Panasonic Corporation
Quality & Environment
Division

Handling of substances without CAS numbers

- ◆ When the following condition is met, the substance is listed with a SN number added to the substance (group). (“SN” + 4-digit number)
[Condition]
 - Substances with no CAS number due to the reasons such as substance group, unidentified structures, and new substance.
 - When the substance can be used,
 - a. When the corresponding substance is not found on the search list even though it applies to the management subject standard,
 - b. When the obtained information is for the substance group and cannot be reported for individual substances,
 - c. When the chemical cannot be identified even though its existence is confirmed,
 - d. When the composition data on individual substance level needs to be kept secret as confidential information for the company, which is a drug manufacturer and so forth,
 - When the substance cannot be used,
 - (1) When the substance applies to SVHC in REACH directive (as the substance cannot be identified),
 - (2) Chemicals under regulation on the content or use by the chemical name (CAS No.)
- * For the list of substances assigned with specific SN numbers, please see “Appendix List of substances added with distinctive numbers” which is found on the final page of “chemSHERPA management subject substances Ver*.**.**. instruction manual,” which is downloaded along with the Tool.

Precautions for preparation of chemSHERPA-AI by using prepared data

- When loading a chemSHERPA-AI or AIS prepared in the old version with reference to the management subject substances in the past by using “Compounding” and “Cite prepared data” functions, **please be sure to update the content information so that it is based on the latest management subject substance data.**

Specifically,

- [1] Check the substances (group) added on JMAP website,
- [2] Check if they are contained in the product, and
- [3] Add to chemSHERPA-AI if they are contained.

This section is now complete.
