drafts during operation

S-60MF3E5AN / S-73MF3E5AN S-112MF3E5AN / S-140MF3E5AN / S-160MF3E5AN

#### **Technical focus**

- 4 installation possibilities with horizontal and vertical mounting and selectable rear or bottom air inlet
- Space saving 250mm height
- DC fan motor for variable external static pressure control
- Industry-leading horizontal/vertical design
- Powerful 150Pa static pressure in a compact unit.
- Leading-class low sound levels from 20 dB(A)

#### Variable external static pressure control

Optimal airflow set-up is possible depending on ducting design and conditions.

#### Powerful 150Pa external static pressure in an industryleading horizontal/vertical installation design

Delivering static pressure up to 150Pa external static pressure, the industry-leading horizontal/vertical design offers the power you need in a compact form factor.

#### Improved drain pan design

Drain pan is shared in both cases horizontal and vertical installation. No need to alternate anymore.

#### Superior Air Quality

Combined with the strong static pressure this model ensures pristine nanoe™ X air travels unaffected even through multiple duct shapes at lengths of 10m, as well as making them ideal for use in larger spaces.

Bend once Bend twice Bend three times As the experiments demonstrate: even with a total ductwork length of up to 10 m, effectiveness of nanoe™ X is maintained.

Built-in Drain pump (DC motor pump)

Conce X

Generator Mark3

#### Space saving height of 250mm for all models

250mm standardised height provides easy and uniform installation for models with different capacities, especially when ceiling heights are restricted

#### Discharge air temperature control

- Possible to control discharge air temperature for accurate room temperature control.
- Possible to reduce cold drafts during heating operation.
- Note: Before spec-in, please consult with an authorized Panasonic dealer.

#### Selectable air inlet position

A removable panel allows air inlet position to be adjusted to enable rear or bottom entry, depending on ductwork installation.

#### System example

An inspection port (450 mm x 450 mm or larger) is required at the lower side of the indoor unit body.

#### More powerful drain pump

Using a high-lift built-in drain pump, drain piping can be elevated up to 690 mm from the base of the unit.

Optional accessory

Please refer to

the nanoe™ X

## M1TYPE Slim Low Static Ducted **Concealed duct**

The ultra slim M1 type is one of the leading products of its type in the industry. With a height of only 200 mm, it provides greater flexibility and adaptability for various applications. In addition, high efficiency and extreme low noise level make it highly suitable for hotels and small offices.

S-22MM1E5A / S-28MM1E5A / S-36MM1E5A

S-45MM1E5A / S-56MM1E5A

CZ-RTC6W CZ-RTC6WBL

Restart

Function

Built-in Drain Pump

#### **Technical focus**

• Ultra-slim profile: 200 mm for all models

Fan

Operation

- DC fan motor greatly reduces power consumption
- Ideal for hotel application with very narrow false ceilings
- Easy maintenance and service by external electrical box
- 40 Pa static pressure enables ductwork to be fitted.
- Includes drain pump
- Includes built-in filter.

#### Ultra-slim profile for all models

200mm height for all models allows installation in very narrow ceilings.

#### Drain pump with increased power!

Using the built-in high-lift drain pump, the drain piping rise height can be increased to 653 mm from the lower surface of the body.

# **Z1** TYPE Slim Low Static Ducted Twenty Series Concealed duct

The ultra slim Z1 type is one of the leading products of its type in the industry. With a height of only 200 mm, it provides greater flexibility and adaptability for various applications. In addition, high efficiency and extreme low noise level make it highly suitable for hotels and small offices.

S-73MZ1H4A

S-22MZ1H4A/ S-28MZ1H4A/ S-36MZ1H4A S-45MZ1H4A/ S-56MZ1H4A/ S-60MZ1H4A

self-diagnosis Automatic Function Fan

#### **Technical focus**

• Ultra-slim profile: 200 mm for all models

Operation

- DC fan motor greatly reduces power consumption
- Ideal for hotel application with very narrow false ceilings
- Easy maintenance and service by external electrical box
- 29 Pa static pressure enables ductwork to be fitted.
- Drain pump (optional)

#### Ultra-slim profile for all models

200mm height for all models allows installation in very narrow ceilings.

#### Drain pump with increased power! (optional)

Using the optional high-lift drain pump, the drain piping rise height can be increased to 700 mm from the drain pipe port.

# E2 TYPE High Static Ducted

Concealed duct / Air conditioning mode

High static and large airflow ducted for exceptional installation flexibility.

S-180ME2E5 / S-224ME2E5 / S-280ME2E5

Function

Automatic Fan

Operation

**Technical focus** 

- Design flexibility thanks to high static pressure and large air volume
- DC motor equipped
- Power input 45% less (compared to E1 type)

#### 3-step static pressure set up

• Discharge air temperature control to reduce cold

• Available Fresh Air Intake mode (See page 80-81)

drafts during heating operation

• Configurable air temperature control

You can select between the three Static Pressure modes of 270 Pa/140 Pa/60(72\*) Pa for extra installation flexibility.

#### Max. 270 Pa static pressure setting

A maximum static pressure setting of a high 270 Pa enables the use of long ducts for installation in a wide range of spaces. Ideal for large-scale offices, restaurants, and other facilities.

#### Sensible cooling 5-10% improved

New heat exchanger with  $\phi$  7mm pipe that increases the heat transfer surface to improve sensible cooling (5-10% improvement)

#### No Rap Valve Kit required

Thanks to improved performance, a Rap Valve Kit (CZ-P160RVK2) is no longer required.

#### Discharge air temperature control

- Equipped with 4 sensors (Intake/Discharge)
- Able to control discharge air temperature for accurate room temperature control.
- Possible to reduce cold drafts during heating operation.

## E2 TYPE Energy-saving High Fresh Air Ducted Concealed duct high static pressure

S-224ME2E5 / S-280ME2E5

# 

self-diagnosis

Function

High static and large airflow ducted for exceptional installation flexibility.

#### **Technical focus**

- 100% fresh air intake for ventilation purpose
- Design flexibility with high static pressure and large air volume
- DC motor equipped

#### **High Fresh System**

High Fresh System enables delivery of fresh outside air at almost the same temperature and humidity as indoor air without putting a burden on air conditioning.

- \* Capable of treating outdoor air only. Indoor air conditioner units are required to adjust indoor air temperature.

• Power input 45% less (compared to H1 type)

drafts during heating operation

• Configurable air temperature control

• Discharge air temperature control to reduce cold

#### Mix operation unit with standard indoor units

Possible to combine High Fresh Air ducted indoor unit and standard air ducted indoor units. When other indoor units are connected in same circuit, keep following capacity ratio. E2 type/Outdoor unit < 30%, and Total of indoors (incl. E2) /outdoor <100%

#### Discharge air temperature control

- Equipped with 4 sensors (Intake/ Discharge)
- Able to control discharge air temperature for accurate
- room temperature control.

#### Optional accessory

# E1 TYPE High Static Ducted

### Concealed duct high static pressure

The E1 range of ducted units offers improved design flexibility for extended duct layouts as a result of their increased external static pressures.

**Technical focus** 

• Complete flexibility for ductwork design

Operation

- Can be located into a weatherproof housing for external installation
- Discharge air temperature control to reduce cold drafts during heating operation
- Configurable air temperature control

#### System example

An inspection port (450 x 450 mm or more) is required at the lower side of the indoor unit body (field supply).

#### Discharge air temperature control

- Equipped with 4 sensors (Intake/Discharge)
- Able to control discharge air temperature for accurate room temperature control.
- Possible to reduce cold drafts during heating operation.

The K2 type wall mounted unit has a stylish smooth design with a washable front panel.

Small, lightweight, and low noise level makes it ideal for small offices and other commercial applications.

S-22MK2E5A / S-28MK2E5A S-36MK2E5A

S-45MK2E5A / S-56MK2E5A S-73MK2E5A / S-106MK2E5A

DC

#### **Technical focus**

- Closed discharge port when not in use
- Lighter and smaller units make installation easy
- Quiet operation
- Smooth and durable design
- Piping outlet in six directions

#### Washable front panel

• Air distribution is automatically altered depending on the operational mode of the unit

#### Noise reducing external valve kit

To reduce noise level of expansion valve. (Optional accessory)

#### Closed discharge port

When the unit is turned off, the flap closes completely to prevent entry of dust into the unit and to keep the equipment clean.

#### Compact indoor units make the installation easy

#### Quiet operation

Low operating noise level makes these units ideal for hotels and hospital applications.

#### Smooth and durable design

The smooth cover means these units match most modern interiors. Their compact size enables them to blend in, even in small spaces.

#### Piping outlet in six directions

Piping outlet is possible in the six directions of right, right rear, right bottom, left, left rear, and left bottom making installation easier.

#### Washable front panel

The indoor unit's front panel can be easily removed and washed for troublefree maintenance.

#### Air distribution is automatically adjusted depending on the operational mode of the unit

Air outlet angle is automatically adjusted for cooling and heating operation.

\*Receiver is included in the wall mounted indoor unit.

K2 (45-106) TYPE WALL MOUNTED Dimensions

Outdoor air temperature 35°C DB / 24°C WB 7°C DB / 6°C WB

#### K2 (22-36) TYPE WALL MOUNTED Dimensions

SIZE 22-36

1 Refrigerant tubing (liquid tube) ø6.35(flared) 2 Refrigerant tubing (gas tube) ø12.7(flared) 3 Drain hose (outer dia. ø16) 4 Rear panel (PL BACK) 5 Rear panel fixing holes (ø5 holes or 5X13 oval holes) 6 Tubing and wiring holes (ø70)

#### SIZE 45-106

Built-in drain pump allows flexible install and design options with up to 850mm lift. Long horizontal piping is also possible.

#### Easy to clean suction grille

Suction grille is able to make 90-degree turns.

#### 360° Wide & Comfortable Airflow

Comfortable air flow control and proper energy use. Flexible Air Flow direction control by individual flap control:

-4 Flaps can be controlled individually (by standard wired remote controller\*)

-Versatile air flow control to cover a wide variety of demands.

Temperature distribution by thermograph (cooling operation)

Simulation conditions: 140M 4-way ceiling-mounted cassette type in cooling mode / Floor area of 225 m / Ceiling height of 3 m

Ample airflow: 36 m³/min

Up to 850 mm

Panels & Panel parts

• Energy saving function: comfortable energy saving

and achieve more comfort and energy saving operation.

• Energy saving operation in case of low humidity during

unit: mm

The length of the suspension bolts should be selected so that there is a gap of 30 mm or more below the lower surface of the ceiling (18 mm or more below the lower surface of the main unit), as shown in the figure at right. If the suspension bolt is too long, it will touch the ceiling panel and the unit cannot be installed

Designed to fit perfectly into a 60 x 60 cm ceiling grid without the need to alter the bar configuration, the Y3 is ideal for small commercial and retrofit applications.

In addition, improvements to the Y3's efficiency make this model one of the most advanced units in the industry.

Function

DP Built-in Drain Pump

lease refer to the nanoe™ X website for the Mark 3 formation

- Technical focus
- Mini cassette fits into a 60 x 60 cm ceiling grid • Powerful drain pump gives 850 mm lift
- Multi-directional air flow
- Easy installation

- DC fan motor with variable speed and a new heat exchanger ensures efficient power consumption
- nanoe™ X : 100x for CAC (100 times more nanoe™ particle for wide commercial space). Inside cleaning by 100x nanoe™ + dry control

#### Compact design

Thanks to advanced Panasonic design, the panel is a compact 625 x 625 mm, offering elegant, unobtrusive installation even where space is limited.

#### Lighter and slimmer, easier installation

When only 230 mm of indoor body height, it can easily fit in limited spaces and tight spots. (Required 243 mm from bottom of panel to top of the unit)

#### Individual flap control

Keeps everyone comfortable by directing air where it's needed and away from where it isn't with individual flap control.

#### A drain height of up to 850 mm from the ceiling surface

The internal pump allows the drain pipe to be elevated up to 850 mm above the base of the unit.

DP

Built-in Drain Pump

#### Technical focus

Operation

• Airflow and distribution is automatically altered depending on the operational mode of the unit

- Drain up is possible up to 500 mm via the built-in drain pump
- Simple maintenance

#### Auto flap control

Airflow and distribution is automatically altered depending on the operational mode (cooling or heating) of the unit.

#### Drain up is possible up to 500 mm via the built-in drain pump.

Maintenance of the drain pump is possible from both sides, from the left side (piping side) and from the inside of the unit.

#### Simple maintenance

The drain pan is equipped with site wiring and can be removed. The fan case has a split construction, and the fan motor can be removed easily when the lower case is removed.

#### **D1 TYPE 1-WAY CASSETTE Dimensions**

#### (2) Two-direction ceiling-mounted system

(1) One-direction "down-blow" system

With 3 types of air-blow systems, the unit can be used in various ways.

"Down-blow" and "front-blow" systems are combined in a ceilingmounted unit to blow air over a wide area.

Powerful one-direction "down-blow" system reaches the floor even

#### (3) One-direction ceiling-mounted system

This powerful ceiling-mounted "front-blow" system efficiently airconditions the space in front of the unit. (Additional accessories required)

#### Optional accessory

## T2TYPE Ceiling Mounted **Ceiling mounted**

Providing outstanding energy-saving performance and comfortable, long-distance air flow distribution, it's recommended for stores and schools.

S-36MT2E5A / S-45MT2E5A S-56MT2E5A

S-73MT2E5A

S-106MT2E5A S-140MT2E5A

Function

Operation

#### **Technical focus**

- Lower sound levels
- Standardized height and depth for all models
- Long and wide air distribution

Automatic

Fan

- Easy to install and maintain
- Fresh air knockout

#### Compact Looking, Stylish, One-Motion Design

With its streamlined, one-motion form, the unit looks slim and compact when installed for a neat appearance in any room. When not operating, the louver closes to provide an elegant look while keeping the unit clean.

#### **Energy-Saving Technology Delivering Top-Class Efficiency**

Optimization of the shape of the casing and fan assures bigger air flow and higher efficiency. Energy-saving performance is top class in the industry.

Top Class Energy Saving

#### Comfortable, Long-Distance Air Flow Distribution

The shape of the outlet has been optimized to provide longdistance air flow distribution. Even in deep spaces, air flow reaches every corner for exceptionally comfortable air conditioning.

High Ceiling Setting	Air flow distance					
*Setting by remote control	112	140	160			
4.3m	12m	13m	13m			

#### **Multiple Piping Directions For Flexible** Installation

The 5-directional drain pipe and 3-directional refrigerant pipe make installation much easier. And the neat fit with walls and ceilings assures more installation flexibility.

# VRF Smart Connectivity+

Through energy management, Panasonic's VRF Smart Connectivity+ is a completely new, state-of-the-art solution providing energy saving and comfort as well as simple installation. operation, and running.

Dramatic reduction of OpEx with outstanding IAQ. 3 built-in sensors: Temperature, RH and occupancy. ZigBee wireless sensors: CO<sub>2</sub> / temperature / RH%, window / door, ceiling / wall / water leakage. Relay Pack, Hotel Room Controller.

User-/owner-friendly. Color touch screen. Simple and easy to use. 22 languages. Easy-to-understand error description.

Ultimate customization. Customisable colour background. Custom display/icons, messages. Programmable logic (also stand alone). Various controls and various external connection devices.

Easy design and Plug & Play to reduce CapEx. Simple Plug & Play VRF connection to Building Energy Management System (BEMS). Stand alone or BEMS connected. Easy installation of ZigBee sensors. VRF Smart Connectivity+ offers efficient energy management and a new air conditioning control solution with high IAQ (indoor air quality).

Energy management system for rooms.

Each room is monitored by high-precision sensors, making it possible to make every room's temperature comfortable without wasting energy.

### 1 Quality air control

Optimum IAQ is realized using the  $CO_2$  and humidity sensors. The interior environment remains comfortable, while heating and cooling costs are minimized. The  $CO_2$  sensor can control ventilation systems, which contribute to improving the room's air quality.

### 2 Easy installation and integration

A remote controller is all that's required for occupancy control and optimum automatic indoor air quality (IAQ) control. Simple operation with a rented interface further contributes to increased energy efficiency and productivity for reduced capital expenditure (CapEx) and operating expense (OpEx).

### 3 Other equipment control

One room controller manages various devices including lighting and the blinds. A ventilation system and other external connection devices can be connected by using HRC or SE8350 so that various control is possible with this controller alone, even without BMS.

Door/window sensor. Door and window contact detection sensor to monitor opening and closing.

sensor. Wall and ceiling sensor to detect the presence or absence of occupants.

Water leakage sensor. Two sensing pads under the body activate when water is present between the two pads. Detecting the water, the sensor reports the event to the controller (and BEMS).

S.

Management system for the entire building.

A Building Energy Management System (BEMS) can also be connected for Plug & Play centralised control of the building's entire energy consumption.

Wall/ceiling motion/temperature/humidity

CO<sub>2</sub> /temperature/humidity sensor. Monitor indoor air quality, review data on interfacing devices, and control fresh air inside customizable zones.

#### Hotel Room Controller (HRC).

The Hotel Room Controller controls connected guest room devices and aggregates data, making it visible to guest room and property management systems.

### Energy management system for rooms

By installing a wall/ceiling motion temperature sensor, window/door sensor, and CO<sub>2</sub> sensor in the room, ideal, waste-free air conditioning is achieved.

#### Sensing and control technology

Using sensors from Schneider Electric, high-quality occupancy control and automatic IAQ control are realized. The sensors detect the presence or absence of occupants, and the opening and closing of doors and windows to achieve the most efficient energy management for exceptional air-conditioned comfort.

Flexible installation is possible to match different applications and building features such as walls, ceilings and proximity to doors and windows. No wiring means extra installation versatility.

Batteries last for up to five years (10-year battery for CO<sub>2</sub> sensor) and are easy to install and replace.

 Window sensor (option).
 Room controller. 3 | Ceiling motion sensor (option). 4 | Door sensor (option). 5 | CO<sub>2</sub> sensor (option). 6 | Water leakage sensor (option).

Up to 5 years battery life (batteries included). Battery life of CO<sub>2</sub> sensor up to 10 years. Battery level data point.

### Smart management solutions

### Innovative and unrivalled advantages

Color and design to match office interiors. Color combinations and design can be set to match different facilities

Easy-to-understand error description. Error description during an emergency is easy to understand, enabling staff to respond guickly.

#### 1 Hotels

Room key card or key cardless solutions for hotels. The SER8150 and ZigBee sensor automatic detection function offer optimal air conditioning regardless of whether there is a hotel room key or not. Sensors detect the presence or absence of occupants and the opening and closing of doors and windows for the optimum airconditioned environment guests expect. Automatic control ensures the most efficient operation when guests are away or when windows are open. This contributes to an appreciable reduction in operation costs.

#### 2 Small and medium offices

CO<sub>2</sub> sensors (optional) and humidity sensors. The CO<sub>2</sub> sensors (optional) take measurements in units of ppm, and humidity sensors enable fine air quality control. This creates the most comfortable space for occupants while contributing to improved employee satisfaction.

#### <sup>3</sup> Supermarkets

Humidity sensors.

These humidity sensors enable automatic dehumidification for the optimum IAQ regardless of climatic conditions. This creates an even more comfortable environment for customers, employees, and products themselves.

Customization in 22 languages possible. The display can be customized to match the native languages of guests to enable smooth, stress-free communication for hospitality at its finest.

Programmable logic. Full customization of remote controller logic possible, and updating to match conditions.

#### FSV SYSTEM EXAMPLE

NOTE: Connectable number of controllers, controller combination, connectable indoor units, remote control maximum wiring lengh are different between the controller. Please confirm the installation instructions of controller or consult with Panasonic Service Center.

(1) Group control

#### Timer remote controller (CZ-RTC4)

Dimensions H 120 x W 120 x D 20 mm

#### Basic remote controller ON/OFF

- Operation mode changeover
- (Cooling, Heating, Dry, Auto, Fan). • Temperature setting
- (Cooling/Dry: 18-30 deg Heating: 16-30 deg).
- Fan speed setting H/ M/ L and Auto.
- Air flow direction adjustment.
- ECONAVI on/ off\*

#### Time Function 24 hours real time clock

• Day of the week indicator.

#### Weekly Program Function

• A maximum of 6 settings/day and 42 settings/week can be programmed.

#### **Outing Function**

• This function can prevent the room temperature from dropping or rising when the occupants are out for a long time.

#### **Sleeping Function**

• This function controls the room temperature for comfortable sleeping.

#### A maximum of 8 indoor units can be controlled from one remote controller

#### Remote control by main remote controller and sub controller is possible

Max. 2 remote controllers (main remote controller and sub controller) can be installed for one indoor unit. \* Depending on the model, some menus cannot be used.

#### Wireless remote controller

#### Remote control by main remote controller and sub controller is possible

• Max. 2 remote controllers (main remote controller and sub controller) can be installed for one indoor unit.

#### When CZ-RWS3 is used, wireless control becomes possible for all indoor units

- When a separate receiver is set up in a different room, control from that room also becomes possible.
- Automatic operation by means of the emergency operation button is possible even when the remote controller has been lost or the batteries have been exhausted.

In addition, there are other functions such as temperature setting, operation switching, airflow direction/fan speed setting, etc

#### Ventilation independent operation is possible

When commercial ventilation fans or heat-exchange ventilation fans have been installed, they can be operated with this remote control (interlocked operation with the indoor unit or independent ventilation ON/OFF).

## **Timer Operation**

#### Schedule timer (CZ-ESWC2)

 $\cdot$  By setting holidays or operation stop within one week, the timer can be paused just for that week. · All timer settings can be stopped with the timer "ON/OFF effective" button. (Return to timer operation is made by pressing the button again.)

Up to 64 groups (maximum 64 indoor units) can be controlled divided into 8 timer groups

Dimensions H 120 x W 120 x D 16 mm

- Six program operations (Operation/Stop/ Local permission/ Local prohibition) per day can be set in a program for one week
- · Only operation or stop, remote controller local permission or remote controller local prohibition, and their respective combinations are possible. (Operation + local permission, stop + local prohibition, only local permission, etc.) Local prohibition and the combination of the three items of temperature setting, mode change, and operation/stop can be set at the time of installation.

Connection example 1 (POWER SUPPLY FROM THE INDOOR UNIT)

Connection example 2 (POWER SUPPLY FROM THE SYSTEM CONTROLLER AND ON/OFF CONTROLLER)

#### • A function for pausing the timer in case of national holidays has been added, and timer operation also can be stopped for a long time

The power supply for the schedule timer is taken from one of the

1. Control circuit board (T10) of a nearby indoor unit (power supply wiring length: within 200m from the indoor unit). 2. System controller (power supply wiring length: within 100 m from the indoor unit).

When the power supply for the schedule timer is taken from the control circuit board of the indoor unit, that indoor unit cannot be used with other control devices using the T10 terminal.

As operation mode and temperature settings are not possible with the schedule timer, it must be used together with a remote controller, a system controller, an intelligent controller, etc. Also, as it does not have an address setting function, the control function of a system controller, etc., must be used for address setting.

Schedule

### **Centralized Control Systems**

#### System controller (CZ-64ESMC3)

Dimensions H 120 x W 120 x D 16 + 52 (embedding dimension mm)

#### Power supply: AC 100 to 240 V I/O part: Remote input part (effective voltage:DC24V) All operation,All stop,Demand 1,Demand 2 Remote output part (non voltage contact) Operation, Alarm (external power supply within DC 30V, max 0.5A) Total wiring length : 1 km

Individual control is possible for maximum 64 groups, 64 indoor units.

- Control of 64 indoor units divided into 4 zones. (One zone can have up to 16 groups, and one group can have up to 8 units.)
- Control is possible for ON/OFF, operation mode, fan speed, air flow direction, operation monitoring, alarm monitoring, ventilation, remote controller local operation prohibition, etc.

Prohibition setting for Remote controller operation

	-		-		
Setting mode	ON/OFF	Mode	Temperature	Fan speed	Flap
Permit					
Prohibit 1	-				
Prohibit 2	-	_	_		
Prohibit 3		_	_		
Prohibit 4		_			

In case of joint use with a wireless remote controller, there are limitations for the control mode. Please use only with setting "Permit" and "Prohibit1 (prohibition for ON/OFF)".

\*Contents for Prohibit 1~4 can be modified.

Operation from the remote controller is possible.
 Operation from the remote controller is prohibited.

#### · Joint use with a remote controller, an intelligent controller, etc. is possible

(The maximum number of connectable system controllers is 10, including other central controllers on the same circuit.) (In case of joint use with a wireless remote controller, there are limitations for the control mode. Please use only with setting "Permit" and "Prohibit1 (prohibition for ON/OFF)".)

 Control of systems without a remote controller and of main/sub systems (a total of up to 2 units) is possible

#### • Weekly timer function

• 8 programs per day (with ON/OFF/Mode/Temperature/Central control setting items) for 1week (7days) can be set.

• Special holiday setting can ignore the timer operation temporary by keeping original timer setting. (Special holiday setting can be removed by same setting display.)

#### • 5 types of Energy Saving function

Set temperature automatic return / Set temperature range limitation / Off remind / Off timer operation / Demand control timer

#### • A control mode corresponding to the use condition can be selected from 10 patterns

Contro

unit numbe

mode

A : Operation mode: Central control mode or remote control mode can be selected Central control mode: The system controller is used as centralized

control device. (Setting from a remote controller can be prohibited by prohibiting local operation from the system controller.) Remote control mode: The system controller is used as a remote controller. (Setting from the system controller can be prohibited by prohibiting local operation from another central control unit.)

B : Controlled unit number mode: All mode or zone 1, 2, 3, 4 mode can be selected

All mode: All, zone, or group unit can be selected. Zone 1, 2, 3, 4 mode: Setting is possible only for the indoor units of zone 1, 2, 3, or 4.

#### **ON/OFF controller (CZ-ANC3)**

Dimensions H 121 x W 122 x D 14 + 52 (embedding dimension mm)

Power supply: AC 100 to 240 V I/O part: Remote input (effective voltage: within DC 24 V): All ON/OFF Remote output (allowable voltage: within DC 30 V): All ON, All alarm

- 16 groups of indoor units can be controlled.
- Collective control and individual group (unit) control can also be performed.
- Up to 8 ON/OFF controller (4 main, 4 sub) can be installed in one link system.
- The operation status can be determined immediately.

ction example					
		A Operat	A Operation mode

	Zone 4 mode	Zone 4 central control	Zone 4 remote control Example 5		

performed. e link system.

#### Intelligent controller (CZ-256ESMC3)

H 240 x W 280 x D 85 mm Power supply AC 100 to 240 V (50/60 Hz) LCD: 10.4 in. TFT, XGA(1024 x 768), LED backlight

#### **Product Features**

- 10.4 in., Large, easy-to-use color LCD
- With smartphone-like operations, such as swiping and flicking
- Enhanced energy-saving control functions
- Packed with demand functions
- Set temperature auto return settings, Auto shutoff, Set temperature range limit settings
- Energy Visualization
- Displays electricity & gas usage distribution
- Supports energy-saving plans with graph display function

#### **New Features**

- Max 256 indoor unit [4 links x 64 units] can be controlled. In case of three or more systems [more than 128 units], a communication adaptor CZ-CFUNC2 must be installed for three or more links.
- Operation is possible as batch, in zone units, and in group units.
- ON/OFF, operation mode setting, temperature setting, for fan speed setting, air flow direction setting (when used without a remote controller) and remote controller local operation prohibition [prohibition 1,2,3,4] can be done.
- Graph display [trends, comparisons]
- ECONAVI ON/OFF

 Limitation contents for prohibited operation

Prohibition means limitation of the operation contents from the remote controller. It is also possible to change the prohibition items.

#### Limitation contents (Limitations can be user defined)

- There is no limitation for the operation of the remote Individual controller. However, the contents will be changed to the contents of the controller operated last. (Lastpressed priority.)
- Prohibition 1 The remote controller cannot be used for ON/OFF. (All other operations are possible from the remote controller)
- Prohibition 2 The remote controller cannot be used for ON/OFF, operation mode change and temperature setting. (All other operations are possible from the remote controller.)
- Prohibition 3 The remote controller cannot be used for operation mode change and temperature setting. (All other operations are possible from the remote controller.)
- Prohibition 4 The remote controller cannot be used for operation mode change. (All other operations are possible from the remote controller.)

#### Remote Control

The LAN terminal on this unit enables you to connect it to a network. Connecting to internet will enable you to operate the unit and check the status using a PC from remote location.

Operation/Status			I/D unit list 08/08/2016(MON) 02:			02.59PM	59PM 쑵

	В	Adp1-1 In01	ÓN	Cool	64	32	-	-		

Display image on the remote PC is same design as the controller unit.

#### Communication adaptor (CZ-CFUNC2)

\* Required when more than 129 indoor units are connected.

### Panasonic Total Air Conditioning Management System P-AIMS

#### P-AIMS Basic software / CZ-CSWKC2

#### Up to 1,024 indoor units can be controlled by one PC

#### Functions of basic software

- Standard remote control for all indoor units
- Many timer schedule programs can be set on the calender
- Detailed information display for alarms
- CSV file output with alarm history, operating status.
- Automatic data backup to HDD

basic software can be upgraded to suit individual requirements

Panasonic P-AIMS

Air Conditioning Intelligent Menage

The P-AIMS is ideal for large areas/buildings such as shopping centers, universities and office buildings. Each line can have max.8C/A units, and control max.512 units. In total, 1,024 indoor units can be controlled by 1 "P-AIMS" PC.

#### P-AIMS optional software CZ-CSWAC2 for Load distribution

#### Load distribution calculation for each tenant

- Air-conditioner load distribution ratio is calculated for each unit (tenant) with used energy consumption data (m3, kWh).
- Calculated data is stored with CSV type file.
- Data of last 365 days is stored

#### P-AIMS optional software CZ-CSWWC2 for Web application

#### Web access & control from remote station

- Accessing P-AIMS software from remote PC.
- You can monitor/operate FSV systems by using Web browser (Internet Explorer).

#### P-AIMS optional software CZ-CSWGC2 for Object layout display

#### Whole system can be controlled visually

- Operating status monitor is available on the layout display.
- Object's layout and indoor unit's location can be checked at once.
- Each unit can be controlled by virtual remote controller on the display.
- Max 4 layout screens are shown at once.

#### P-AIMS optional software CZ-CSWBC2 for BACnet software interface

#### Connectable to BMS system

- Can communicate with other equipment by BACnet protocol.
- FSV systems can be controlled by both BMS and P-AIMS.
- Max 255 indoor units can be connected to 1 PC (that has P-AIMS basic & BACnet software).

## T10 Terminal for External Control (Digital Connection)

Connecting an FSV indoor unit to an external device is easy. The T10 Terminal featured in the electronic circuit board of all indoor units enables digital connection to external devices.

#### 1. T10 Terminal Specification (T10:CN061 at indoor unit PCB)

NOTE: The wire length from indoor unit to the Relay must be within 2.0m. Pulse signal changeable to static with JP cutting. (Refer to JP001)

#### 2. Usage Example

#### Forced OFF control

#### Condition

1-2 (Static input): Close/ Operation with Remote is permitted. (Normal condition) Open/ Unit is forcibly OFF and Remote controller operation is prohibited

#### • Example of wiring

NOTE: The wire length from indoor unit to the Relay must be within 2.0m

- Temperature setting and measuring of the indoor suction temperature can be performed from central monitoring.
- The analog input for temperature setting is 0 to 10 V, or 0 to 140 Ohm.
- Power is supplied from the T10 terminal of the indoor units.
- Separate power supply also is possible (in case of suction temperature measuring).

#### Interface adaptor (CZ-CAPC3)

 Control and status monitoring is possible for individual indoor unit (or any external electrical device up to 250 V AC, 10 A) by contact signal.

Seri-Para I/O unit for outdoor unit (CZ-CAPDC2)

Dimensions	H 80 x W 290 x D 260 mm	
Power supply	Single phase 110-120/220-240 V (50/60 Hz), 18 W	
Input	Batch operation/Batch stop (non-voltage contact/DC 24 V,	
	pulse signal). Cooling/Heating (non-voltage contact/static	•
	signal). Demand 1/2 (non-voltage contact/static signal) (Local	
	stop by switching)	
Output	Operation output (non-voltage contact). Alarm output	
	(non-voltage contact)	
Wiring length	Indoor/Outdoor operation lines: Total length 1 km.	
	Digital signal: 100 m or shorter	

- From the centre control device, mode changing,

- and batch operation.
- operation/batch stop are possible.

4-5 (Static output): 12V output during the unit ON / No output at OFF Central control

Indoor unit control PCB

# **VRF** Renewal

An important drive to further reduce the potential damage to our ozone

**RENEWAL** R22 is a HCFC and classified as an ozone depleting substance banned under the Montreal Protocol. Many existing R22 VRF Systems will need to be replaced over the coming years by more modern and efficient R410A VRF Systems.

#### Panasonic takes proactive action to switch to R410A refrigerant

Recognising consumers' anxiety and financial difficulties to adapt to the new R22 regulations, Panasonic developed a new cost-effective and simple solution to switch to R410A refrigerant.

#### What is Panasonic VRF Renewal?

Panasonic VRF Renewal enables reuse of good quality existing R22 pipe work to be installed with a new high efficiency R410A system.

#### What's so unique about Panasonic's solution?

By enabling reuse of existing R22 piping, consumers get to save substantially from reduced installation cost, and without any sacrifices to warranty or performance.

R22	HCFCs	0.055			
R410A	HFC	0			
R407C	HFC	0			
P22 The reduction of C	22 The reduction of Chloring critical for a cleaner future				

R22 - The reduction of Chlorine critical for a cleaner future

Before renewing piping, be sure to contact an authorized Panasonic dealer for advice.

#### **VRF** Renewal

Panasonic's Renewal system allows a completely new VRF system, indoor and outdoor units, to be installed using the existing systems pipe work. Panasonic's advanced technology enables the system to work with previously installed pipe work by managing the working pressure within the system down to R22 (3.3 bar) levels. This ensures the system works safely and efficiently without loss of capacity.

The new equipment has potential to increase COP/EER by using state of the art inverter compressor and heat exchanger technology.

Having contacted your Panasonic supplier regarding pipe work restrictions and gained approval to use the Panasonic Renewal System there are three main tests that have to be carried out to ensure that the system can be used effectively.

Firstly, a thorough inspection of the pipe work must be carried out and any damage must be repaired. Secondly, an oil test has to be carried out to ensure that the system has not been subject to a compressor burnout during its lifetime.

Lastly, a VRF Renewal Kit (CZ-SLK2) has to be installed within the pipe work to ensure that the system is cleaned of any oil residue.

#### VRF Renewal Kit (CZ-SLK2) and Sight Glass

The following shows an overview of the VRF Renewal Kit (CZ-SLK2) that is required when existing tubing is reused. If the exact tube length and tube size of the existing tubing are uncertain, attach a sight glass in accordance with the figure below. It will be used for checking the amount of additional refrigerant charge.

#### Attaching the Renewal Kit and sight glass

- To adjust the limited pressure level into 3.3 MPa, special setting is necessary on site.
- A filter drier shall be attached to the liquid tubing of each outdoor unit. . Do not need to remove Renewal Kit after a test run is performed as it can be retained for normal operation
- When attaching Renewal Kit, be extra careful with regards to installation location and orientation of the filter drier and ball valve. Any mistakes will complicate maintenance work.
- Thermal insulation material (field supply: heat resistance of 80°C or higher and thickness of 10 mm or greater) shall be applied to the Renewall Kit.
- The filter drier of the Renewal Kit may need to be replaced depending on the condition of the existing unit. Use a Danfoss DMB 164 as the replacement filter drier (field supply).

Connecting tube dimensions (Inch mm) A Ø 1/2 (12.7) (12,14,16 HP) B Ø 3/8 (9.52) (8,10 HP)

Note: If the tube size does not match that of the existing tubing, use a reducer (field supply) to adjust the tube diameter

#### Sight glass (field supply)

If the exact tube length and tube size of the existing tubing are uncertain, attach a sight glass to the liquid tubing, and use it to check whether there is an appropriate amount of additional refrigerant charge.

VRF Renewal Kit (CZ-SLK2)

## **Procedure for VRF Renewal**

# **A Globally Trusted Air Conditioning Brand**

With roots going back 60 years, the Panasonic Air Conditioning Business Division has grown to become a multinational company recognized around the world. Driven by a never-ending quest for product innovation, the group has evolved from manufacturing compressors to providing comprehensive air conditioning solutions. Panasonic has become a brand that people trust to deliver products with superior quality and reliability.

**Panasonic's** persistent innovation spurs the evolution of air conditioning solutions.

Starts production of absorption chillers

> Introduces first GHP (gas heat pump) VRF air conditioner

### 1957

Start of the Home Cooler business

### 1958

- Panasonic (using the National brand) introduces its first Home Cooler, a window-type air conditioner model
- Electrical Appliance Business Group (Kadoma) starts manufacture of Home Coolers

Sales of Home Coolers begin

### 1961

 Starts exports of Home Coolers to South Vietnam

#### 1965

I aunches Boom Coolers

- Begins development of rotary compressors The high efficiency and guality of these compressors draw interest from domestic and overseas air conditioner manufacturers
- External sales begin

### 1969

 Begins production at the Kusatsu Factory in Shiga Prefecture, Japan

- MAICO, the Division's first overseas manufacturing base, established in Malaysia Begins operating twin-based system
- in Japan and Malaysia

1972

### 1983

- Launches inverter air conditioners
- Starts sale of Panasonic's first inverter air conditioners

### 1985

 Begins development of scroll compressors

### 1990

· Launches world's first air conditioner equipped with compact scroll compressor

### 1993

- Establishes Matsushita-Wanbao (Guangzhou) Air Conditioner (MWAC)
- Establishes Matsushita-Wanbao (Guangzhou) Compressor (MWCC)
- Establishes Matsushita Air Conditioner Engineering (Matsushita ACE)

#### 2003

Launches automatic filter-cleaning function for air conditioners (AC robot)

1985

- Debuts guiet, lightweight, compact EcoCute systems with improved energy-saving technology
- EcoCute adopts highly efficient, accumulator-less CO<sub>2</sub> scroll compressor
- CO<sub>2</sub> heat-pump hot water heater (Eco Cute) uses non-toxic, non-
- combustible natural refrigerant (CO2) in place of freon, to reduce environmental impact
- · Begins production of new energysaving mini-VRF series multi-split packaged air conditioners for residential use

### 2005

 Panasonic products become extremely successful in Japan's air conditioner market as innovations such as airstream robots and motion sensors help grow Panasonic's market share

1995

 Establishes commercial air conditioner sales company in China (PAPAECN)

### 2019

- Name changes to Heating and **Cooling Solutions Business Division**
- Panasonic and Systemair announce development of integrated HVAC&R and ventilation solutions
- Panasonic and Welcome Air Tech's SAIVER announce development of connected air handling and VRF solution for Southeast Asia

### 2021

- R32 mini-VRF launches in Europe
- Heating & Ventilation A/C Company is established

### 2022

 nanoe<sup>™</sup> X Generator Mark 3 (100 x) is introduced

# **Reliability and Durability**

At Panasonic, we believe that the best air conditioner is one that works quietly and effectively in the background whilst minimizing its impact on the environment. People who use our products can look forward to long years of high-quality performance without the need for constant maintenance. As part of our rigorous design and development process, Panasonic air conditioners undergo a variety of stringent tests to ensure their effectiveness and long-term reliability. Tests for durability, waterproofing, shock resistance, and noise are conducted on component parts or on the finished products themselves.

As a result of all of these painstaking efforts, Panasonic air conditioners meet even the most demanding industrial standards and regulations in every country where they are sold.

Applying advanced technologies that truly make life better, we live by an unparalleled commitment to product quality. Our approach to product development originates in the DNA of Japanese craftsmanship.

Panasonic is building on the Japanese tradition of uncompromising quality control worldwide, developing and manufacturing fine products and delivering them to customers everywhere.

## **Durability**

At Panasonic, we know the importance of a long service life with minimal maintenance. That's why we subject our air conditioners to a wide range of stringent durability tests.

Long-Term Durability Test

To ensure durability and stable operation for many years, we conduct a longterm continuous operation test under conditions that are much more severe than actual operating conditions.

**Compressor Reliability Test** After the continuous operation test, we remove the compressor from a selected outdoor unit, disassemble it, and examine waterproof specifications. Contact the internal mechanisms and parts for

long-term performance under harsh

conditions.

Waterproofing Test

The outdoor unit, which is subject

to rain and wind, complies with IPX4 sections on printed circuit boards are potential failure. This helps ensure reliable resin-potted to prevent adverse effects caused by exposure to water (an unlikely occurrence).

## **International Standard Quality**

To uphold the company's reputation around the world, Panasonic strives continuously to offer the highest quality with the lowest possible environment impact.

resin material used in a propeller fan is nfirmed by a tension test

#### **Reliable Parts That Meet or** Exceed Industrial Standards

In every country where they are sold, Panasonic air conditioners comply with all required industrial standards and regulations. In addition, Panasonic conducts stringent testing to ensure the reliability of parts and materials.

**RoHS / REACH Compliant Parts** All Panasonic parts and materials comply

with Europe's strict RoHS/REACH environmental regulations. During the development and production of parts. stringent inspections are conducted on over 100 materials to ensure that no hazardous substances are included.

Testing laboratory Panasonic Gunma, Japan (PAPARS)

#### Sophisticated **Production Process**

Panasonic's air conditioner production lines employ state-of-the-art factory automation technologies to ensure products are manufactured efficiently and with uniformly high levels of quality and reliability.

# **Global Networking of Heating and Cooling Solutions**

In any indoor environment, eco-friendly air conditioning plays a vital role in maintaining our health, comfort, and productivity. Whether it's an office, a hotel, or a shopping mall, every building matters. That's why Panasonic has developed energy-efficient large-scale heating and cooling solutions to suit a variety of business applications. As one of the pillars of Panasonic's BtoB operations, our heating and cooling sector provides comprehensive solutions to businesses around the world. Harnessing our advanced technology and extensive on-site expertise, we serve clients in a diverse range of environments throughout the world.

Panasonic Air Conditioning Solutions are designed from the ground up to meet the specific needs of each location, whilst placing a premium on efficiency and reliability. At every stage, we seek to make optimal use of resources and energy to create solutions that benefit the environment.

#### **PACT Training Facilities**

The 42 Panasonic Air Conditioning Training Centers (PACTs) around the world provide a wide range of support for Panasonic's business-use air conditioning systems. PACT represents Panasonic's unwavering commitment to our sales partners, distributors, and service teams in Europe, Asia, Oceania, and the Americas.

#### **Quality Assurance from Japan to the World**

With a diverse network of production and R&D facilities, Panasonic delivers innovative products incorporating cutting-edge technologies that set the standard for air conditioners worldwide. As our business expands globally, we strive to transcend borders with our superior-quality products.
